

# Mokka Study

C. Calancha  
Regular Friday Meeting

January 30, 2015

## ilcdirac productions validation

- I want to isolate differences coming just from: using/not using ilcdirac.
- As reported before (Sudo san and me): we found some issues in Mokka concerning reproductibility.
- I've been looking that in more detail.

## Steering file unstabilities

- The format of steering file could affect output.
  - Even comments lines could have effect!.
  - ilcdirac insert several comment lines (each time it modifies one steering parameter).
- Need to separate this effect from others.
- I keep debugging this issue (**Work in Progress**).

# Are you really a comment?

## The length of one comment line affect simulation!

```
[calancha@ccw09 steer]$ diff mokka_6.steer mokka_7.steer
56c56
< # hello world
---
> # To be a comment or not to be a comment
64c64
< /Mokka/init/lcioFilename out/out_6.slcio
---
> /Mokka/init/lcioFilename out/out_7.slcio
```

## Same software version used to sim/rec

- First 2 events no difference.
- Since the 3rd event, we see differences in the event collections.
- Previous Diff. in the steer file are the only differences
  - same input stdhep, soft versions.

# Event 0 (Same)

# Event 0 (Same)

```
