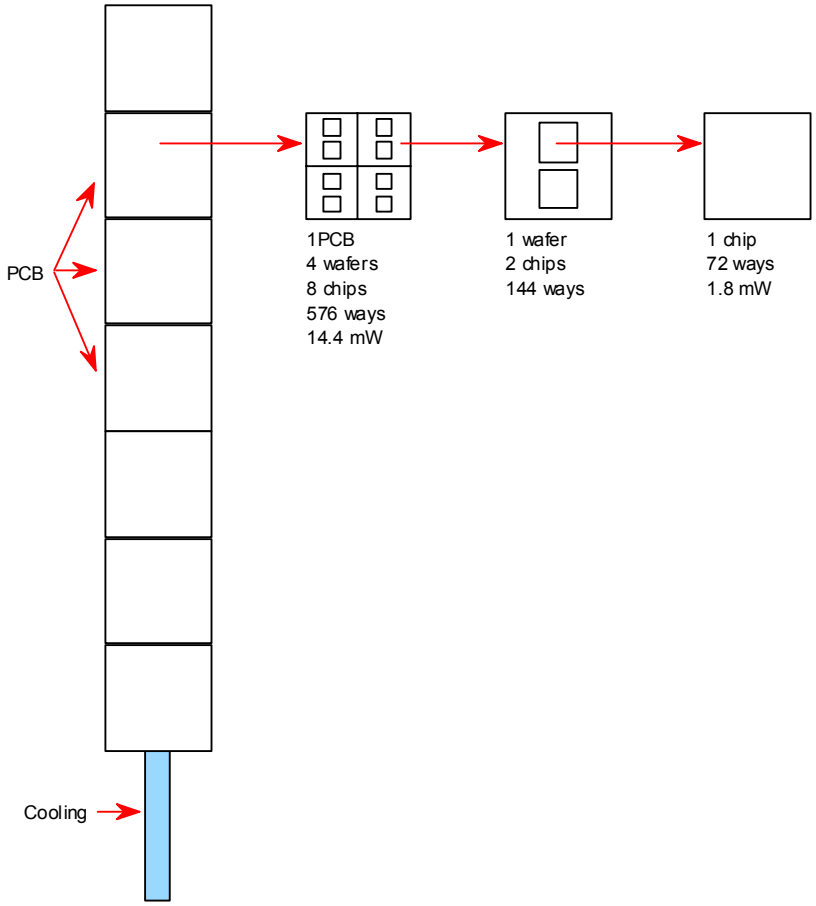
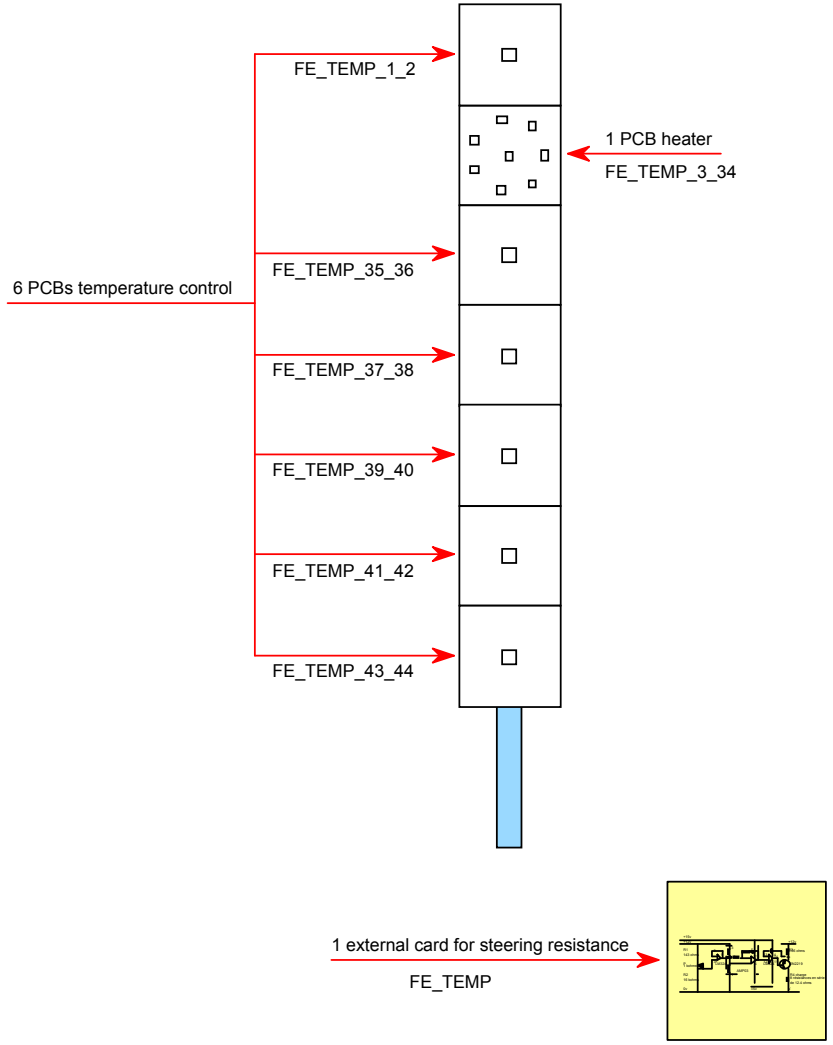
Realization of slab model, to simulate the heat dissipation of chips in a slab EUDET in order to valid the future cooling system



To simulate the slab heat dissipation, we decided to use resistances with a temperature control

The choice is to manufacture:
1 PCB able to simulate the power down to 14.4 mW (1PCB) and power up to 1 W (>7 PCBs)
6 PCBs for temperature control
1 external card for steering resistance



PCB heater

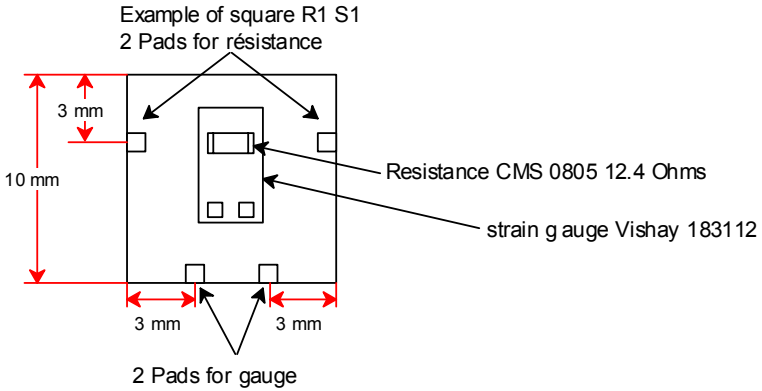
1 card: FE_TEMP_3_34

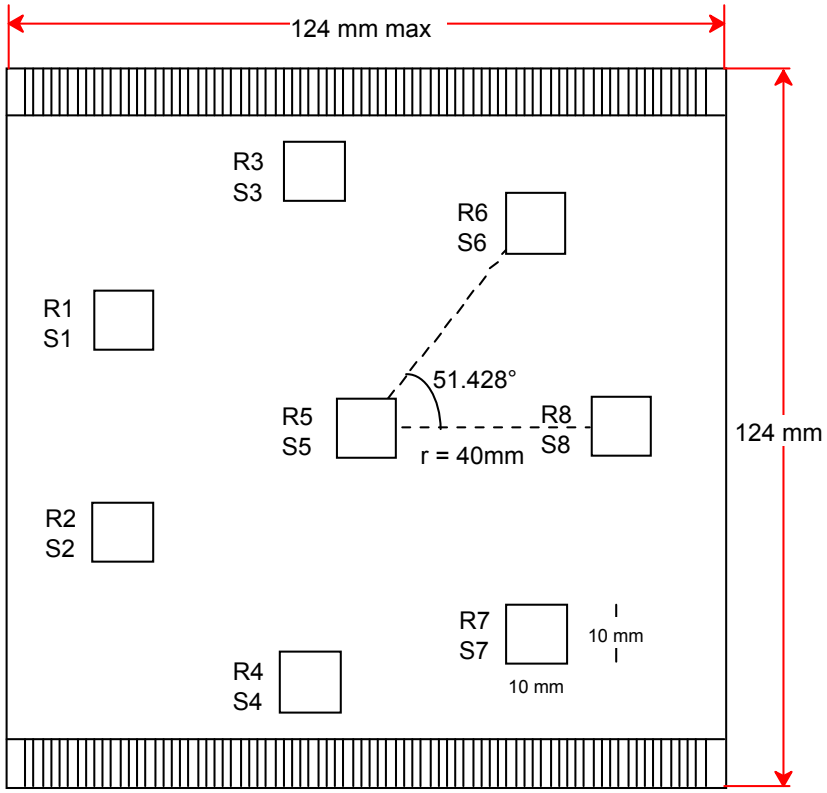
Dimensions:

- Thickness = 0.8 mm
- Width = maximum 124 mm
- Length = 124 mm

With 8 squares de 10 x 10 mm max as depth as possible

- 4 electric tracks by square,
  - 2 for resistance
  - 2 for gauge





PCBs temperature control

6 cards:

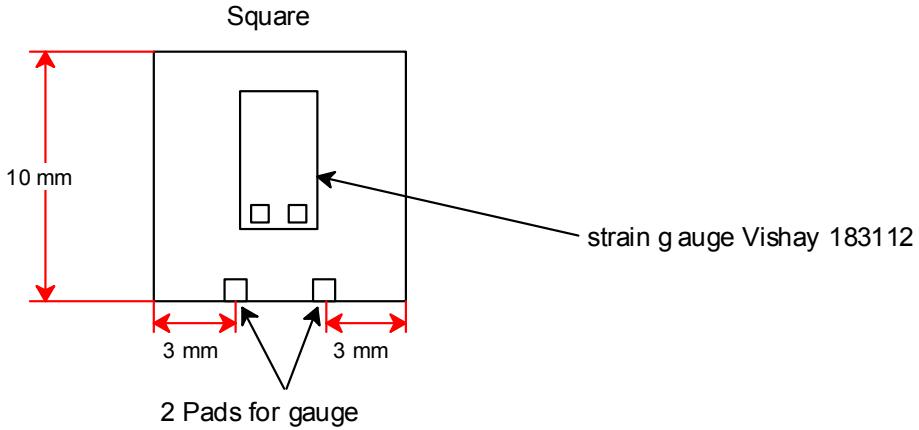
- FE_TEMP_1_2
- FE_TEMP_35_36
- FE_TEMP_37_38
- FE_TEMP_39_40
- FE_TEMP_41_42
- FE_TEMP_43_44

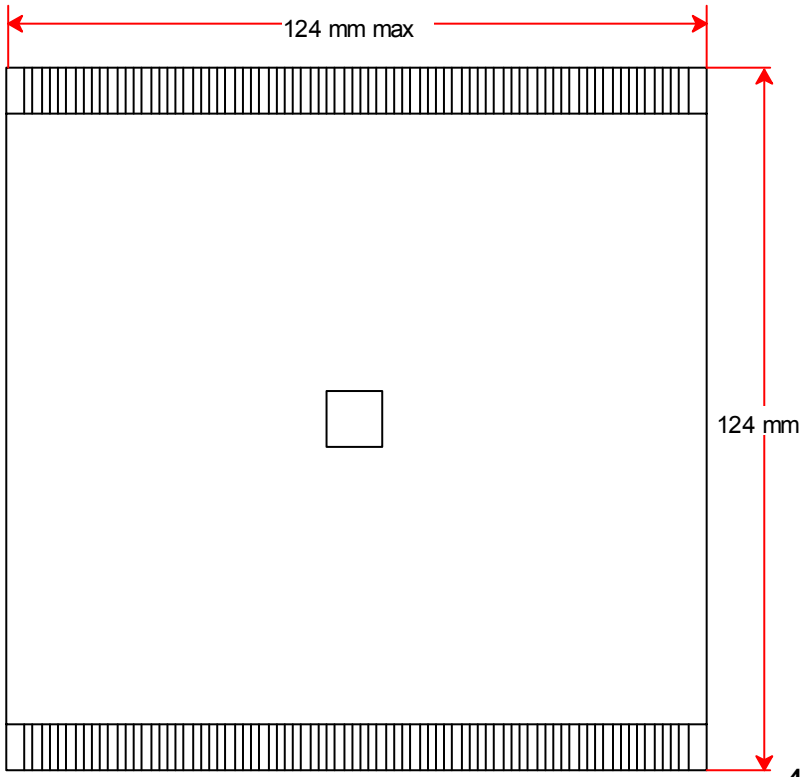
Dimensions:

- Thickness = 0.8 mm
- Width = maximum 124 mm
- Length = 124 mm

With 1 square de 10 x 10 mm max as depth as possible

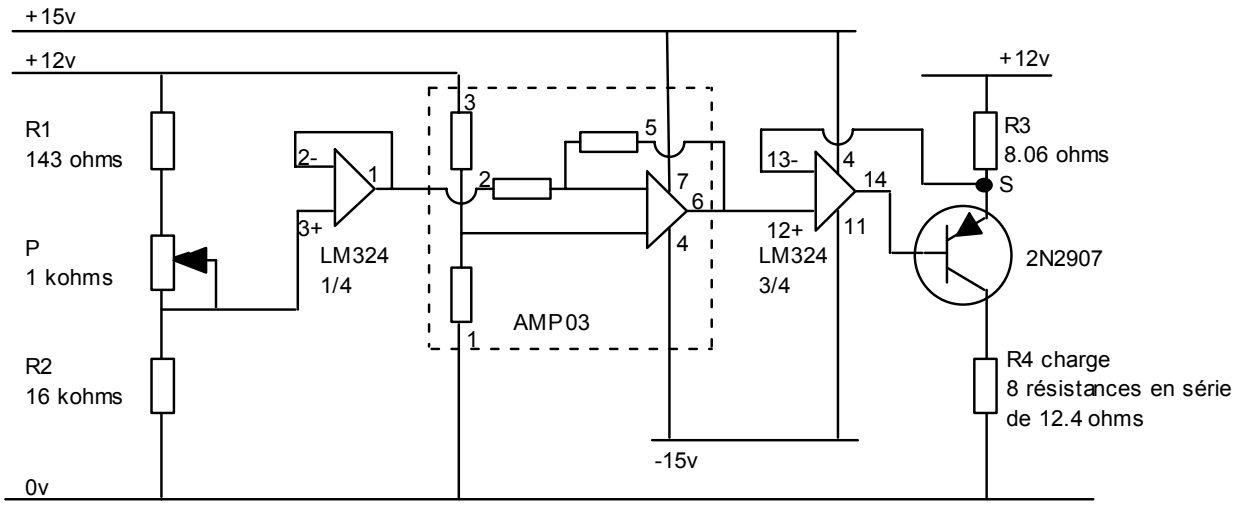
- 2 electric tracks for gauge





Steering card for resistances

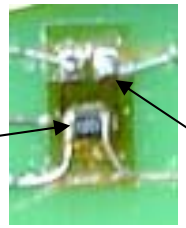
1 external card: FE_TEMP

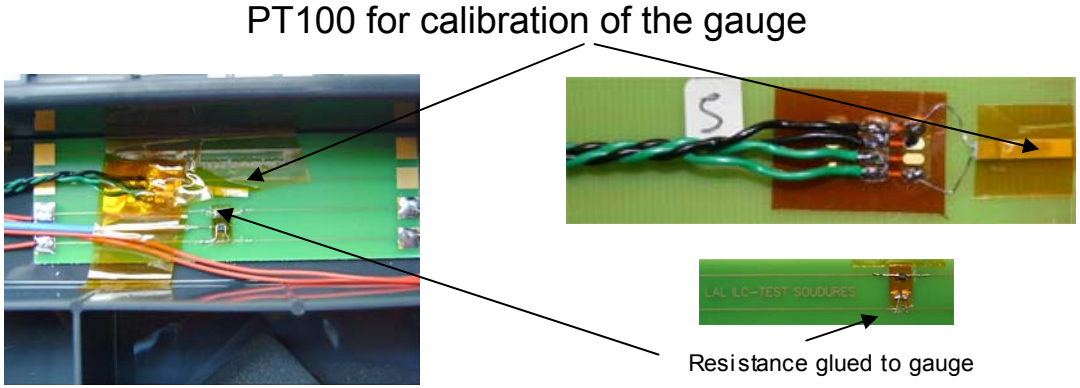


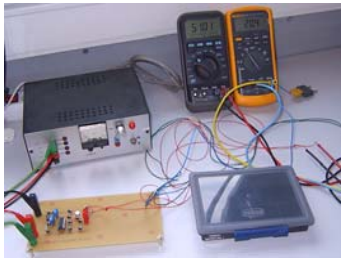
Measures carried out between S point and 0v, the power is adjust by the potentiometer (P)
U for Imax = 11.9v
U for Imin = 11.2v
Pmax for PCB 8 chips = 1W
Pmin for PCB 8 chips = 14.4 mW

Test and measurement

A strain gauge Vishay (reference 183112) is glued on the PCB and the resistance which simulates the chip, is directly bonded to the gauge.



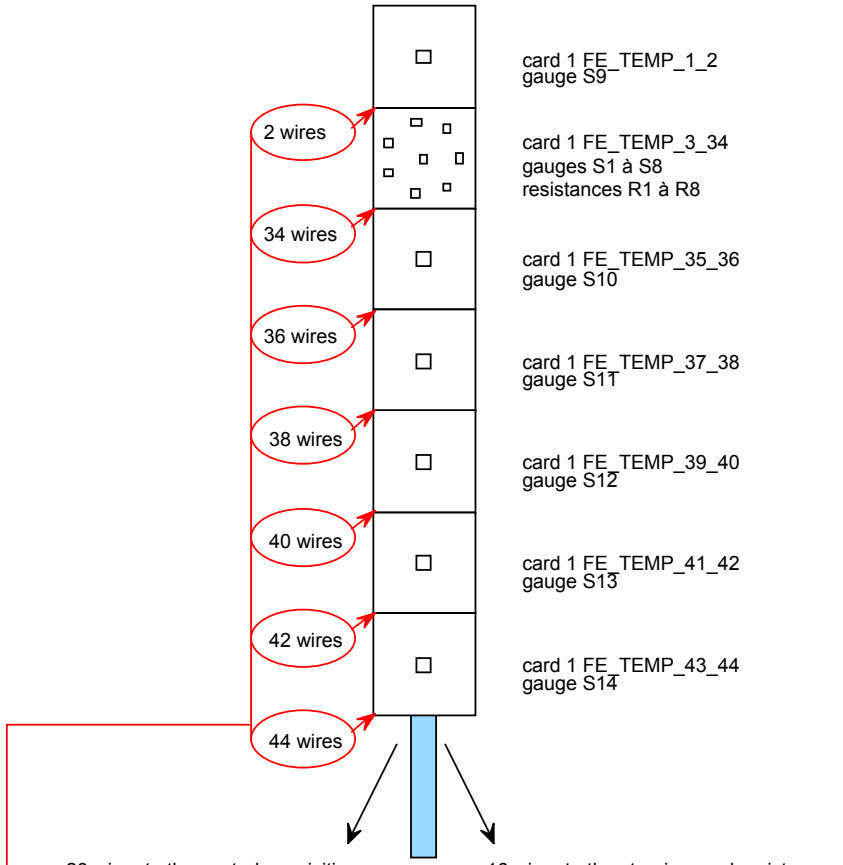




Steering resistance system

Temperature acquisition system

Cards assembling in slab model

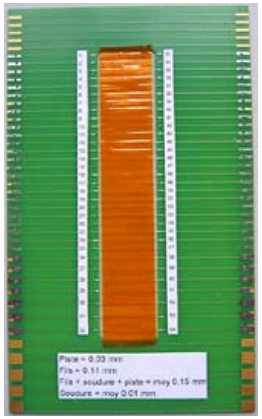


To achieve the interconnections between the PCBs, we use capton combs

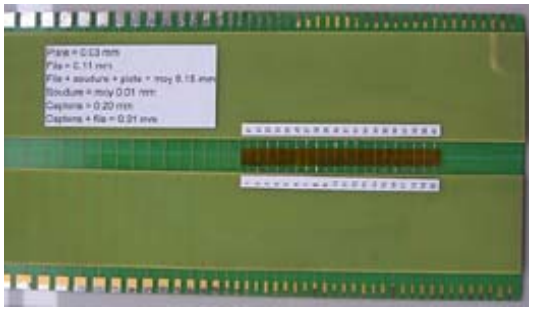
Tests of capton combs

The combs are made by positioning the wires on a layer of capton scotch and covered by another layer of capton scotch.
Then the wire are solder alternately starting with wire n° 1 and n° 10, 20, 2, 11, 21…
Soldering iron used: Weller ws50 at 350°C
The temperature is controlled step by step with PT100 placed on the top and on the bottom (wafers side)

Step 1
Comb 20 ways
Capton width = 19 mm
Wire = 0.25 mm
Track = 0.03 mm
Wire + solder + track = moy 0.29 mm
Solder = moy 0.01 mm



Step 2
Comb 32 ways
Capton width = 19 mm
Wire = 0.11 mm
Track = 0.03 mm
Wire + solder + track = moy 0.15 mm
Solder = moy 0.01 mm



Step 3
Comb 20 ways
Capton width = **5 mm**
Wire = 0.11 mm
Track = 0.03 mm
Wire + solder + track = **moy 0.15 mm**
Solder = moy 0.01 mm
T max relieved on the top = **45.6 °C**
T max relieved on the lower side wafers = **42.5 °C**
