# Heat load study of cryomodule in STF 

KEK
Norihito Ohuchi

## Contents

1. Introduction
2. Method of heat load estimation
3. Instrumentation for measurements
4. Heat load of components in the STF module
5. Comparison with heat loads in RDR
6. Summary

## Introduction

- Cold test of the STF cryomodule with 4 cavities have been done from May 20 May to now with being warmed up twice.
- The heat load measurements;
- 28 May ~ 6 June : DC heat load measurements without warm couplers
- 8 Oct. ~ 17 Oct. : DC heat load measurements
- 5 Nov. $\sim 7$ Nov. : $\mathrm{Q}_{0}$ measurements

## Measurement method of heat load

- Total heat load at specific temperature level
- 2K : evaporation rate of 2 K liquid helium
- Measurement of the mass flow rate of the evaporated 2 K LHe.
- Keeping the liquid helium level in the 2 K LHe supply pipe and the cavity-vessels, and attaining the steady state condition for the evaporation rate of 2 K LHe and temperature profile in the module.
- 5K : temperature rise of 5K shield
- Measuring the speed of the temperature rise of the 5 K shield after stopping cooling.
- 80K : temperature rise of 80 K shield
- Measuring the speed of the temperature rise of the 80K shield after stopping cooling.
- Heat load of the component at specific temperature level
- Calculation from the measured temperature profile in the cryomodule

## Instrumentations for thermal measurements

- Mass flow meter
- 2 volumetric flow meter (at the discharge side of the pump and at the ambient pressure)
- Pressure sensor
- 3 absolute pressure sensors (at 2 K LHe vessel in the 2 K cold box and GRP)
- 4 pressure sensors
- Temperature sensors for cryomodule

|  | Cernox <br> $(1.5 \mathrm{~K}<\mathrm{T}<\mathbf{1 0 0 K})$ | PtCo <br> $(4 \mathrm{~K}<\mathrm{T}<300 \mathrm{~K})$ | CC thermocouple <br> $(70 \mathrm{~K}<\mathrm{T}<300 \mathrm{~K})$ |

## Heat load measurement by 2 K LHe evaporation

Thermal condition of the system during measurement
No supply of LHe
Controlling the pressure of 2 K LHe constant
The LHe level changed but stayed in the supply pipe.
Measured mass flow rate during the measurement $=8.67 \mathrm{~m}^{3} / \mathrm{h}(=0.40 \mathrm{~g} / \mathrm{s})$
Heat load $=9.21 \mathrm{~W}$
(including 2 K cold box and transition between the 2 K cold box and the cryomodule) Heat load of cryomodule $=4.94 \mathrm{~W}$

## Heat loads measured by temperature rises of the 5 K and 80K shields

Average temperature rise of 5 K shield
6.7 K -> 22.9 K for 30 min

Cold mass of 5 K shield $=190 \mathrm{~kg}$ Heat load at 5 K shield=8.21 W

Average temperature rise of 80 K shield 89.45 K -> 92.76 K for 90 min Cold mass of 80 K shield $=220 \mathrm{~kg}$ Heat load at 80 K shield=64.9 W

## Heat load: Support posts

Measured temperature profile of STF module

GRP upper surface $=3.82 \mathrm{~K}$
GRP lower surface $=2.02 \mathrm{~K}$

Condition of the calculation
$-\mathrm{T}_{1}=300 \mathrm{~K}, \mathrm{~T}_{3}=5 \mathrm{~K}, \mathrm{~T}_{4}=2 \mathrm{~K}$ (Fixed)
$-T_{2}=$ parameter for calculation

$$
\begin{aligned}
& \mathrm{T}_{2}=85.4 \mathrm{~K} \\
& 80 \mathrm{~K}: 5.4 \mathrm{~W} \\
& 5 \mathrm{~K}: 0.77 \mathrm{~W} \\
& 2 \mathrm{~K}: 0.12 \mathrm{~W}
\end{aligned}
$$

## Heat load: Input Coupler

Measured temperature profile of STF module

2.9 K

Condition of the calculation
$-T_{1}=300 \mathrm{~K}, \mathrm{~T}_{3}=5 \mathrm{~K}, \mathrm{~T}_{4}=2 \mathrm{~K}$ (Fixed)
$-T_{2}=$ parameter for calculation

$$
\begin{gathered}
\mathrm{T}_{2}=101.3 \mathrm{~K} \\
80 \mathrm{~K}: 1.64 \mathrm{~W} \\
5 \mathrm{~K}: 1.5 \mathrm{~W} \\
2 \mathrm{~K}: 0.04 \mathrm{~W}
\end{gathered}
$$

## Heat load: Cables

- RF cables
- 2 HOM couplers and 1 monitor (thermal anchored with 80K shield)
- 1 input coupler monitor (connected to the part at 80 K )
- Piezo and load sensor cables
- Cables to cavity-vessel (no-thermal anchored with 80K shield)
- Temperature sensor cables
- Cernox sensors for cavities (no-thermal anchored with 5K and 80K shields)
- Cernox sensors for input couplers (thermal anchored with 5 K and 80 K shields)
- PtCo sensors (thermal anchored with 5K and 80K shields)
- CC sensors for GRP (thermal anchored with 5K and 80K shields)

Average temperatures of 5 K and 80 K shields
5 K shield= $5.11 \mathrm{~K}, 80 \mathrm{~K}$ shield= 86.5 K
Heat loads of cables at specific temperature levels for 4 cavities (W)

|  | 2 K | 5 K | 80 K |
| :---: | :---: | :---: | :---: |
| RF cables | 2.48 | NA | 7.92 |
| Peizo cables | 1.68 | NA | NA |
| Temp. cables | 0.08 | 0.55 | 0.42 |

## Static heat loads of the STF cryomodule (4 cavities), W

|  | 2 K | 5 K | 80 K |
| :---: | :---: | :---: | :---: |
| Measured | 4.9 | 8.2 | 64.9 |
| RF cables | 2.48 | 0 | 7.92 |
| Piezo cables | 1.68 | 0 | 0 |
| Temp. cables | 0.08 | 0.55 | 0.42 |
| Input couplers | 0.17 | 5.98 | 6.56 |
| Tuner drive shafts | 0.48 | 0 | 0 |
| Beam pipe | 0.01 | 0.14 | 0.70 |
| Thermal radiation | $\sim 0$ | 0.76 | 20.4 |
| Support posts | $(0.24)$ | 1.54 | 10.8 |
| Sum. of comp. | $4.90(5.14)$ | 8.97 | 46.8 |

Thermal flux density by thermal radiation:
from 80 K to 5 K with 10 layers of $\mathrm{MLI}=0.05 \mathrm{~W} / \mathrm{m}^{2}$
from 300 K to 80 K with 30 layers of $\mathrm{MLI}=1.0 \mathrm{~W} / \mathrm{m}^{2}$

Recalculation of static heat loads of the 9-cavity-module, W

|  | 2 K | 5 K | 80 K |
| :---: | :---: | :---: | :---: |
| RF cables | 5.58 | 0 | 17.82 |
| Piezo cables | 3.78 | 0 | 0 |
| Temp. cables | 0.18 | 1.24 | 0.95 |
| Input couplers | 0.38 | 13.46 | 14.76 |
| Tuner drive shafts | 1.08 | 0 | 0 |
| Beam pipe | 0.01 | 0.14 | 0.70 |
| Thermal radiation | $\sim 0$ | 1.71 | $45.9 / 91.8$ |
| Support posts | 0.36 | 2.31 | 16.2 |
| Sum. of comp. | 11.37 | 18.86 | $96.3 / 142.2$ |

## Comparison between RDR and STF

|  | RDR | STF-exp |
| :---: | :---: | :---: |
| Supports | 0.6 | 0.36 |
| Input Couplers | 0.17 | 0.38 |
| HOM cables and coaxial cables | 0.13 | 9.54 |
| HOM absober | 0.14 |  |
| Current leads | 0.28 |  |
| Tuner drive shafts |  | 1.08 |
| Moters |  |  |
| Sum | 1.32 | 11.37 |
| Radiation | 1.41 | 1.71 |
| Supports | 2.4 | 2.31 |
| Input Couplers | 1.73 | 13.46 |
| Diagnostic cables | 1.39 | 1.24 |
| HOM absober | 3.13 |  |
| Current leads | 0.47 |  |
| HOM cables | 0.29 |  |
| Sum | 10.82 | 18.86 |
| Radiation | 3249 | 459/918 |
| Supports | 18 | 16.2 |
| Input Couplers | 16.47 | 14.76 |
| HOM nables | 1.84 | 1782 |
| Current leads | 4.13 |  |
| Diagnostic cables | 5.38 | 0.95 |
| Sum | 75.04 | 96.3/142.2 |
