

SiW ECAL optimisation studies

Tuesday, 28 May 2013 15:40 (20 minutes)

We will report on the results of simulation-based optimisation studies of the silicon-tungsten ECAL for ILD. We have investigated the effects of silicon sensor design, the thickness of PCB detector elements and dead detector pixels on the measurement of jets.

Presenters: Ms KOZAKAI, Chihiro (University of Tokyo); KOZAKAI, Chihiro (University of Tokyo)

Session Classification: Calorimetry, Muons
