

Minutes of WP-meeting 411

Attendance:

Zoom: Paul Colas, Ralf Diener, Jochen Kaminski, Claus Kleinwort, Shinya Narita, Huirong Qi, Jan Timmermans, Maxim Titov

General News:

Paul announced the 3rd ECFA Higgs factory workshop. It will take place from 9th to 11th of October 2024 in Paris. The first WS was at DESY, the second one in Paestum.

The next DRD1 meeting will be mid of June (17th to 21st) and the ICHEP at the end of July.

The LCTPC-CM agenda was discussed. Maxim said, that Ricardo Farinelli of INFN has confirmed his participation in the session “Discussion with Drift Chamber Experts” on Wednesday. He will give a presentation and then discuss the IDEA drift chamber with us. Huirong will also organize a speaker on simulations for the CEPC drift chamber. It was also suggested to hear about the ILD point of view on gaseous tracking. Therefore, Ties Behnke should be asked to give a presentation as a spokesperson of ILD. Serguey or Shinya could give a presentation on the new TYL project studying single layer graphene as an ion blocking device.

The progress on the ALICE experiment, in particular on the track distortions correction would be interesting, but it is difficult to find a speaker, Jens Wiechula had presented already during last year’s LCTPC-CM, an alternative speaker could be Ernst Hellbär of U Frankfurt.

AOB:

The next workpackage meeting will take place on March 7th.
