

Circumstances delayed us reaching our goals for the January meeting at SLAC. New LoI schedule accommodates a *little* slippage. But we need to get back on track.

Suggested goals:

- **Tools Ready**
 - Full tracking and vertexing sim ready
 - Track recon ready
 - PFA improved, useable, exercised
- **Global Parameters Chosen**
 - Pandora optimization studies reported
 - SiD PFA optimization studies reported
 - Costs vs performance updated
- **First Pass Subsystem Definitions**
 - What parameters must engineering have defined?
 - What parameters must GEANT4 have defined?
 - How will we choose system specs?
 - What studies must be done?
- **How do newcomers fit in? What needs doing?**
