

## Minutes of WP-meeting 399

### Attendance:

Zoom: Ulrich Einhaus, Jochen Kaminski, Oliver Schäfer, Ron Settles, Jan Timmermans,

### General News:

Jochen reported that the DRD1 formation process is quasi finished, the extended proposal has been submitted and only work on the workpackages is ongoing. The responses to WP4 (Tracking TPCs) are still very few (5 or so) and still more response for them are needed.

### PCMAG/LP setup, test beam:

Oliver: Test beam schedule:

- The test beam is full for this year and no more slots are available. Some ideas about potential test beam setups have been discussed. The favorite was a new module with Timepix3-based GridPixes. For example the Nikhef quads could be arranged in a LP-module. Also a test beam with the new sALTRO would be interesting, once it is available.

### AOB:

The next workpackage meeting will take place on August 31<sup>st</sup>.
