

STUDY OF CHARGED HIGGS BOSONS SEARCH AT THE ILC FOR A COLLISION ENERGY OF 1 TEV

Academic advisors: Professor Hitoshi Yamamoto (Tohoku Uni.)
Professor Arno Straessner (TU Dresden)

Overview

- $m_{H^\pm} = 350 \text{ GeV}$
- $e^+e^- \rightarrow H^+H^- \rightarrow tb \, tb \rightarrow Wbb \, Wbb \xrightarrow{W \rightarrow 2 \text{ jets}} 8 \text{ jets (hadronic)}$

In average 1.7 beam background events per bunch crossing

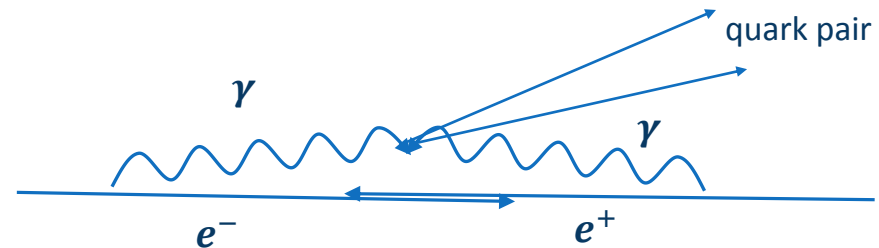

Has major influence on jet clustering

Use kt-algorithm from fastjet package to reduce background

–R: Generalized radius of jets

–Vary R to optimal mass resolution

Use Satoru Jetfinder for clustering

Fastjet Finder – kt Algorithm (beam background removal)

- Calculate the distance between to all tracks

$$d_{ij} = \min(p_{Ti}^2, p_{Tj}^2) \frac{\Delta R_{ij}}{R}$$

with $\Delta R_{ij} = (\eta_i - \eta_j)^2 + (\phi_i - \phi_j)^2$

η pseudo rapidity, ϕ azimuth

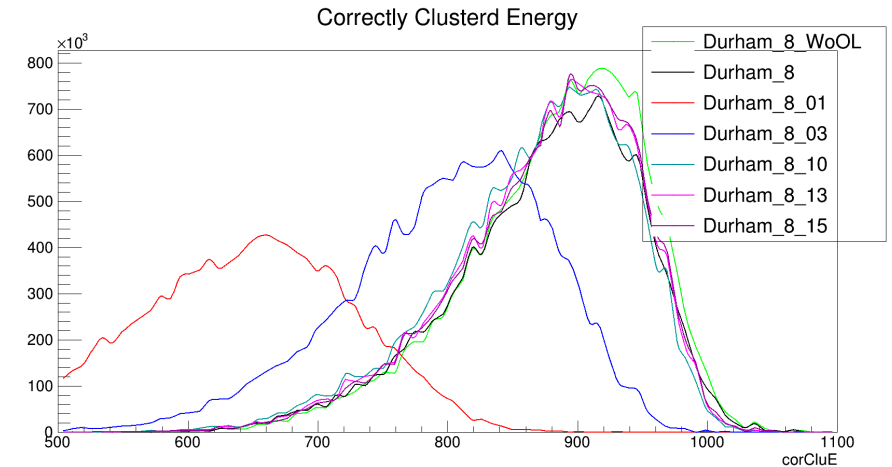

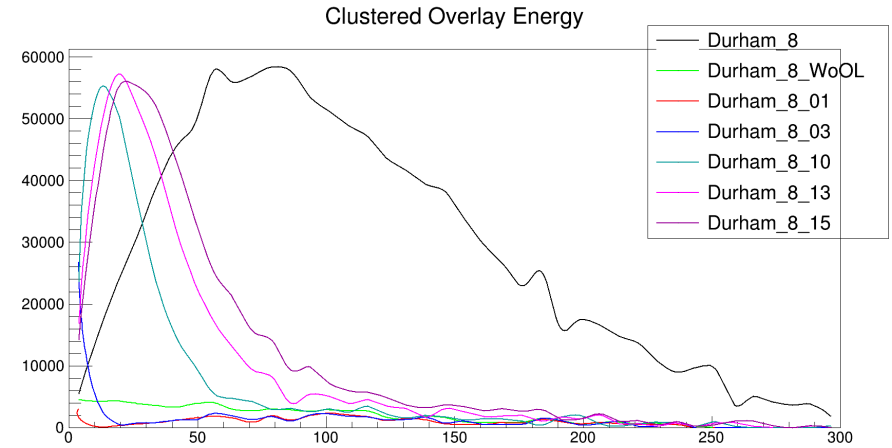

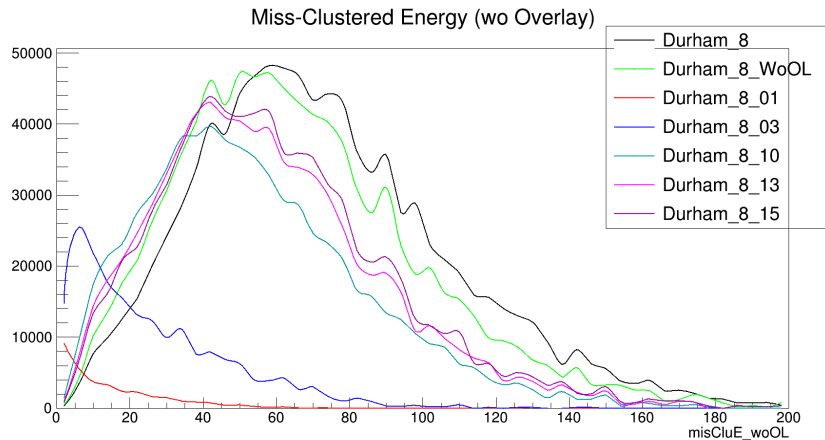

- Find smallest d_{ij}
- If $d_{ij} < d_{iB} = p_{Ti}^2$ merge tracks, if not remove Track (B: Beam)
 - Remove particles that are closer to the beam than to the closest track
- Continue to step one until there are only the requested number of jets

Choose R for kt algorithm

Durham_8: w/o correction

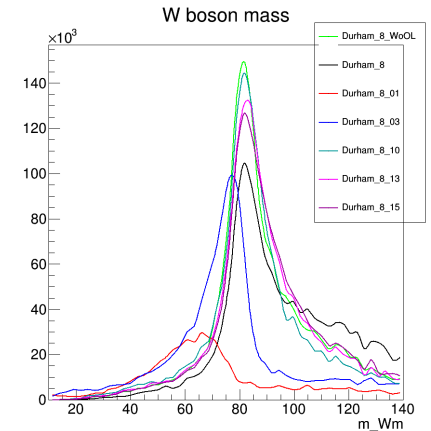

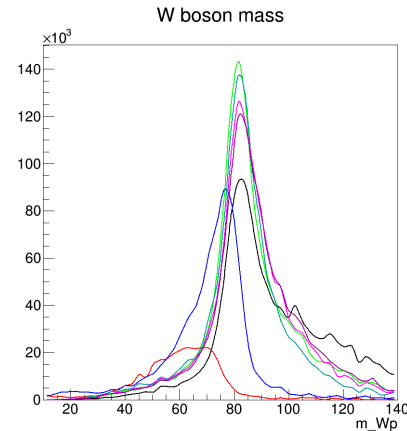

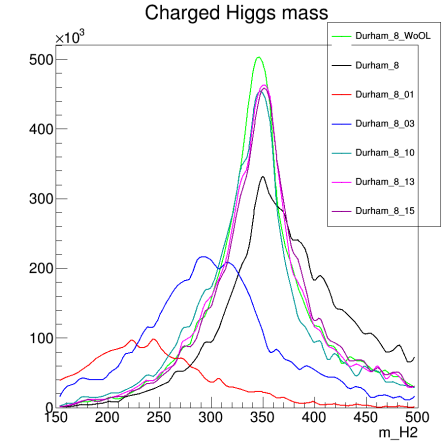

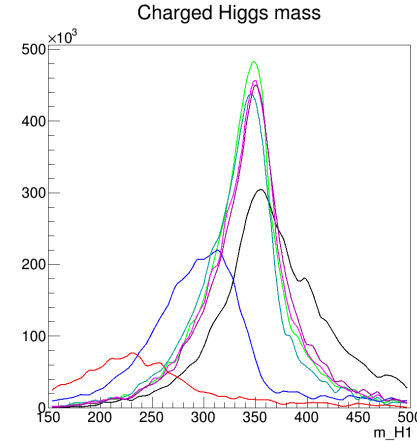

Durham_8_WoOL: overlay removed
by generator information

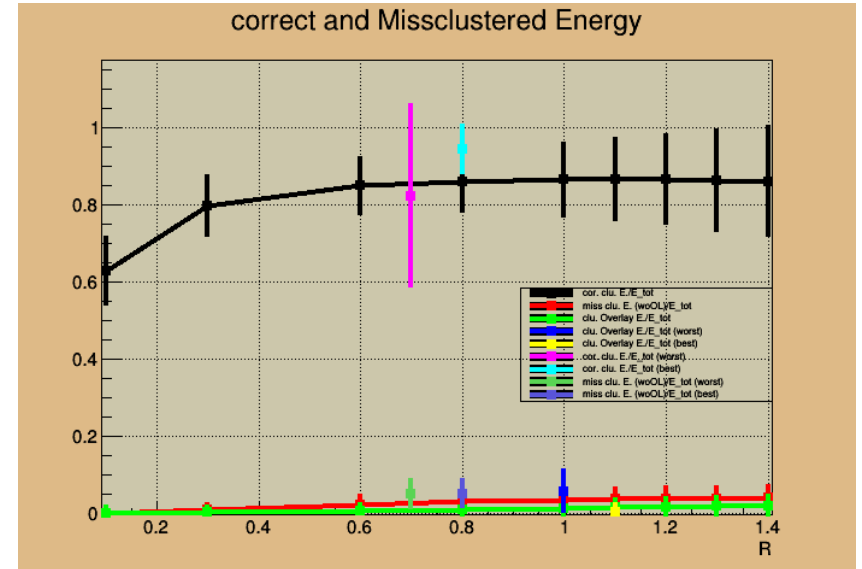

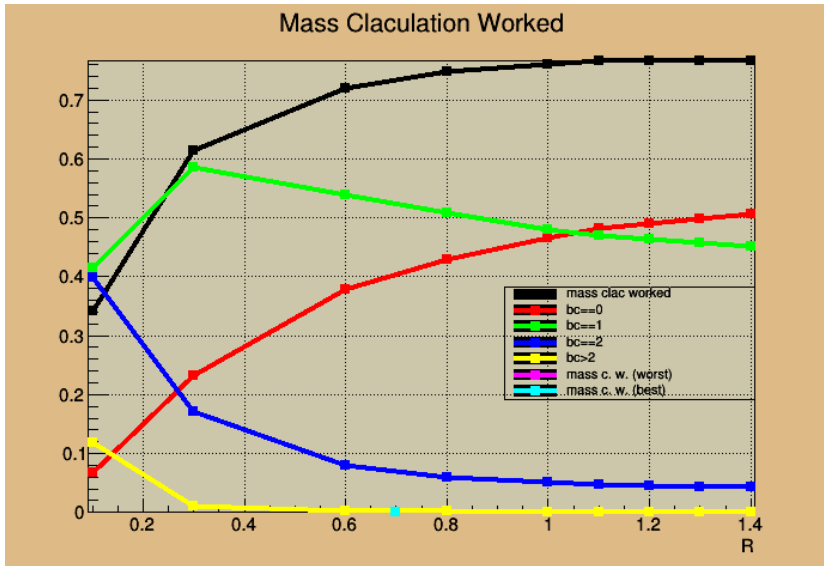

Durham_8_13: $R = 1.3$

Choose R for kt algorithm

- For W mass R = 1.0 seems best
- For H mass R = 1.3 seems best
- Maybe b-jets have a wider spread
- I will continue with 1.3

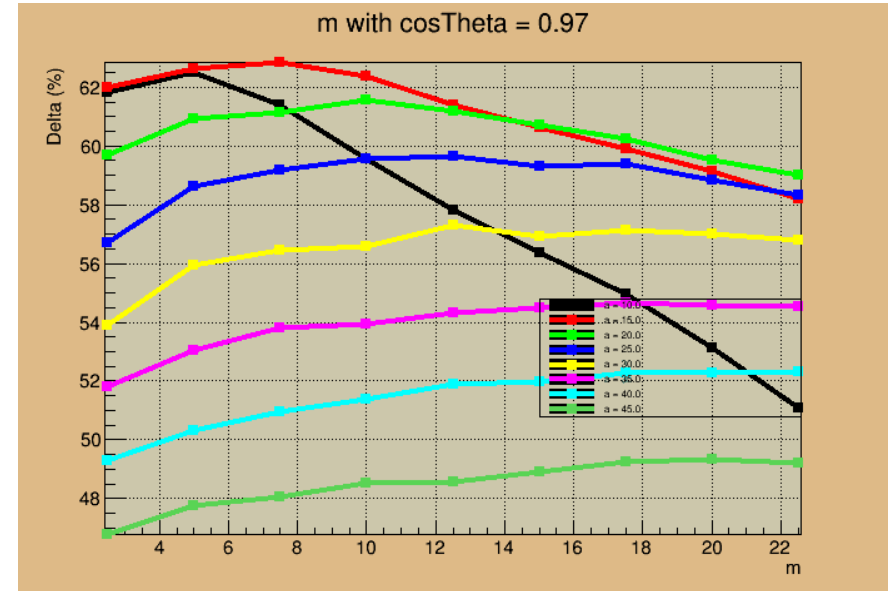

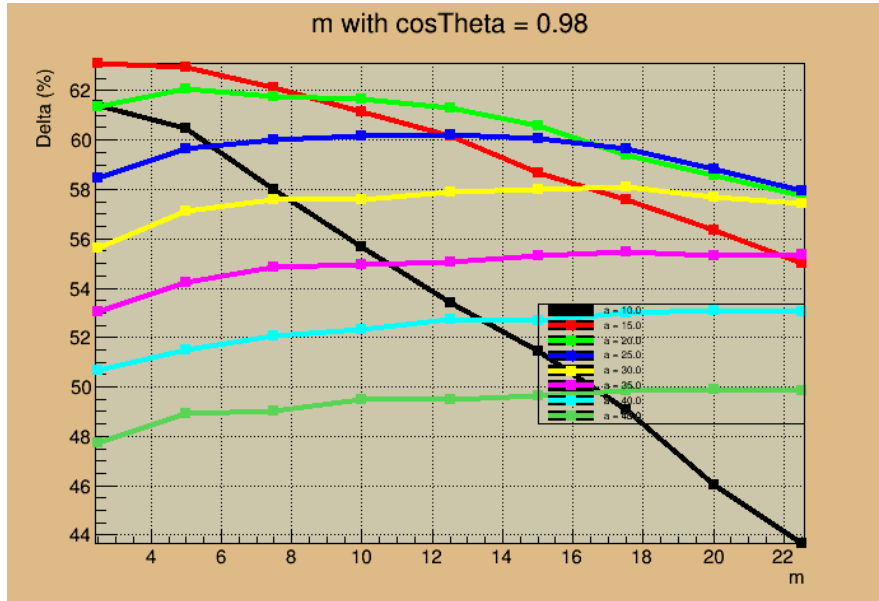

Lepton selection

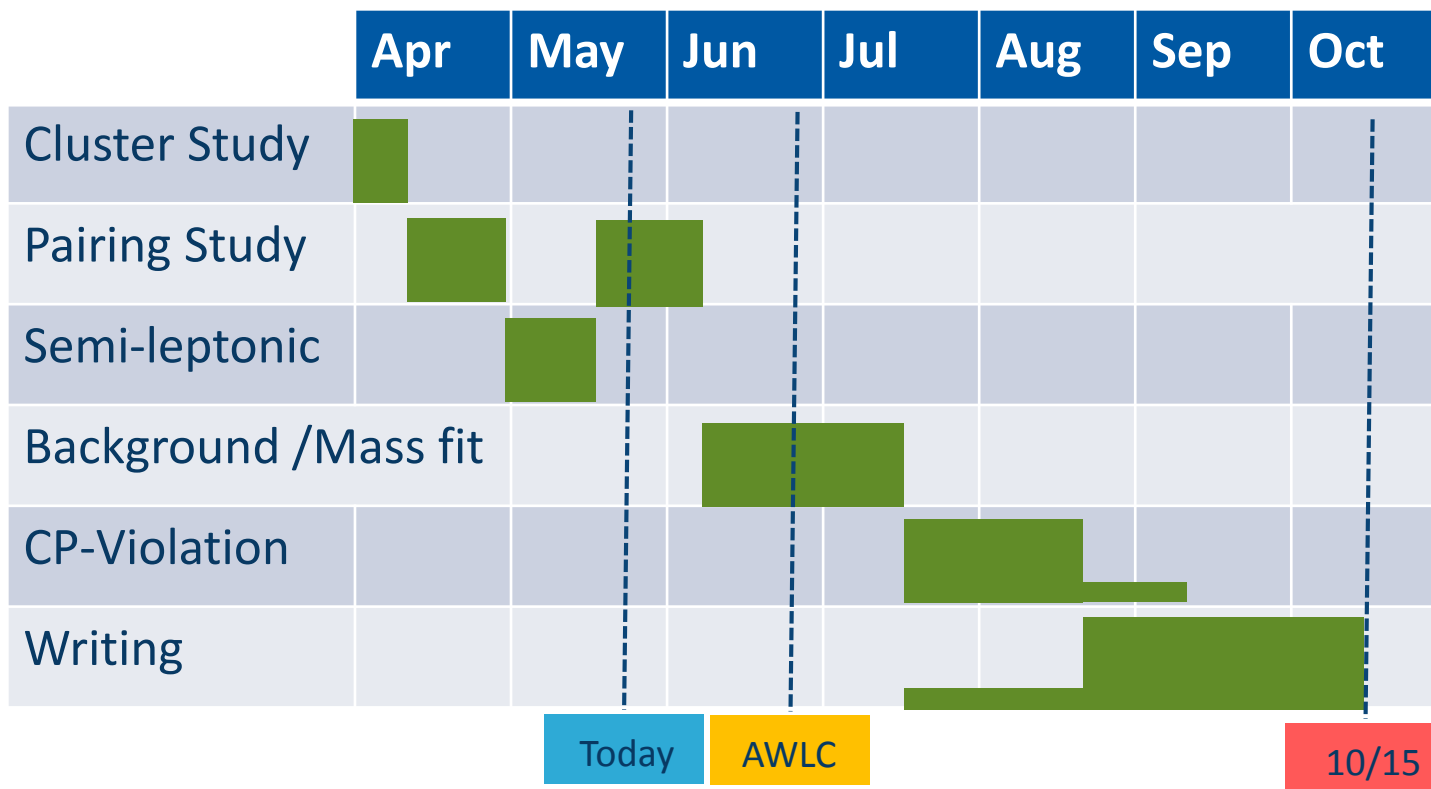

- Isolate Lepton selection
 - Pfo has charge
 - $E_{\text{cone}}^2 \leq m^*(E_{\text{pfo}} - a)$
 - $m = 6 \mid a = 15$
 - $E_{\text{cone}} = \text{Sum}(E_i[\cos(\alpha(p_i, p_{\text{pfo}})) \geq 0.98])$
- 67.6 % correctly selected (quite good (33 % tau))
- 4.3 % false selection in hadronic channel

Lepton selection

- $\Delta = (\text{Selection efficiency in semileptonic} - \text{false selection in hadronic}) \cdot 100$
- Corrent: $E_{\text{cone}}^2 \leq m \cdot (E_{\text{pfo}} - a) \mid m = 6 \mid a = 15 \mid \cos\Theta = 0.98$

Schedule

Plan

- Check χ^2 Pairing with 3D display
- Develop extra conditions for pairing
- Include semi-leptonic mode (6 jets)
- Background study with cuts
- Goal:
 - mass fit \rightarrow mass resolution measurement
 - Detection efficiency
 - \rightarrow cross section times branching ratio
- Bonus:
 - Research how to distinguish H^+ and H^-
 - Study of CP-violation measurement
