

# T2K experience with scintillator/MPPC detectors

Masashi Yokoyama  
Kyoto University  
[masashi@fnal.gov](mailto:masashi@fnal.gov)

for T2K-ND280 photo-sensor group  
and KEK Detector Technology Project

# Outline

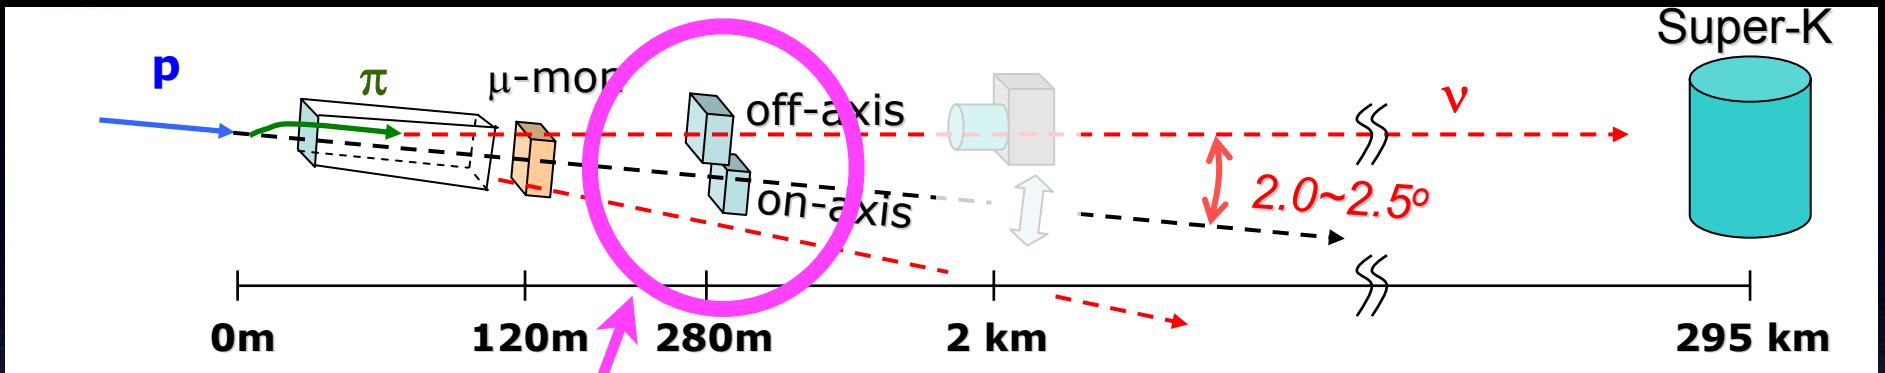

- Introduction:T2K and near detectors
- MPPC (Multi-Pixel Photon Counter)
  - Principle
  - Performance
- Ongoing R&D
- Summary

# T2K experiment

- Search for  $\nu_\mu \rightarrow \nu_e$  oscillation
- Precise measurement of  $\nu_\mu$  oscillation
- CP violation in lepton sector (2nd stage)

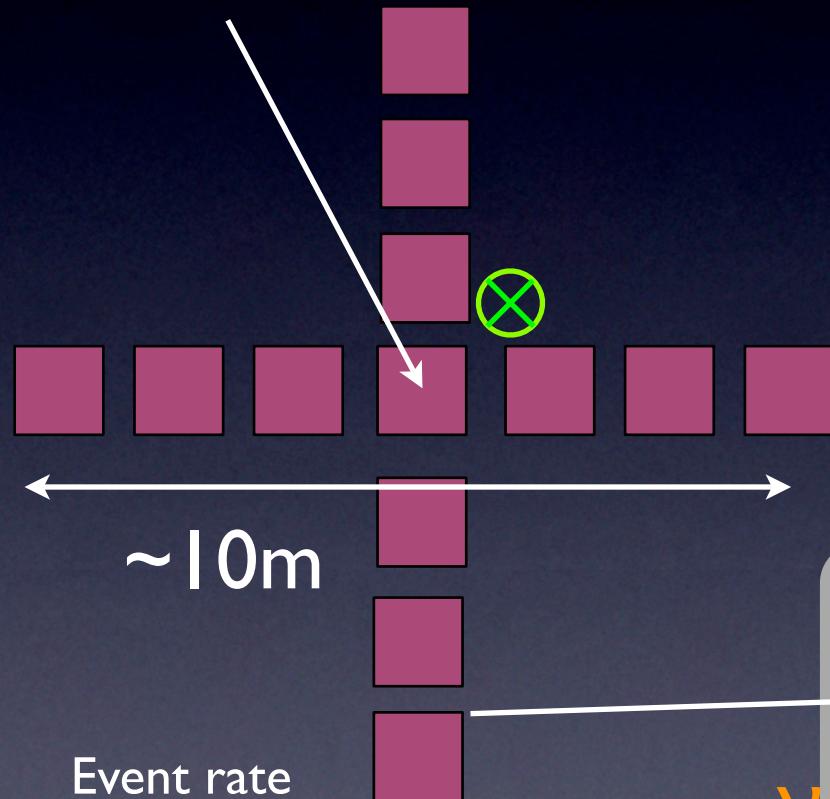

# Exp. layout

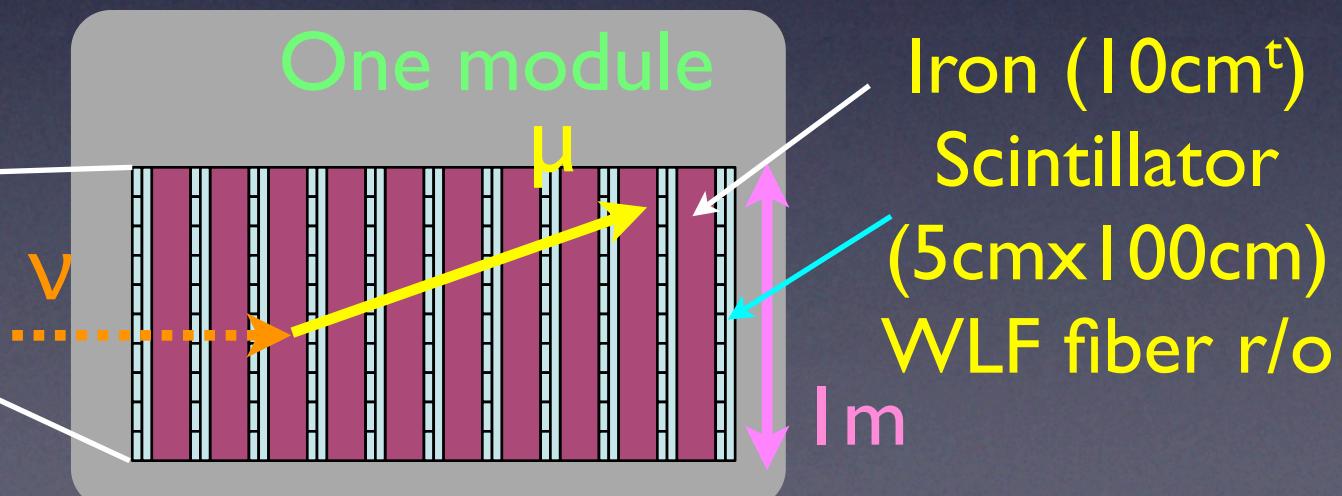

- Near detector complex to characterize neutrino beam before oscillation
  - ‘on-axis’ to confirm beam direction
  - ‘off-axis’ to measure flux, energy spectrum, cross-section, etc.

# On-axis detector

$\nu$  beam center

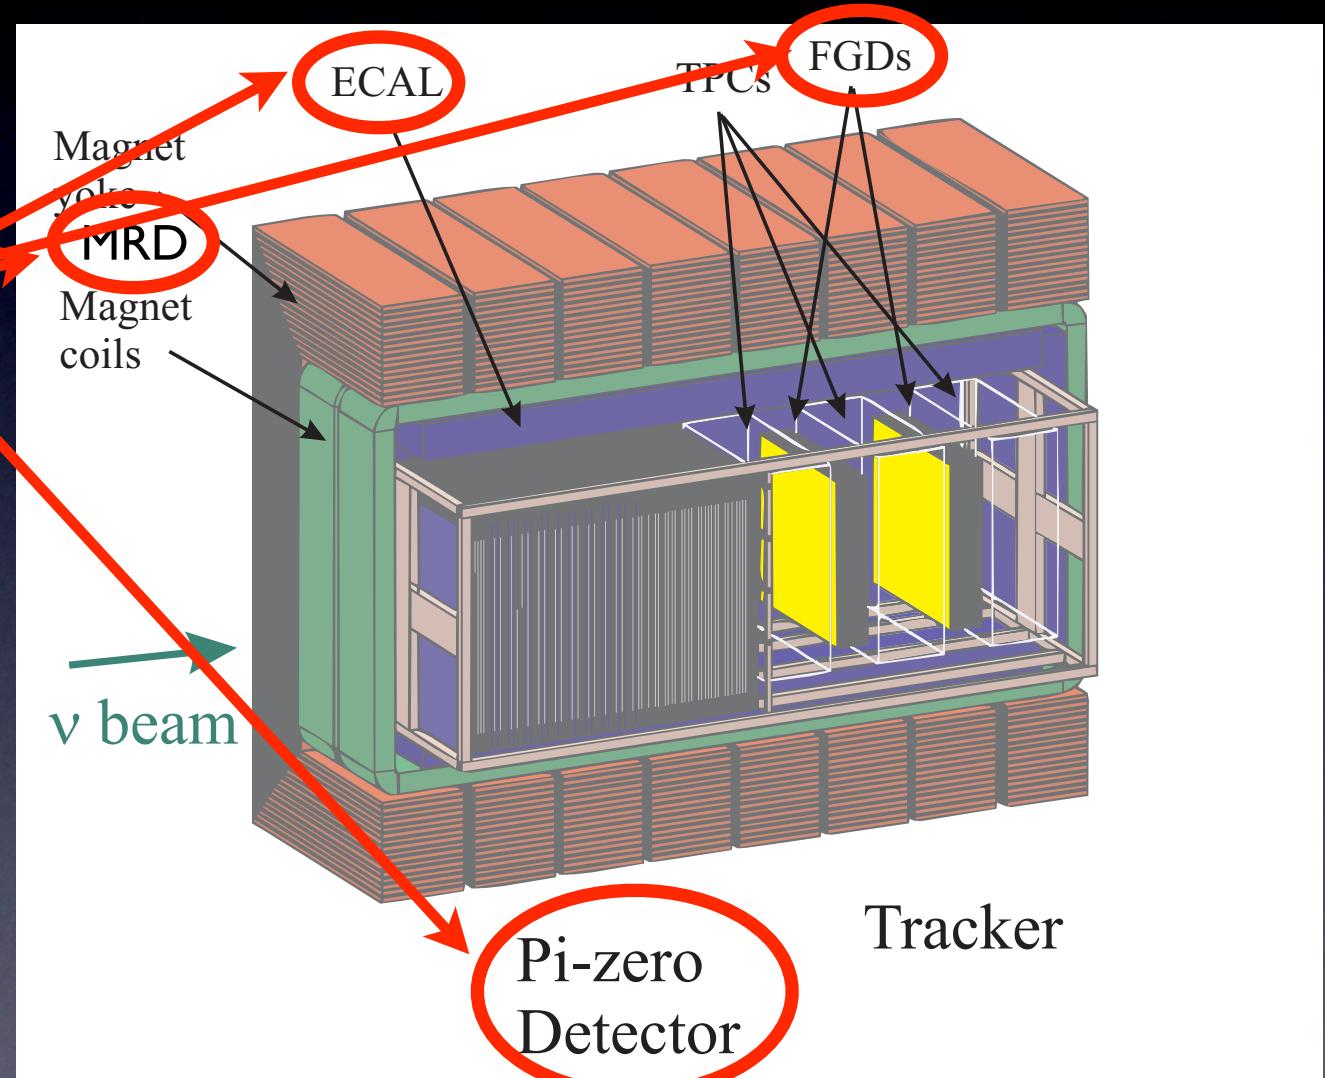

- Array of iron-scintillator stack
- Measure neutrino beam profile by detecting muons from  $\nu_\mu$  interaction in iron
- Cover wide area ( $\pm 5\text{m}$ ), large target mass ( $\sim 100$  ton total)

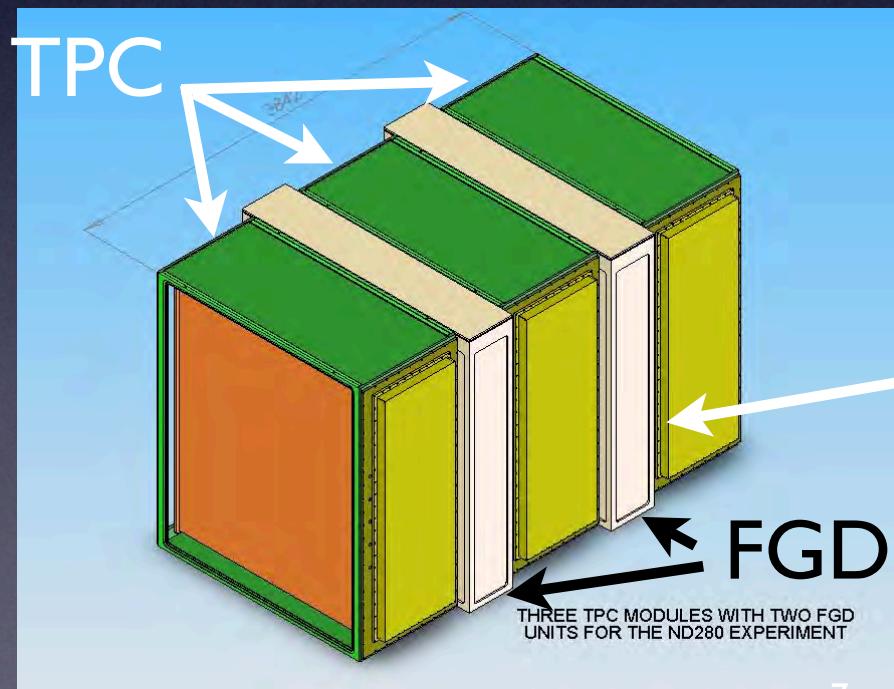

# Off-axis detectors

- Many active components based on scintillator + WLS fiber
- Inside 0.2T magnetic field by UA1 magnet

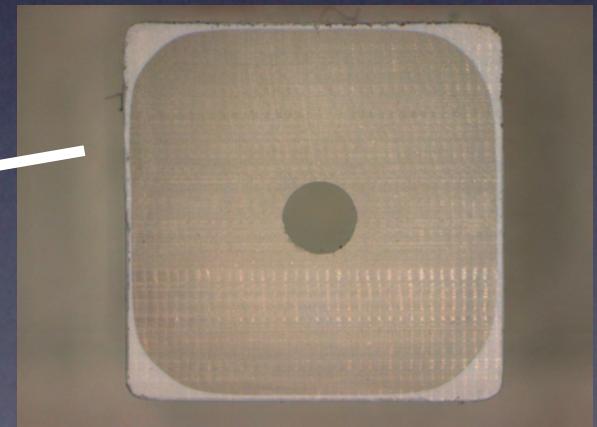

# Fine Grain Detector (FGD)

- (Fully) active target for  $\nu$  interaction
- $1 \times 1 \text{ cm}^2 \times \sim 2 \text{ m}$  length
- X-Y alternating layers, 30cm in beam direction
- $\sim 10,000$  channels in total

Scintillator in Canada

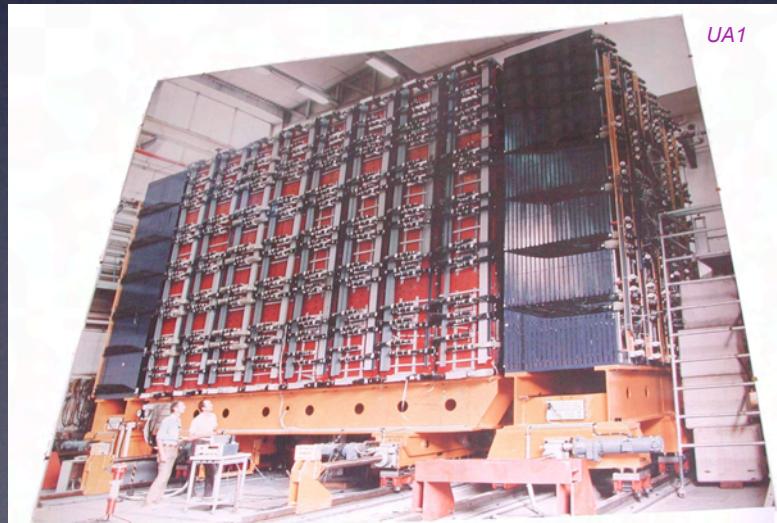

# Side MRD

- Instrument gaps in UA1 magnet yoke
  - Measure muons w/ large angle
- Large area: “S-shaped” groove

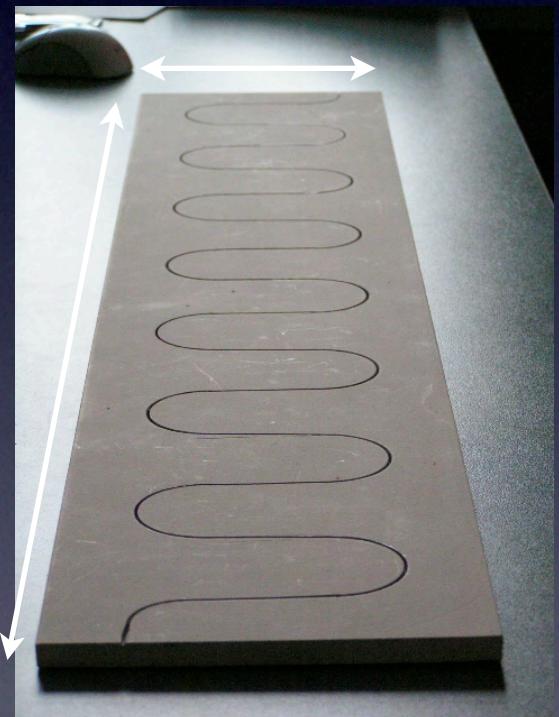

arXiv:physics/0606037

UA1 detector

870mm

170mm

Prototype in Russia

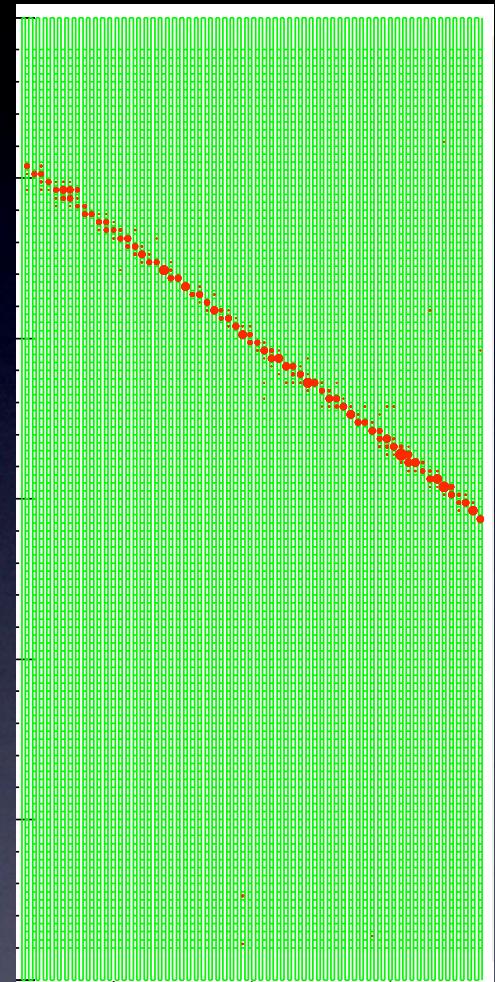

# Pre-T2K detector: K2K-SciBar

- Constructed for K2K
- Fully active detector with scintillator/  
WLS fiber/MA-PMT
- ~15,000 1.3x2.5x300cm<sup>3</sup>  
scintillators
- Hamamatsu 64-ch MAPMT (x224)
- ~3m WLS fiber (Kuraray YII)
- 10~20p.e./MIP/cm
- Now moved to FNAL for new  
experiment (E-954/SciBooNE)

# Pre-T2K detector: K2K-SciBar

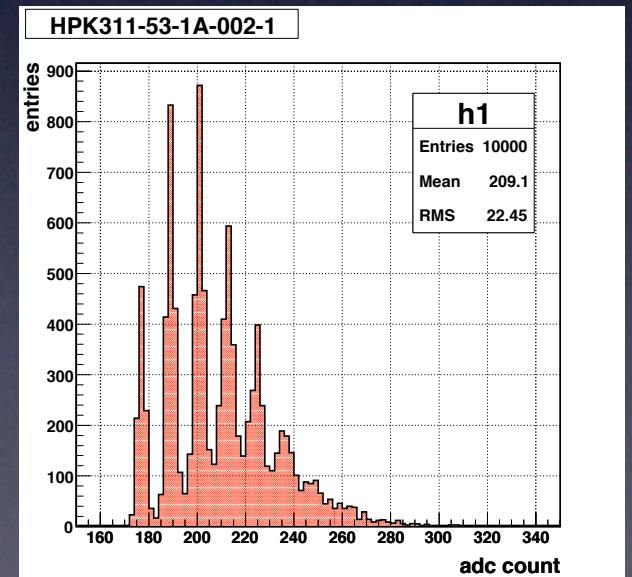

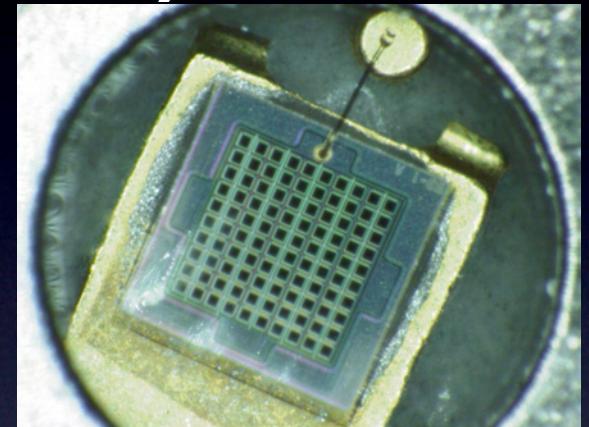

- Constructed for K2K
- Fully active detector with scintillator/  
WLS fiber/MA-PMT
- ~15,000  $1.3 \times 2.5 \times 300 \text{cm}^3$   
scintillators
- Hamamatsu 64-ch MAPMT ( $\times 224$ )
- ~3m WLS fiber (Kuraray YII)
- 10~20 p.e./MIP/cm
- Now moved to FNAL for new  
experiment (E-954/SciBooNE)

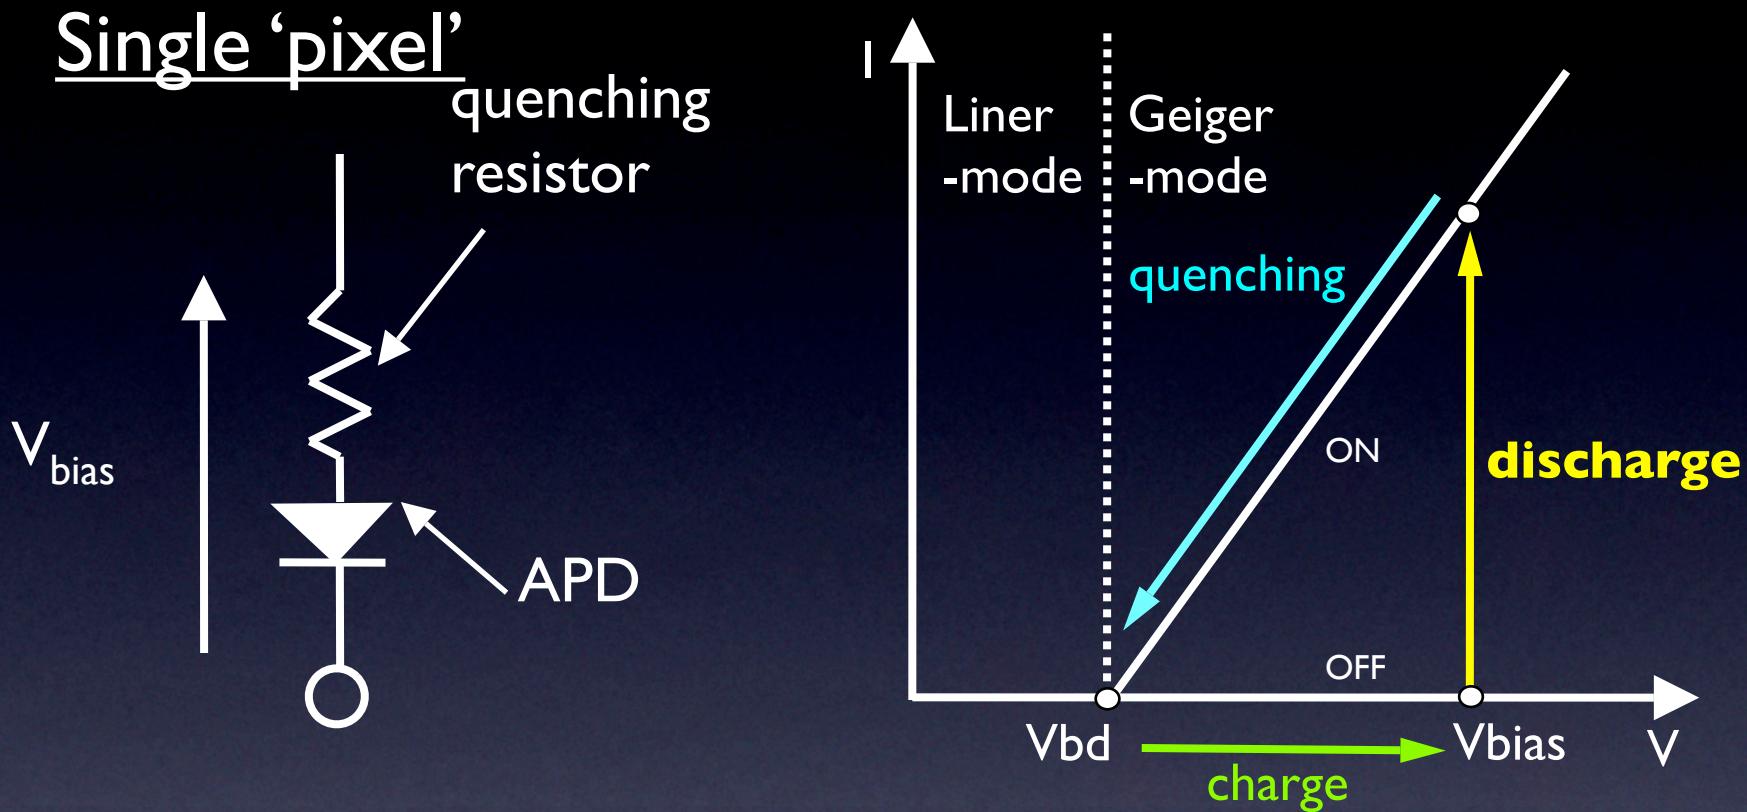

Cosmic ray observed w/  
SciBar @ CDF hall  
(Mar. 2007)

# Multi-Pixel Photon Counter (MPPC)

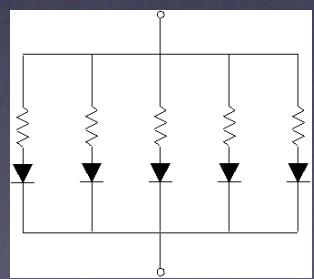

- Product of Hamamatsu Photonics
  - “silicon PM” family
- Characteristics:
  - Gain  $\sim 10^6$  w/ 70~80V
  - Noise  $\sim 0(100\text{kHz})$  @room temp
  - Photon eff.  $>\sim \text{PMT} \times 2$
  - Insensitive to B-field
  - Compact

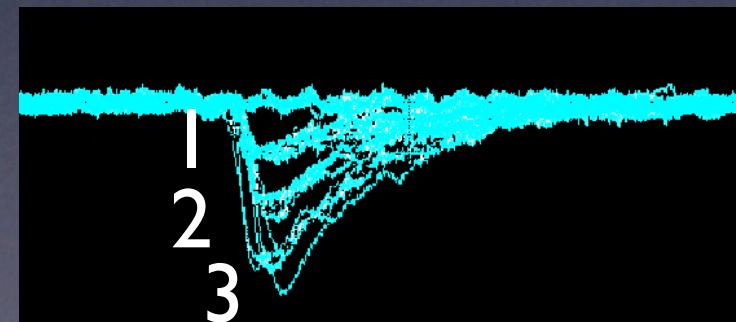

# MPPC principle

Sum from all the pixel

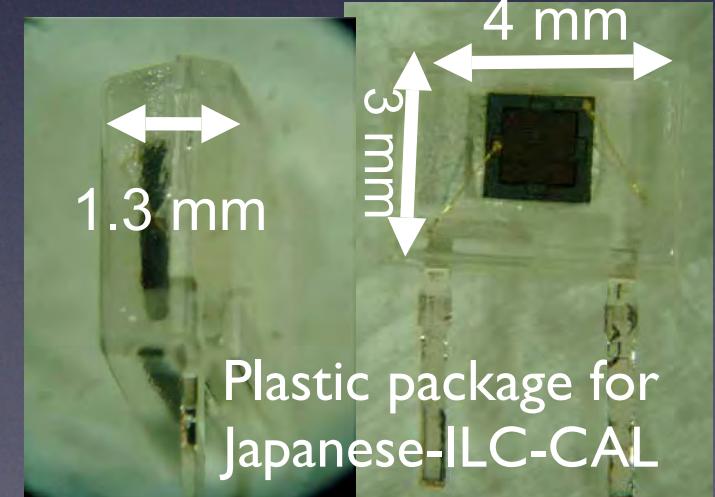

→ Signal proportional  
to number of  
'fired' pixels

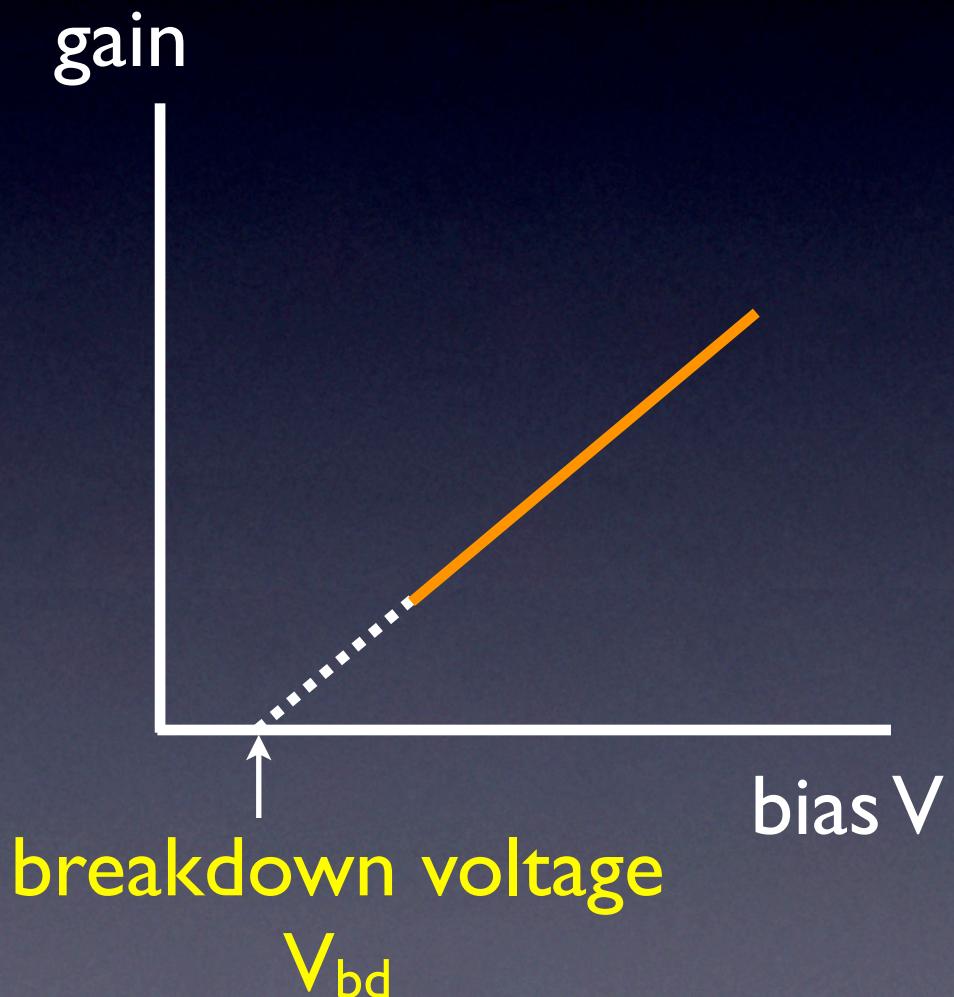

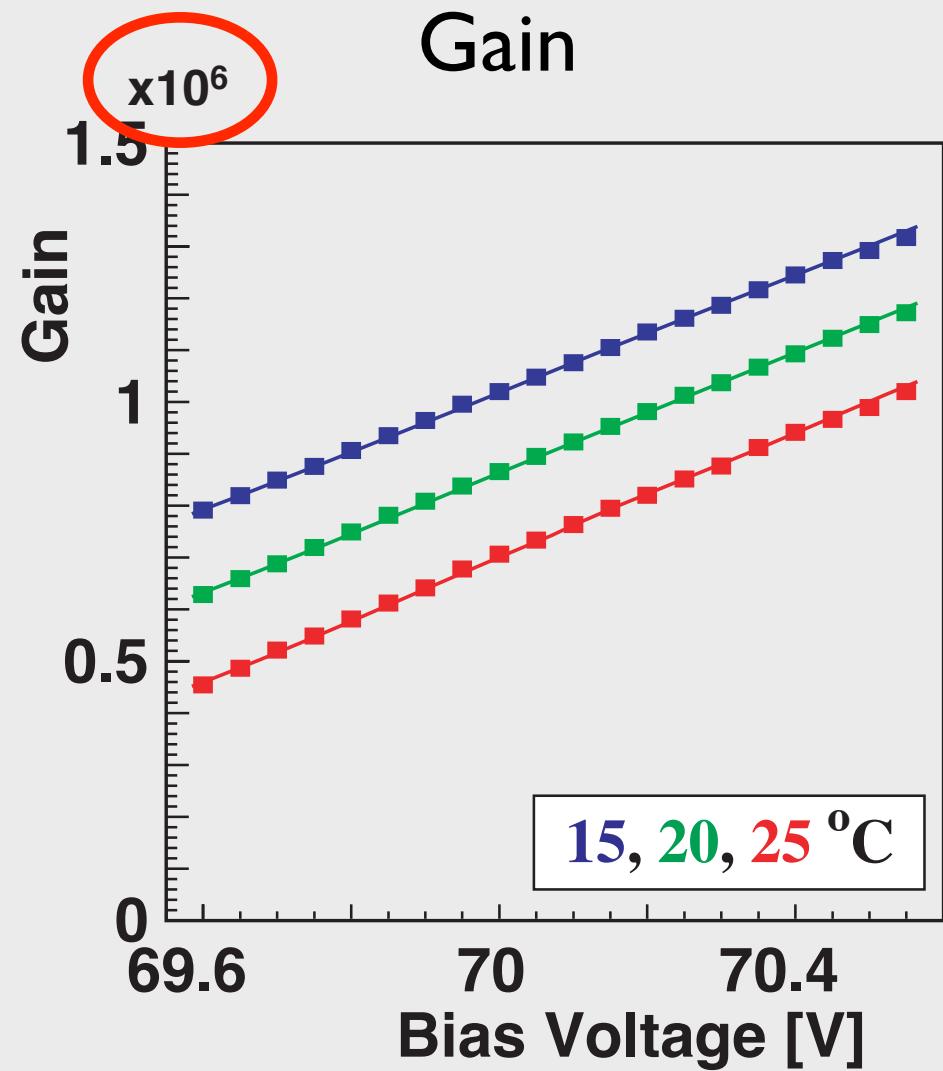

# Current MPPC lineup

- Active area size:  $1 \times 1 \text{ mm}^2$   
(larger size device under development)
- Pixel pitch: 100, 50, 25 $\mu\text{m}$   
Number of pixels/device: 100, 400, 1600
- Package: can or ceramic  
other package needs negotiation  
(and possibly additional cost)

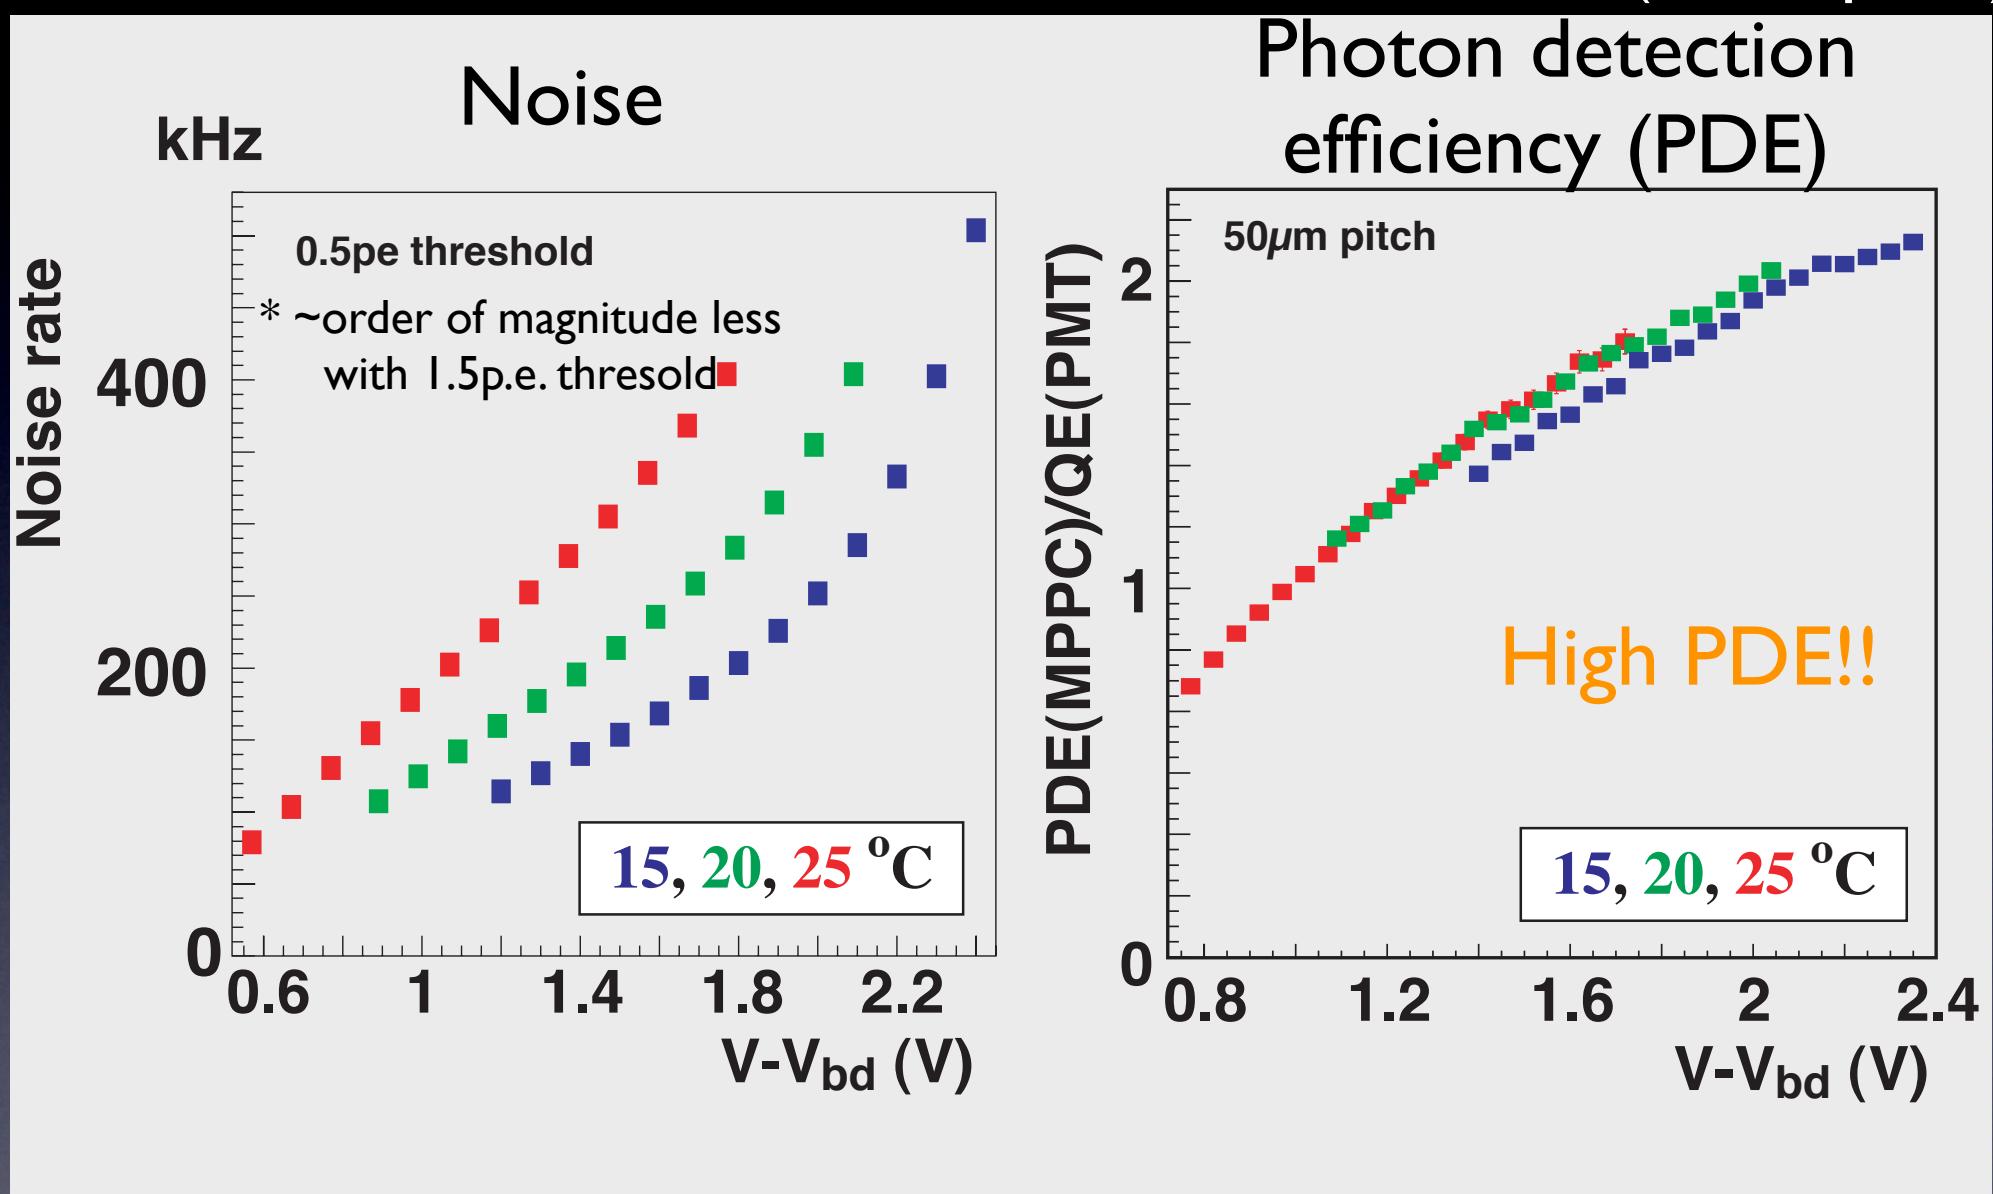

400 pixel  
(50um pitch)

# MPPC performance

400 pixel  
(50um pitch)

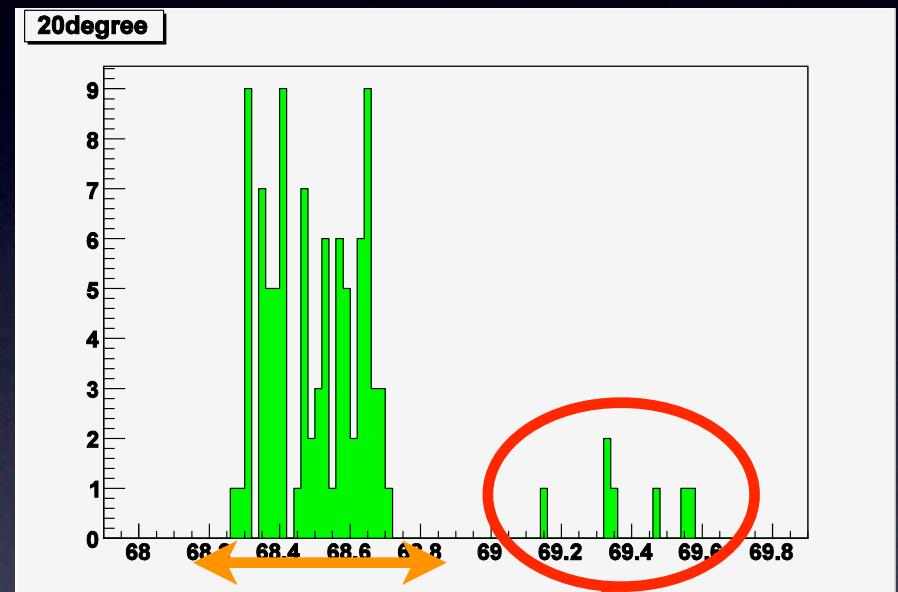

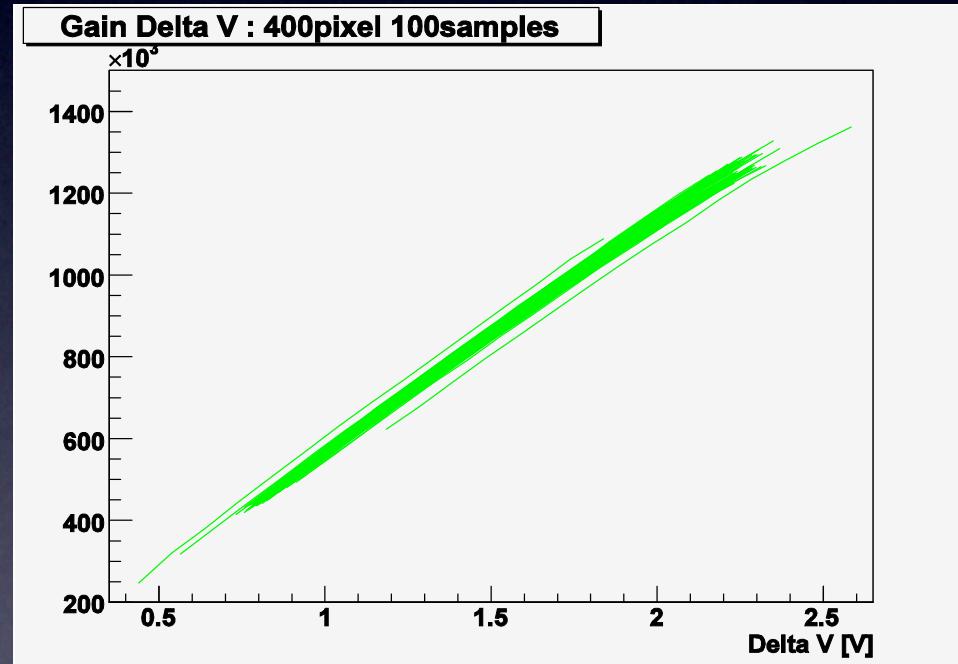

PMT: H8643,  
Green light from WLS (Y11)

# Mass-sample test

400 pixel, 100 samples

$V_{bd}$

Gain vs. ( $V - V_{bd}$ )

Consistent with  
test sheet from Hamamatsu

# Needs for T2K

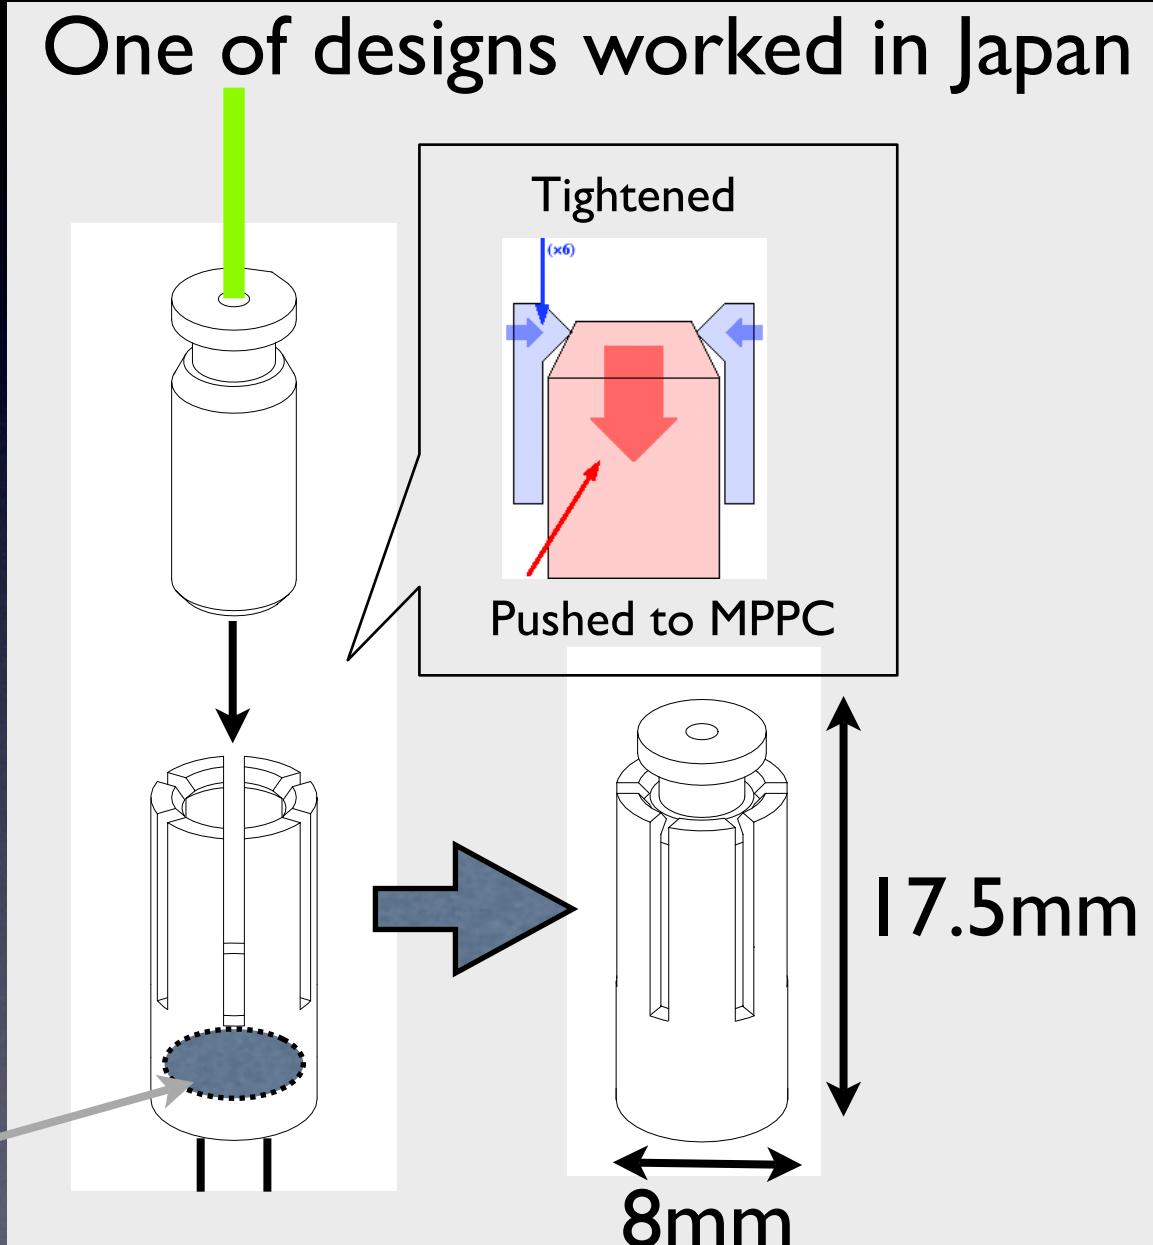

- Total number of devices: ~60,000
  - MRS-APD by CPTA will be also used for some of sub-det. (contribution from Russian collaborators)
- PDE > MA-PMT (used in K2K/SciBooNE)
- Number of pixel: ~500 (~100 for on-axis)
- Basic performance OK 😊 with current MPPC  
(although continuing improvement)
  - Active area: 1.2x1.2mm<sup>2</sup> to match 1.0mm dia. fiber  
(under development)
  - Cross-talk/after-pulse reduction

# Optical coupler

- Easy to handle
- Simple structure
- Compact (FGD has 1cm segmentation)
- Test sample just arrived

MPPC

# Works in progress

- Absolute PDE measurement
- Timing resolution
- Radiation hardness (gamma, proton, neutron)
- Aging effect
- Test with prototype scintillator
- .....
- Mass-production of MPPC for T2K  
(~50,000) will start this year!

Sounds interesting?

# International Workshop on new photon-detectors

# PD07

June 27-29, 2007 @ Kobe University, JAPAN

<http://www-conf.kek.jp/PD07/>

Deadline of abstract submission: April 30, 2007

## Main Topics

- Geiger-mode multi-pixel photon device
- Hybrid-PMT
- APD
- MCP-PMT
- New type of photon-sensors
- Applications of photon-sensors to  
High Energy Physics, Nuclear Physics,  
Cosmic-Ray Physics, Astronomy,  
Cosmology and Medical Science

© photo by MARL (<http://kobe-mari.maxs.jp>)

## International Programming Committee

H. Aihara (Tokyo), M. Danilov (ITEP), M. Demarteau (FNAL), B. Dolgoshein (MEPhI, Moscow), J. Haba (KEK),  
T. Iijima (Nagoya), K. Kawagoe (Kobe), Y. Kudenko (INR), M. Kuze (Tokyo Tech), T. Nakadaira (KEK),  
T. Nakaya (Kyoto), A. Para (FNAL), F. Retiere (TRIUMF), F. Sefkow (DESY), M. Shiozawa (ICRR), H. Shimizu (KEK),  
T. Takeshita (Shinshu), M. Teshima (Max-Planck), J. C. Vanel (LLR Ecole polytechnique)

## Local Organizing Committee

K. Hara (Nagoya), T. Iijima (Nagoya), K. Kawagoe (Kobe), M. Kuze (Tokyo Tech), K. Miyabayashi (Nara-WU),  
T. Matsumura (NDA), T. Nakaya (Kyoto), M. Yokoyama (Kyoto)

Detector Technology Project, IPNS, KEK  
Faculty of Science, Kobe University

Supported by JSPS Grant-in-Aid for Creative Scientific Research, "Research and Development  
of a Novel Detector System for the International Linear Collider", and MEXT Grant-in-Aid  
for Scientific Research on Priority Areas, "New Development of Flavor Physics"

# PD07

## Summary

June 27-29, 2007, Kobe University, JAPAN

<http://www-conf.kek.jp/PD07/>

Deadline of abstract submission: April 30, 2007

### Main Topics

- Geiger-mode multi-pixel photon device
- Hybrid-PMT
- APD
- MCP-PMT
- New type of photon-sensors

Applications of photon-sensors to  
Particle Physics, Nuclear Physics,  
Cosmic-Ray Physics, Astronomy,  
Cosmology and Medical Science

- MPPC is one of photo-sensors to be used in T2K-ND scintillator detectors
- Performance satisfies our requirement
- Preparation ongoing for start in Apr, 2009
- If you are interested, come to PD07 workshop in Kobe (June 27-29, 2007).

#### International Programming Committee

H. Aihara (Tokyo), M. Danilov (ITEP), M. Demarteau (FNAL), B. Dolgoshein (MEPhI, Moscow), J. Haba (KEK),  
T. Iijima (Nagoya), K. Kawagoe (Kobe), Y. Kudenko (INR), M. Kuze (Tokyo Tech), T. Nakadaira (KEK),  
T. Nakaya (Kyoto), A. Para (FNAL), F. Retiere (TRIUMF), F. Sefkow (DESY), M. Shiozawa (ICRR), H. Shimizu (KEK),  
T. Takeshita (Shinshu), M. Teshima (Max-Planck), J. C. Vanel (LLR Ecole polytechnique)

#### Local Organizing Committee

K. Hara (Nagoya), T. Iijima (Nagoya), K. Kawagoe (Kobe), M. Kuze (Tokyo Tech), K. Miyabayashi (Nara-WU),  
T. Matsumura (NDA), T. Nakaya (Kyoto), M. Yokoyama (Kyoto)

Detector Technology Project, IPNS, KEK  
Faculty of Science, Kobe University

Supported by JSPS Grant-in-Aid for Creative Scientific Research, "Research and Development of a Novel Detector System for the International Linear Collider", and MEXT Grant-in-Aid for Scientific Research on Priority Areas, "New Development of Flavor Physics"
