

Minutes of WP-meeting 247

Attendance:

DESY: Ralf Diener, Ulrich Einhaus, Oleksiy Fedorchuk, Leif Jönsson, Claus Kleinwort, Paul Malek, Joseph Hansen-Shearer

Vidyo: Madhu Dixit, Jochen Kaminski, Ron Settles, Jan Timmermans

General News:

The Z-pole running was discussed again shortly, but since neither Paul or Akira were participating, which are the tracking convenors of ILD and mostly responsible for the summary, the subject was adjourned until the next meeting.

PCMAG/LP setup, test beam:

Ralf: no new on the test beam area – everything should be ready for the upcoming test beams

News from the groups:

Paul: The preparations of the next beam are continuing, The GEM foils are delivered and the PCB and frames are expected to come in the next 2 weeks. There is enough time left to build and test the detectors.

DESY has three summer students: - One student is checking the uniformity of the framed GEMs and compares the gain measurements with the simulation results taking into account the flatness information. The second student is studying the oxydization of GEM by comparing their gain before and after oxidizing a GEM. The third student is doing some simulation for the Timepix readout of a GEM+pad plane.

AOB:

The next workpackage meeting will take place on August 25th.
