

Report from the Institute assembly chair

A. Irles (IFIC, CSIC-UV)
T. Suehara (ICEPP, Tokyo U)

59 institutes · 18 countries · 7 guest members

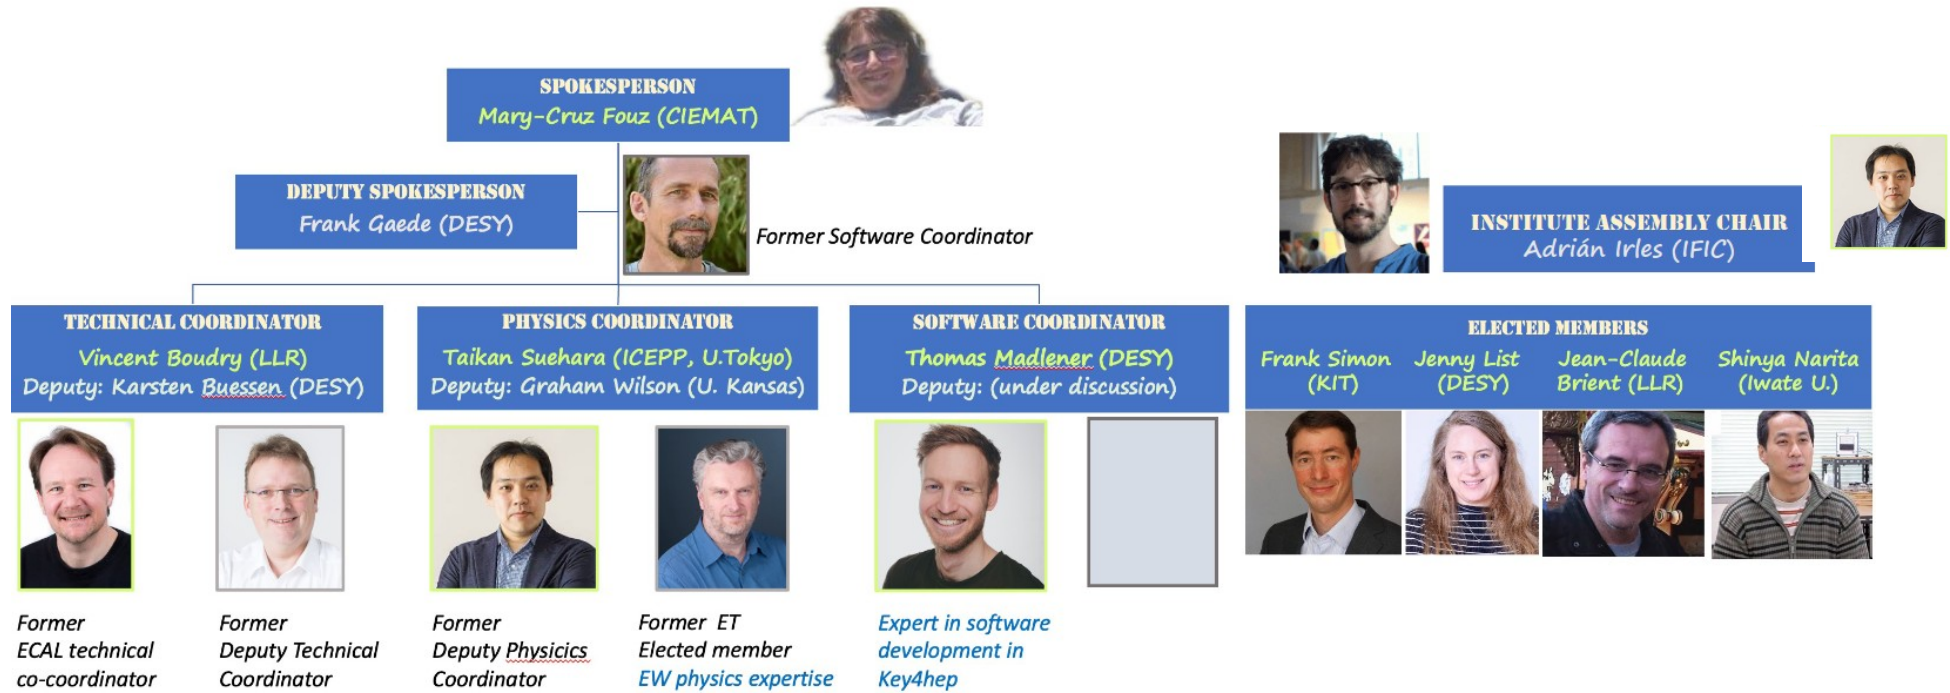

Management handover

Thanks to the outgoing team

Management handover

The future is here

- ▷ ILD has entered a new and exciting phase
- ▷ Main focus is on being integrated and playing a leading role in the next Flagship Collider at CERN.
 - Integration in FCC-PED structure is ongoing and should be a priority for the ILD groups. The community is growing.
- ▷ (few) coming challenges to be faced by the collaboration that will require close “monitoring” from the IA:
 - The integration in this new (open) framework will pose some challenges to address to the ILD structure. Around 2028-29, detector concepts are expected to deliver EoI/LoI... and real collaborations be formed.
 - Maximization of collaboration efforts and openness during this period.
 - Attraction of new members – update of ILD entry points (webpage, wikis, etc)
