

What are ~~your~~ ^{the} program priorities ?

What if the integral funds are smaller ?

- Drop IARC funds
- Drop EB welder... use industry
- Cut CPF capacity
- Delay or eliminate AARD program
- Eliminate Cryomodule test stand
- Eliminate building extension at NML
- Eliminate HTS 2
- Eliminate VTS 2,3
- Cut materials program

What if the integral funds are smaller ?

- This is NOT business as usual....
- With the end of the B factory and Tevatron operations in 2010... unless we get serious about supporting accelerator R&D for a new machine... we are planning an exit strategy for HEP in the U.S.
- With reduced funding we should first question whether the U.S. strategy WRT ILC makes any sense.
 - Will it happen ?
 - Do we have a sensible plan to host it ?
 - Will we even participate ?
- At present ILC and SRF funding levels I believe the U.S. will at best be a participant in an ILC built elsewhere in the world
