

## **SiD Spring Break April 2007**

## **General Software Issues at SiD**

**Tony Johnson**  
**Stanford Linear Accelerator Center**  
**[tonyj@slac.stanford.edu](mailto:tonyj@slac.stanford.edu)**

# Outline

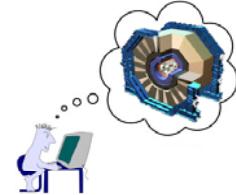

---

- Topics Covered
  - Recap: Software Overview
    - Geometry
    - SLIC, org.lcsim
    - Tools
  - Planned Enhancements
    - LCIO improvements
    - LCGO common geometry
  - Documentation/Communication/Collaboration
    - Documentation
    - Forums
    - New SiD web site

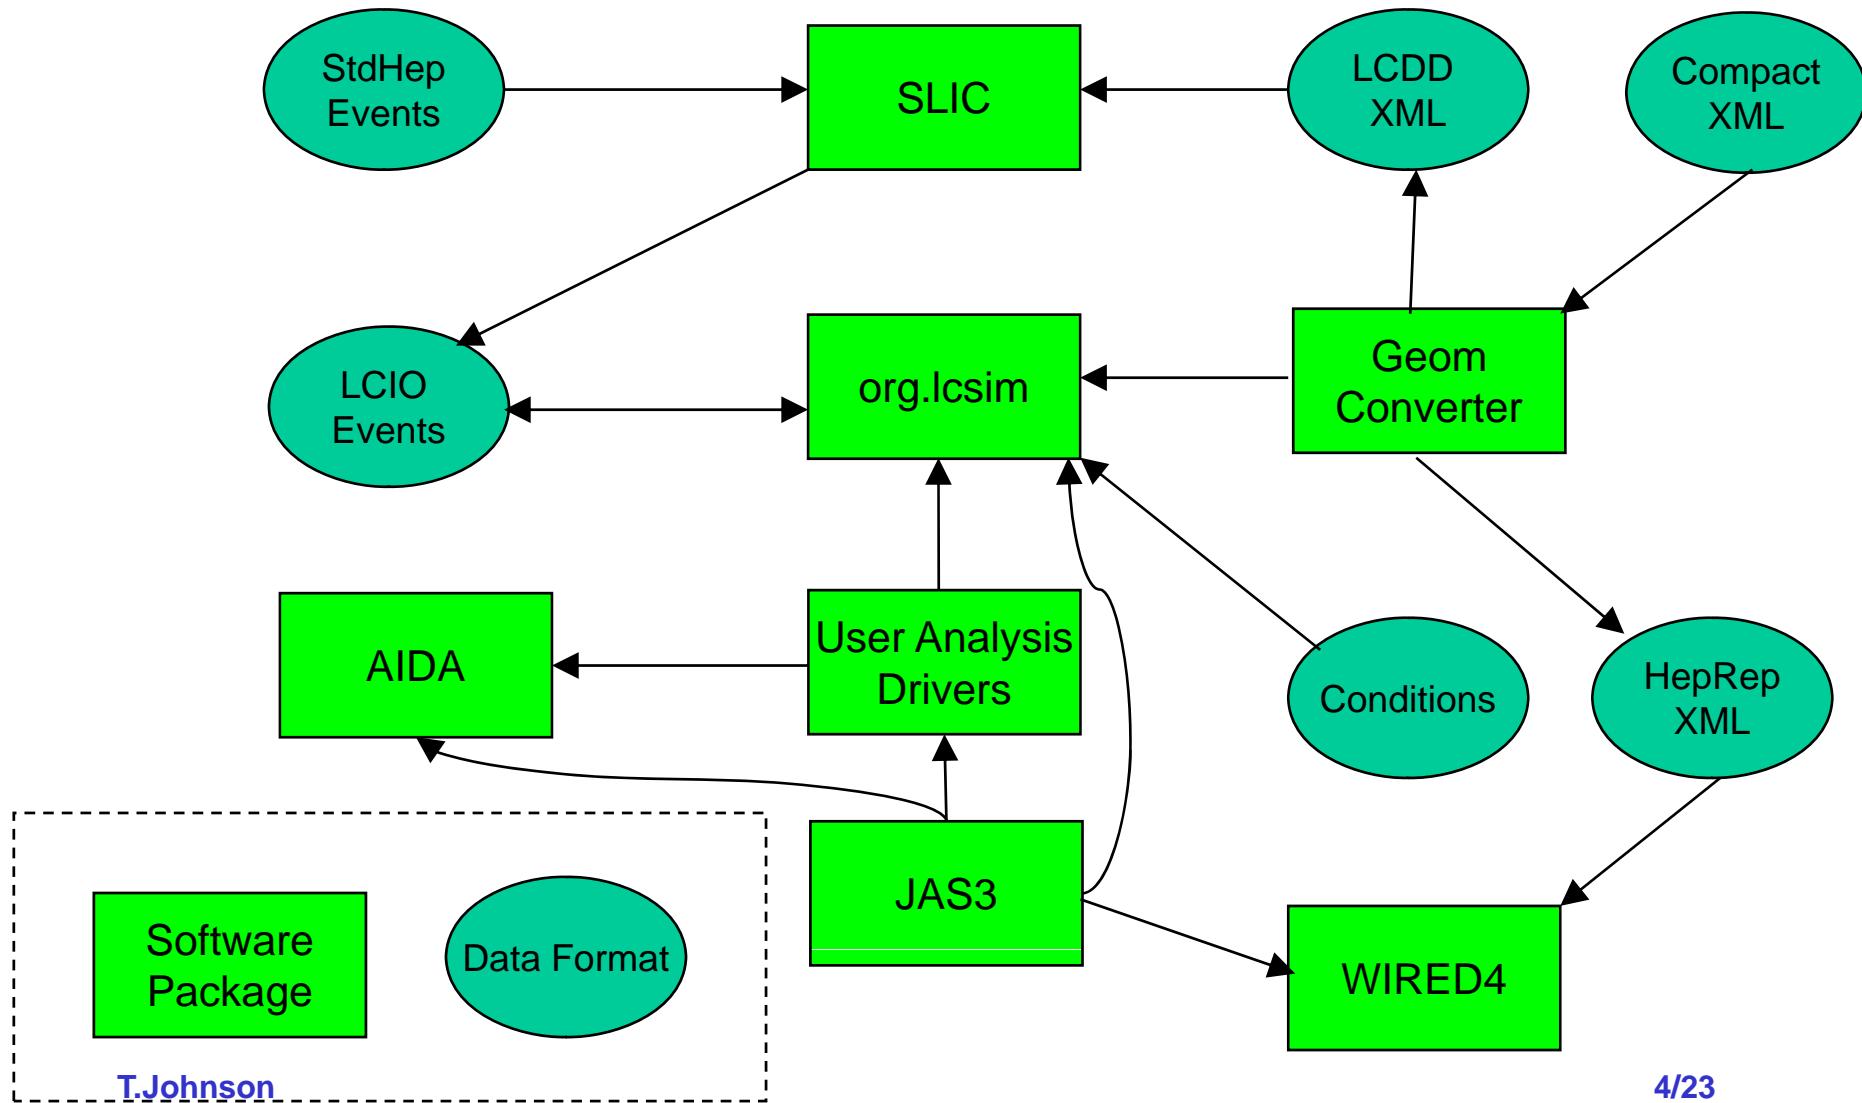

# Goals

- 
- Enable full studies of ILC physics to optimize detector design and eventual physics output
    - Use realistic detector geometries
    - Full simulation (in combination with fast parameterized MCs)
    - Full reconstruction
      - Simulate benchmark physics processes on different full detector designs.
      - Encourage development of realistic analysis algorithms
      - See how these algorithms work with full detector simulations
  - Facilitate contribution from physicists in different locations with various amounts of time available (normally not much!)
    - Software should be easy to install, learn, use
      - Goal is to allow software to be installed from CD or web with no external dependencies
      - Support via web based forums, tutorials, meetings.

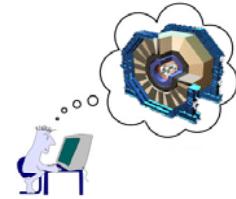

# Overview: “SiD/ALCPG” Framework

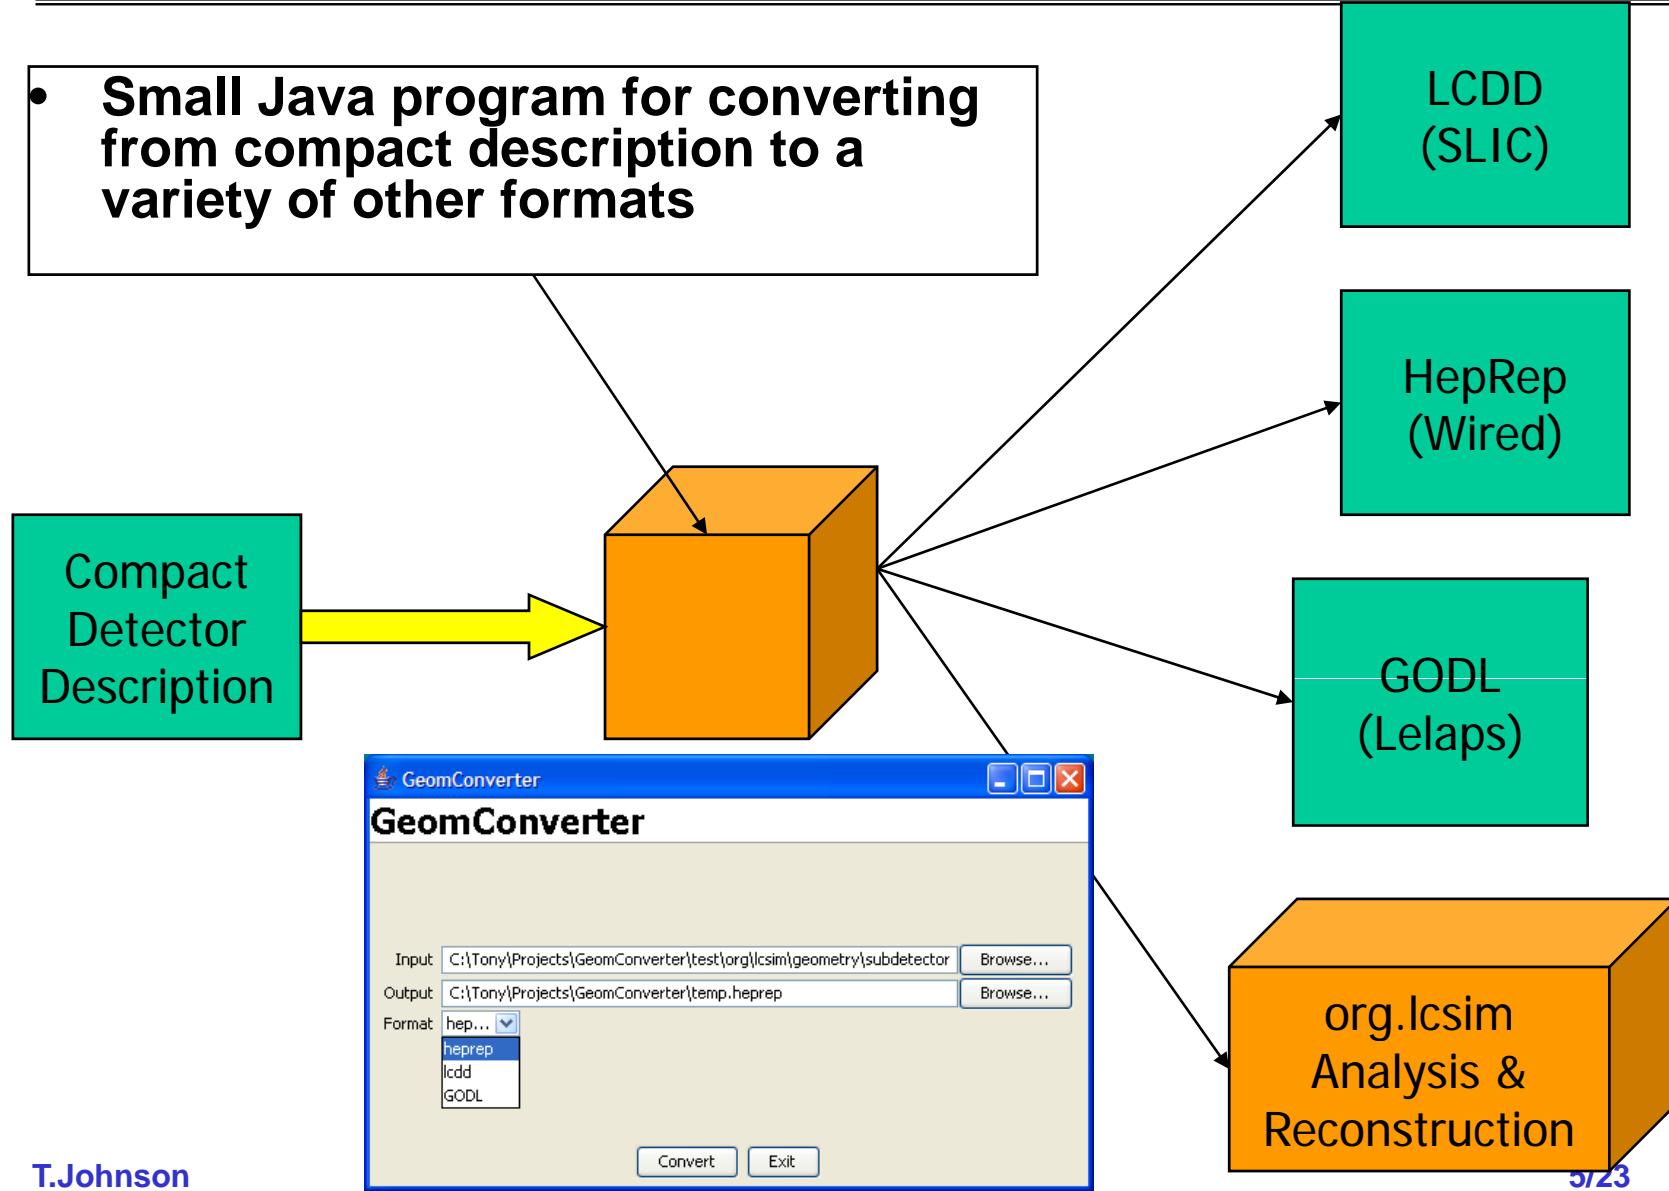

SiD

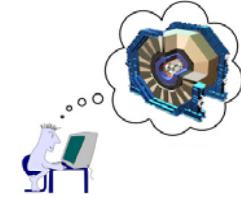

Spring Break, April 2007

# org.lcsim: Geometry Converter

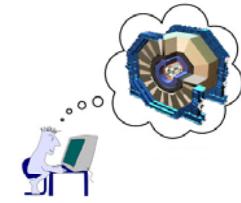

- Small Java program for converting from compact description to a variety of other formats

# Geometry in org.lcsim

- Up to now geometry in org.lcsim was at very high level
  - Derived from compact geometry description
    - Detector -> Global properties of detector
    - Subdetector -> Location, layering of subdetectors
    - IDDecoder -> Hit position, neighbors, ...
  - Not sufficiently detailed for Si strip reconstruction
- Detailed geometry created by Tim Nelson, Jeremy McCormick
  - Derived from compact description
  - Fits into existing compact geometry description
  - Gives full positioning of elements at the strip level

# Detailed Geometry in org.lcsim

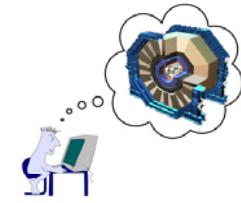

- **Geometry tree**
  - hierarchy of PhysicalVolumes and LogicalVolumes
    - LogicalVolume
      - shapes – parameters, isInside
      - materials - A, Z, density, radiation length, interaction length, etc.
    - PhysicalVolume
      - transformation - translation + rotation
- **DetectorElement tree** –
  - hierarchy of DetectorElements with uplinks
    - What DetectorElement is point inside?
    - What position of a DetectorElement?
    - What is the global to local coordinate transformation for the DetectorElement?
- Existing **Detector, Subdetector** become DetectorElements

```
// Get child DetectorElements of the Detector.  
IDetectorElementContainer detElems = detector.getChildren();  
// Loop over the child DEs.  
for ( IDetectorElement de : detElems )  
{  
    // Print the name.  
    System.out.println( de.getName() );  
    // Print the position.  
    if ( de.hasGeometryInfo() )  
    {  
        System.out.println( de.getGeometry().getPosition() );  
    }  
    // Print the names of the children.  
    for ( IDetectorElement child : de.getChildren() )  
    {  
        System.out.println( " " + child.getName() );  
    }  
}
```

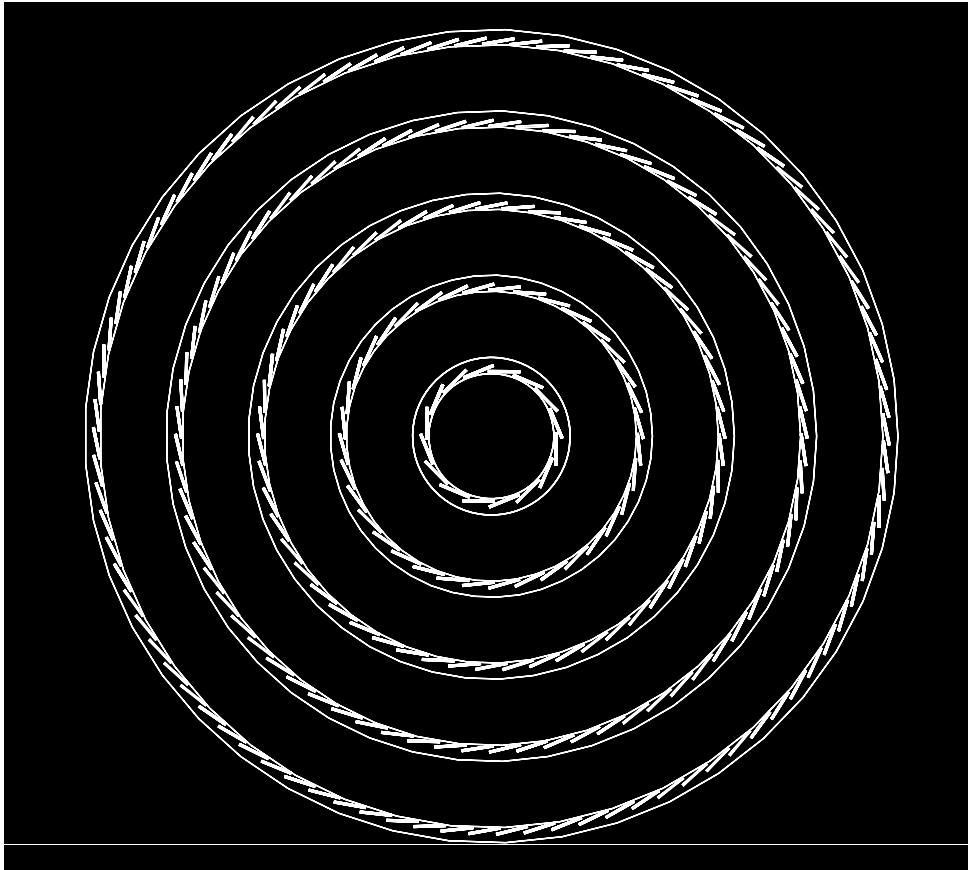

SiD

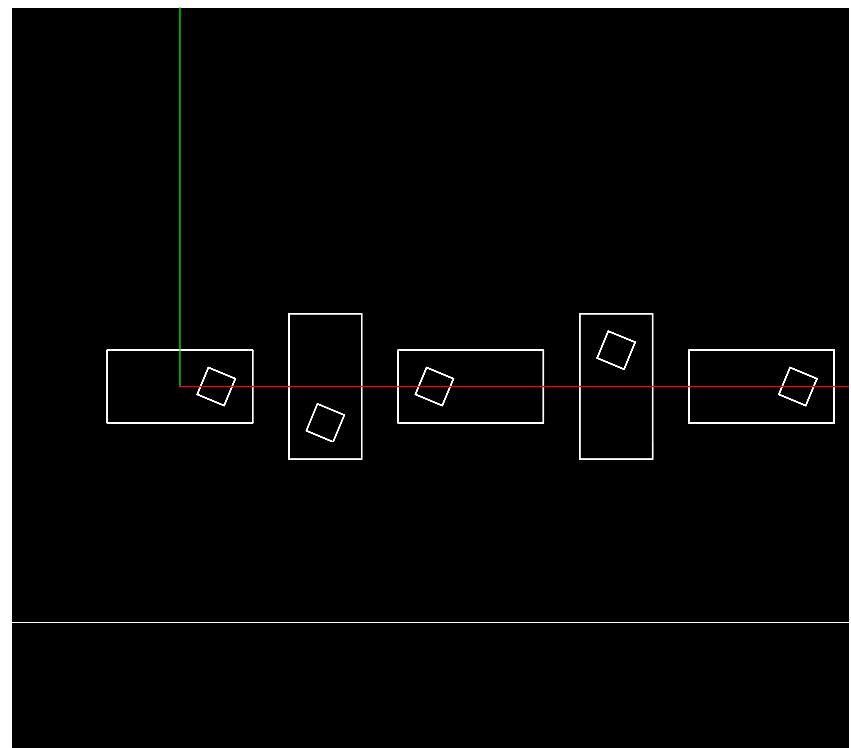

Spring Break, April 2007

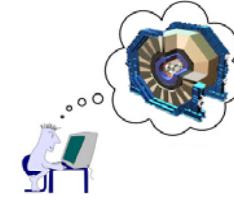

## SiTrackerBarrelTest

## ShapeRotateTest

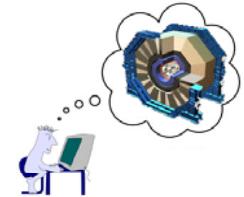

# org.lcsim Contents

- Org.lcsim package includes:
  - Physics utilities:
    - Jet finders, event shape routines
    - Diagnostic event generator, stdhep reader/translator
    - Histogramming/Fitting/Plotting (AIDA based)
    - Event Display
    - Processor/Driver infrastructure
  - Fast MC
    - Track/Cluster smearing
  - Reconstruction
    - Cheaters (perfect reconstruction)
    - Detector Response
      - CCDSim, Digisim
    - Clustering Algorithms
      - Cheater, DirectedTree, NearestNeighbour, Cone
    - Tracking Finding/Fitting Algorithms
      - TRF,
    - Muon Finding, Swiming
    - Vertex Finding (ZvTop)
- Goal of org.lcsim is
  - not “A single reconstruction package”
  - a framework into which reconstruction algorithms can be plugged.
- We encourage users to contribute code to the “contrib” area as soon as possible.
  - Important to encourage collaboration, reuse, and as learning tool.
  - Recently split into:
    - “Contrib” – code which compiles and is maintained
    - “Sandbox” – ideas, analysis snippets, doesn’t necessarily compile
- Many contributions added recently:
  - HMatrix cluster analysis
  - VertexFitter
  - PFA algorithms/template
  - SODTracker
  - Garfield Tracker
  - Calorimeter Cell Ganging
  - FastMC improvements
  - Tracking finding/fitting
  - MIP Finder
  - Minimum Spanning Tree Clustering

Examples x

### org.lcsim examples

These examples are written using the Java language. After opening them you need to compile and load them, and then use feed data to them using the Run menu.

<a href="#">Analysis101</a>	Intro to analysis with AIDA.
<a href="#">BooleanCondition</a>	Add a boolean value to the EventHeader and read it back again from a different Driver.
<a href="#">Cheater</a>	ReconCheater example that makes perfect clusters, tracks, and reconstructed particles.
<a href="#">ClusterFinding</a>	Find clusters using the Nearest Neighbor clusterer.
<a href="#">DigiSimExample</a>	Digitization example using the DigiSim package.
<a href="#">EventGenerator</a>	Simple diagnostic.
<a href="#">FastMC</a>	Run the Fast MC.
<a href="#">JetFinding</a>	Use the Jet Finder.
<a href="#">LCIOOutput</a>	Write LCIO output.
<a href="#">NestedDriverExample</a>	Nest analysis Driver.
<a href="#">PrintEventHeader</a>	Print the Event Header.
<a href="#">SkipEvent.java</a>	Skip events using the skip method.
<a href="#">TrivialPFA.java</a>	An example PFA.

## Contrib

Package	Author	State	Docs/Talks	Description
grq.lcsim.contrib.CalAna <sup>2</sup>	?	?		?
grq.lcsim.contrib.CarstenHense <sup>3</sup>	Carsten Hensel	?		HMatrix cluster analysis
grq.lcsim.contrib.Cassell.recon.Cheat <sup>4</sup>	Ron Cassell	?		Cheat Recon driver
grq.lcsim.contrib.EricBenavidez.EMClusterID <sup>5</sup>	Eric Benvides	?		HMatrices analysis of single particle events
grq.lcsim.contrib.JanStrube.tracking <sup>6</sup>	Jan Strube	complete JUnit tests JavaDoc	A New Track Interface <sup>7</sup>	Alternate implementation of Track, FastMCTrack, Swimmer. Awaiting incorporation into main body of code
grq.lcsim.contrib.JanStrube.vtxFilter <sup>8</sup>	Jan Strube	incomplete		Vertex filter, using the Kalman approach by Grab, Luchsinger. Add the VtxFilterDriver from the sandbox to get an idea of the current status
grq.lcsim.contrib.JanStrube.zvtop <sup>9</sup>	Jan Strube	incomplete		ZVTop implementation, taking advantage of the new Track interface, alpha quality
grq.lcsim.contrib.KFFitter <sup>10</sup>	Fred Blanc	?		Kalman Filter Fitter
grq.lcsim.contrib.LeiXia <sup>11</sup>	Lei Xia	?		PFA analysis
grq.lcsim.contrib.NickSinev.tracking.wmfilter <sup>12</sup>	Nick Sinev	?		SLD Weight matrix filter
grq.lcsim.contrib.NickSinev.ztracking <sup>13</sup>	Mike Ronan+Nick Sinev?	?		Track cheater?
grq.lcsim.contrib.onoprienko.mcTrackFinder <sup>14</sup>	D. Onoprienko	complete		Configurable cheater track finder and related utilities.
org.lcsim.contrib.onoprienko.tester	D. Onoprienko	functional, under development		Track finder performance testing suite
org.lcsim.contrib.SODTracker	Fred Blanc	?		Silicon Outer Detector (SOD) Tracker
org.lcsim.contrib.StripSim	Tim Nelson	?		Silicon Strip Simulation (moving soon to org.lcsim.detector)
org.lcsim.contrib.SteveMagill	Steve Magill	?		PFA Analysis example
org.lcsim.contrib.niu	Vishnu and Guilherme	?		NIU PFA code
org.lcsim.contrib.proulx	?	?		?
org.lcsim.contrib.seedtracker	Richard Partridge	?		Tracking algorithm based on forming track seeds from all 3-hit combinations
org.lcsim.contrib.subdetector.tracker.silicon	Tim Nelson	?		Experimental geometry package (Developed further in Geomconverter as org.lcsim.detector by Jeremy)
org.lcsim.contrib.tracking	Tim Nelson	?		Outer-tracker-only track finding
org.lcsim.contrib.uiowa	Mat Charles	unstable		Template-style PFA implementation (NonTrivialPFA)

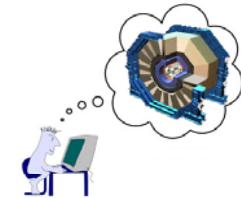

## Production

Package	Author	State	Docs/Talks	Description
org.lcsim.digisim	Guilherme Lima	?		Calorimetry digitization simulator
org.lcsim.mc.CCDSim	Nick Sinev	?		CCD digitization
org.lcsim.mc.fast	Many	?		Fast MC package, including tracking, calorimetry
org.lcsim.recon.cat	D. Onoprienko E. von Toerne	functional, under development		Calorimeter Assisted Track Finder
org.lcsim.recon.cheater	Mike Ronan	?	confluence	Recon cheater
org.lcsim.recon.cluster.analysis	Ron Cassell	?		Generic cluster performance analysis
org.lcsim.recon.cluster.cheat	Ron Cassell	?		Cluster cheater
org.lcsim.recon.cluster.clumpfinder	Mat Charles	?		finds dense clumps within clusters
org.lcsim.recon.cluster.directedtree	G.Lima, J.McCormick, Vishnu	?		Directed tree cluster finder
org.lcsim.recon.cluster.fixedcone	Norman Graf	?		Cluster finder
org.lcsim.recon.cluster.mifinder	Wolfgang Mader, Mat Charles	stable		MIP finding
org.lcsim.recon.cluster.mst	Mat Charles	stable		Minimal spanning tree cluster finder
org.lcsim.recon.cluster.nn	Norman Graf	?		Nearest neighbour cluster finder
org.lcsim.recon.cluster.structural	Mat Charles	stable		Specialized clusterer for hadronic showers
org.lcsim.recon.emid.hmatrix	Norm Graf	?		HMatrix package
org.lcsim.recon.ganging	Ron Cassell	?		Allows virtual ganging of calorimeter hits
org.lcsim.recon.muon	C. Mistene	?		Muon finding
org.lcsim.recon.particle	Ron Cassell	?		Perfect PFA
org.lcsim.recon.pfa.cheat	Mat Charles	functional		Cheating tools for PFA
org.lcsim.recon.pfa.identifier	Mat Charles	functional		Turn more primitive objects (clusters, tracks, etc) into ReconstructedParticles
org.lcsim.recon.pfa.output	Mat Charles	?		Modules to produce standard plots for PFAs
org.lcsim.recon.pfa.structural	Mat Charles	?	incomplete	Iowa PFA implementation (when stable) and associated tools
org.lcsim.recon.tracking.cheat	Ron Cassell	?		Track Cheater
org.lcsim.recon.tracking.tff	?	?		?
org.lcsim.recon.tracking.trf	Norm Graf	?		TBF track finder + filter
org.lcsim.recon.vertexing.billoir	Norman Graf, (Jan Strube)	incomplete		vertex fitting based on Billoir's method. Needs testing
org.lcsim.recon.vertexing.zvtop4	Jan Strube	incomplete		Vertex finding/fitting, awaiting completion of a vertex fitter
org.lcsim.recon.ztracking	M. Ronan	?		Track cheater

- Conclusions

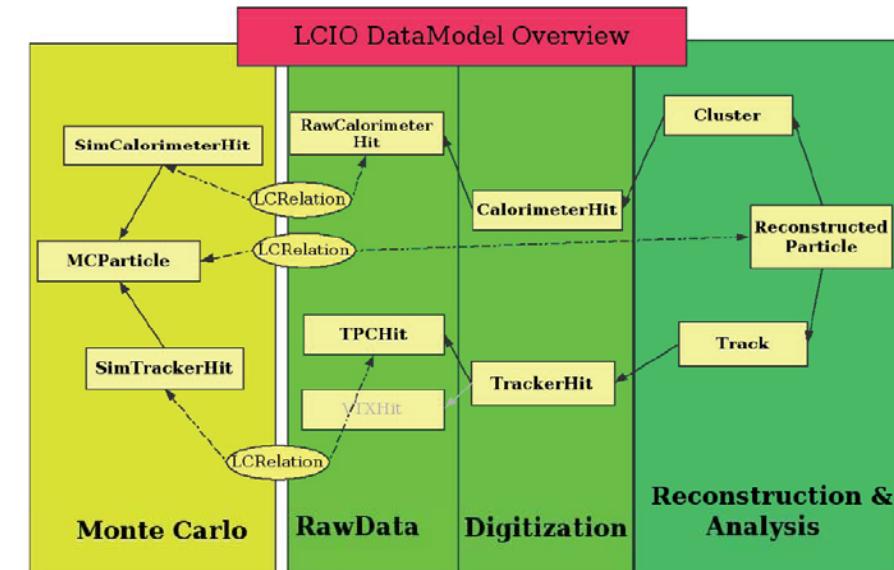

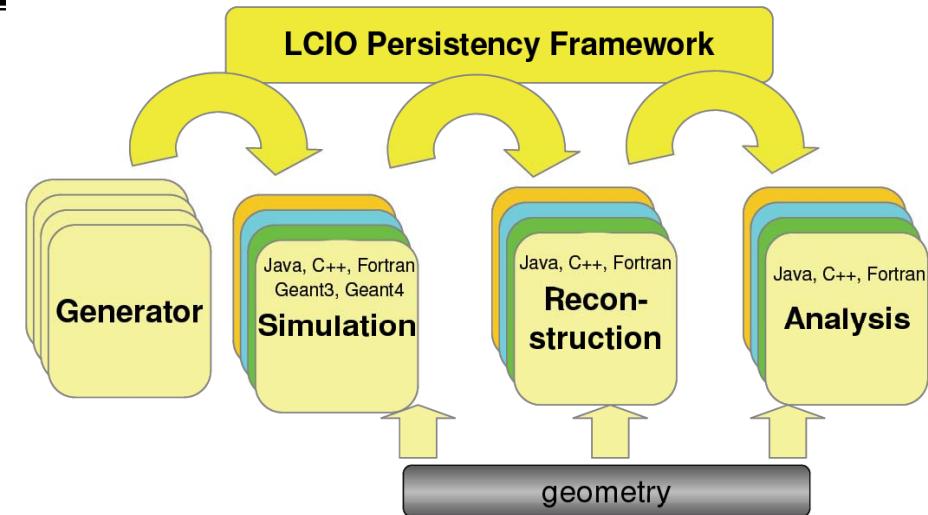

- Many people are working on reconstruction code
- Effort to persuade people to commit code to “contrib” area has been successful
- But it is not easy for new users to understand how to use or contribute

- We need to work to extend tutorials to also cover reconstruction packages
  - Encourage developers to contribute documentation
  - Start by updating: <http://confluence.slac.stanford.edu/x/f3c>

# LCIO Enhancements

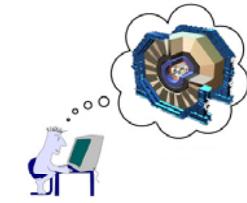

- LCIO adopted by most ILC software
  - Provides interoperability between frameworks
- LCIO enhancements being actively worked on
  - Improved performance for rawdata/DAQ
  - Improved efficiency for DST analysis
    - Random access to events/parts of event
    - Ability to split data over multiple files
  - Should be ready this summer
- LCGO – geometry interoperability
  - Technical specs developed
  - Ready by end of year?

## Silicon Detector (SiD) Design Study.

The Silicon Detector Design Study is developing the SiD Detector Concept for the ILC into a detailed, optimized, and fully integrated detector design. The SiD concept incorporates Si/W electromagnetic calorimetry and all-Si tracking in a detector design which attempts to optimize physics performance, constrain costs, and be robust against physics and machine backgrounds.

(Apr 05, 2007 10:35)

- Looks better than old site!
- Based on confluence (wiki) so has many collaborative features
  - <https://confluence.slac.stanford.edu/display/SiD/home>

SiD

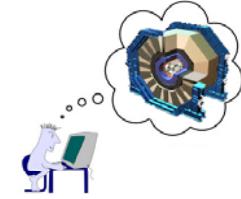

Spring Break, April 2007

# Proposal to replace SiD web site

- Confluence advantages
  - Easy to embed active content (e.g. ILC Newsline feed)
  - Searchable (including attached PDF, PPT, DOC, etc).
  - Can see list of recent updates
    - Very useful for keeping up-to-date with what is happening
    - Full version info
  - Once logged in to site you can
    - Edit any page (if authorized)
      - No need to learn new tools, just use web browser
      - Comment on any web page
      - Subscribe to be notified of changes to any web site
      - Create “news items”
    - ... and much more
- Other suggestions
  - Switch to using linear collider forums instead of hypernews

The screenshot shows a Confluence page titled "home". The left sidebar lists various attachments: LCWS07 at DESY, May 30 - June 3, 2007; SiD Workshop at Fermilab, April 9-11, 2007; SiD Org Chart; SiD Org Chart.png; Newsletters; Weekly Meetings; Upcoming; sid-org-chart.jpg; Working Groups; MDI Questions; and Snowmass 05. Each attachment has a timestamp indicating it was added by Tony Johnson or Karen Heidenreich. The main content area contains a rich text editor toolbar and a preview of a diagram showing two views of a silicon detector, labeled "SiD Detector versions simulated". Below the editor is a section titled "Silicon Detector (SiD) Design Study." which includes a brief description of the study's goals and a link to "Web design notes".

# Conclusions

---

- **Conclusions**
  - Basic framework for SiD simulation/reconstruction/analysis exists and is mostly stable and usable
  - Active work on reconstruction algorithms ongoing
- **Documentation, Tutorials etc exist**
  - Good at introducing tools, getting users started
  - Tend to fade out for more advanced reconstruction
    - Needs some work – please contribute
- **Communication**
  - Many tools exist – encourage more active use
