Status of ILCDoc

Maura Barone

GDE/Fermilab

TO DO

- Solve the problem in Indico that prevent us to upload the harvested metadata

- Insert some PUBLIC documents, ex. "Reports/Statements" from the ILC-Wiki (?)

- Support the RDR (?)

- Move documents from the ilc-fnal-plone repository (?)

- New link to the interface page in the linearcollider home page

RDR

- "Suggest to the RDR groups that they document the detailed work for the RDR as 'ILC reports', which can then in principle be referenced in the RDR document itself." (Nick)

- ILCDoc can provide:
  - **collection "Report"**
  - **numbering scheme ILC-REPORT-2007-nnn**
  - **requesting the record name and later submit the file(s)**
  - **access restriction: INTERNAL (?)**

ILC-Fermilab-Plone: migration?

- Test on migrating few "Public" documents to ILCDoc
  - **Metadata successfully extracted+transferred+converted+uploaded**
  - **Files uploaded**

- Directory structure with many levels and access restrictions
  - **Can this structure be mapped into our cat tree ?**
  - **755 "public" documents, but most of them are stored in users personal directories**
  - **Many folders have restricted content**

- Need to have/know:
  - **Lest of files and/or directories that need to be saved**
  - **Documents that can be INTERNAL or need to be PRIVATE**
    - if private… who should be granted access to them
