

Current situation 11/21

- Finally accepted my LCWS proceeding..
- Organizing the efficiency of the standard KinkFinder dependence on the MC kink angle for K, pi, xi
- Check the fake rate of the standard KinkFinder
- Make the other momentum (e.g. 1 GeV) samples of SM kink
- Calculate the distribution of the sum of track chisquare and make a new cut
 - > test “new” kink finder with track chisquare cut
- Continue to study the new model
