Test results of an ecal-layer with embedded electronics

Wednesday, 29 May 2013 09:00 (20 minutes)

Scintilator strip ECAL is one of the candidate of ILD calorimeter. Since we need to thin down ECAL without deteriorating the performance, we constructed an EBU which is embedded readout electronics as a technological prototype of a strip scintillator ecal. We have tested the performance both with high energy electron beams and LED system.
