

Module Size

by Ron Settles MPI
...a few comments

- The present module size at the LP was determined by Dan so that the LP fits in the magnet and the tracks 'see' 3 modules.
- After some discussion, we decided to make the module size for the LCTPC the same as that for the LP, since that is the size we have experience with. However this has never been a final decision about the module size for the LCTPC.
- Recent suggestions about increasing the size (edge effects, handling, etc) also have disadvantages (if too large, Gem gate may not be possible, more channels may cause more problems, etc)
- Anyway, Dan has already considered larger modules...
