

Analysis of electromagnetic showers in CALICE Analog Hadron Calorimeter prototype (AHCAL)

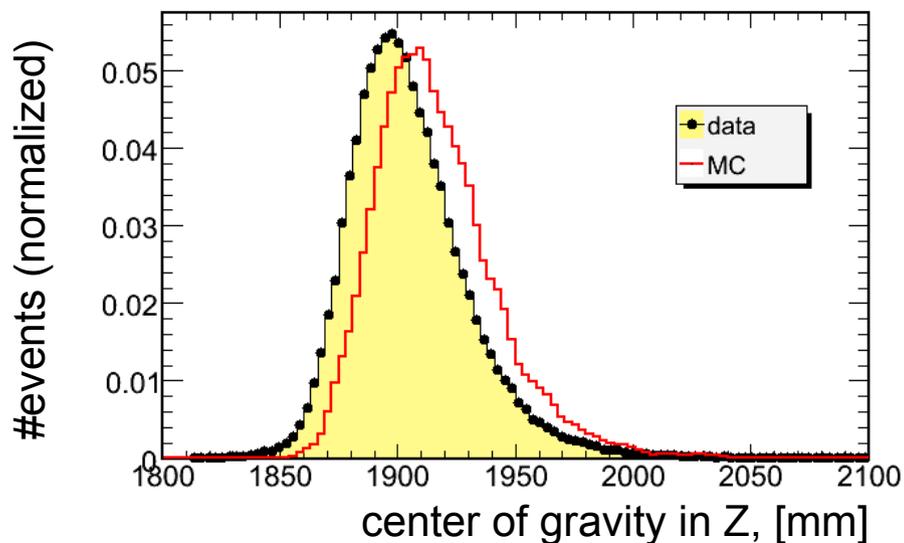

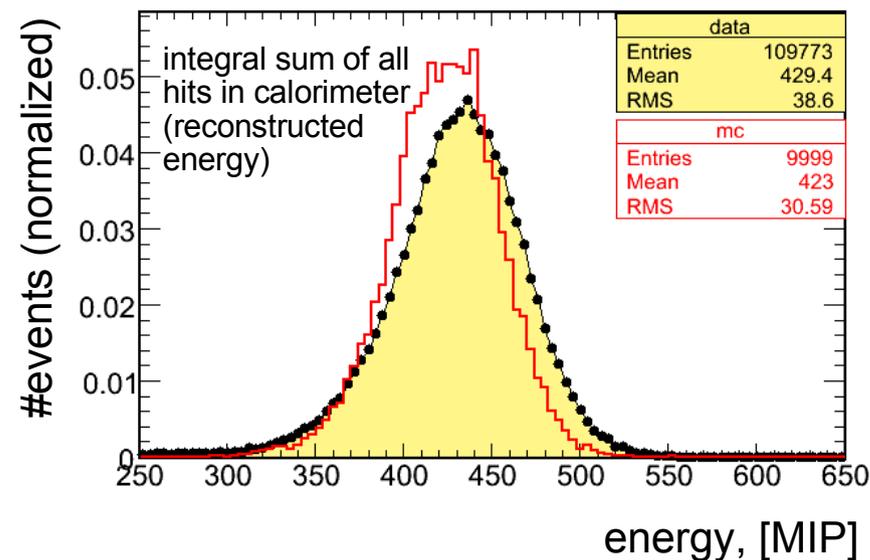

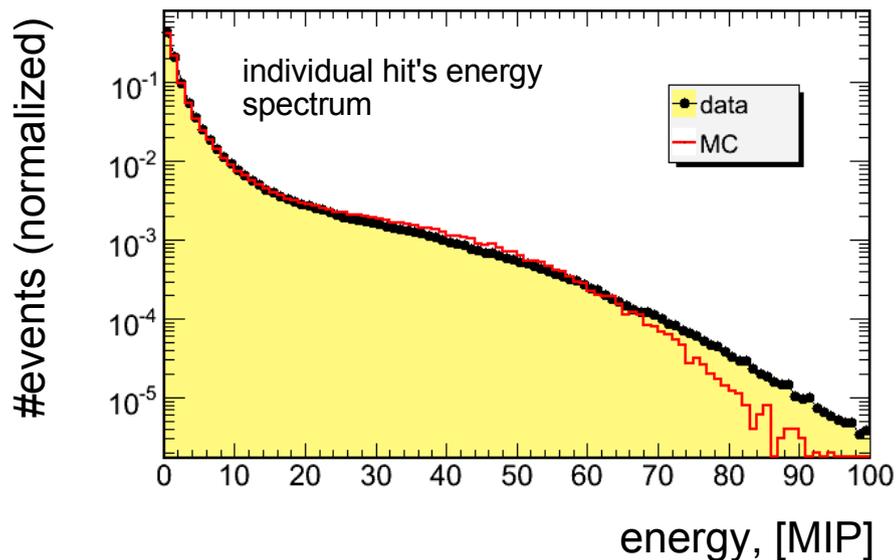

Sergey Morozov

DESY, Hamburg

Analysis of electromagnetic showers in CALICE AHCAL prototype

exp (black) and MC (red) with re-scaled saturation and temperature correction

The main problem of MC so far:

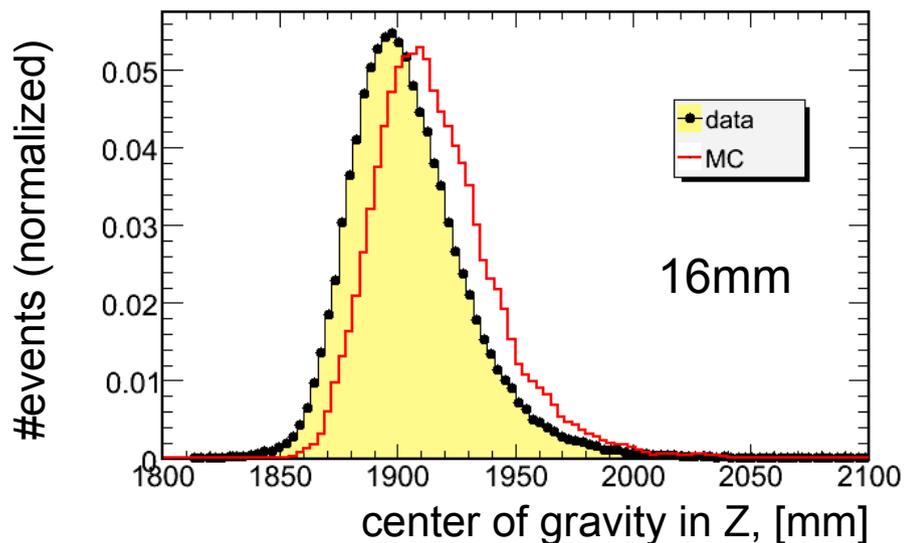

- the geometrical position of an e/m shower is shifted w.r.t. the data.

Uncertainties in integral spectrum (1.5%) is within expected region (2% expected).

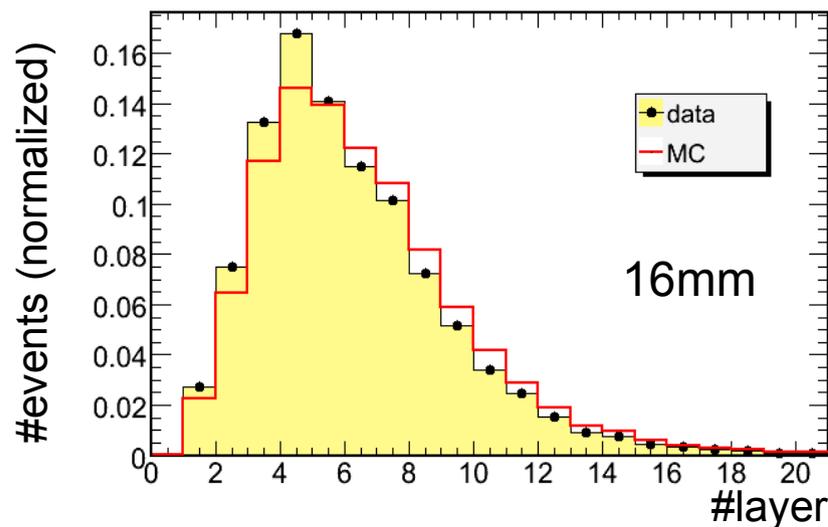

Analysis of electromagnetic showers in CALICE AHCAL prototype

exp (black) and MC (red) + measured thickness of each layer (new Layers)

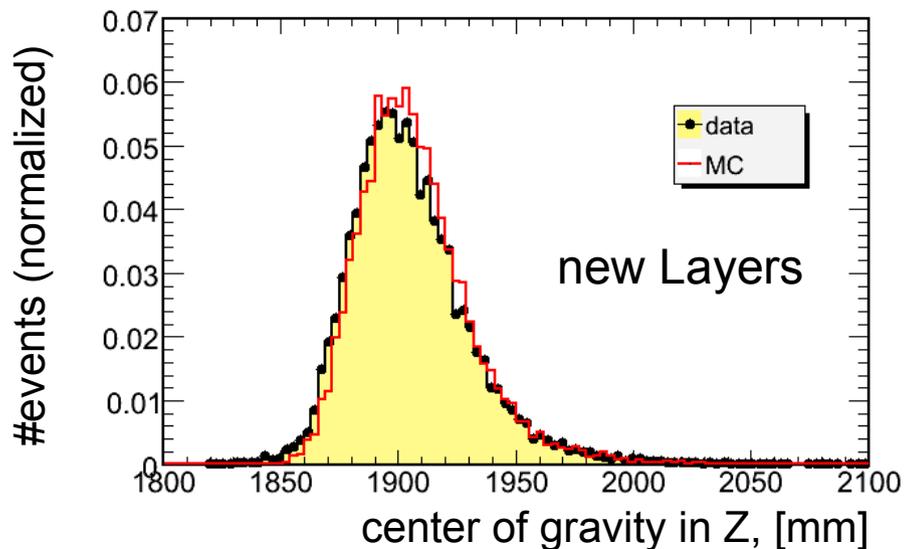

shower center of gravity in Z (beam) direction

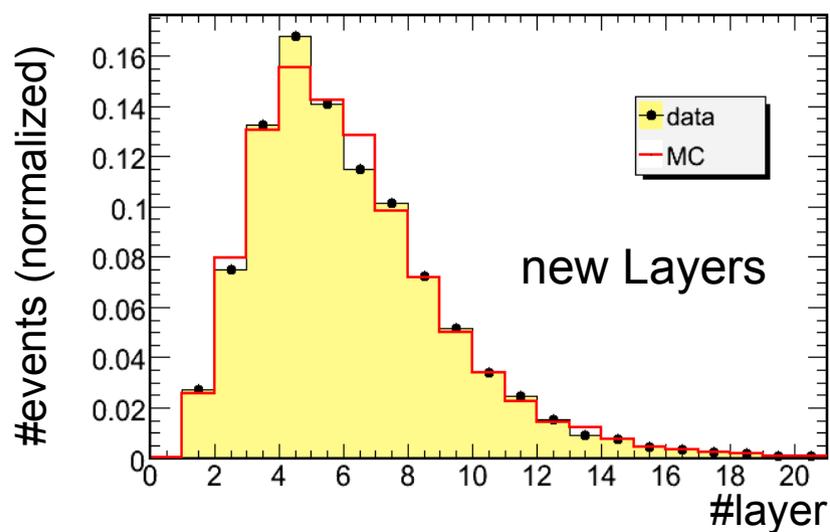

energy profile of a shower

shower center of gravity in Z (beam) direction

energy profile of a shower

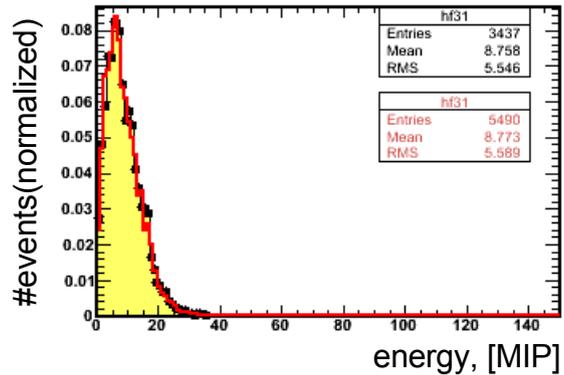

Analysis of electromagnetic showers in CALICE AHCAL prototype

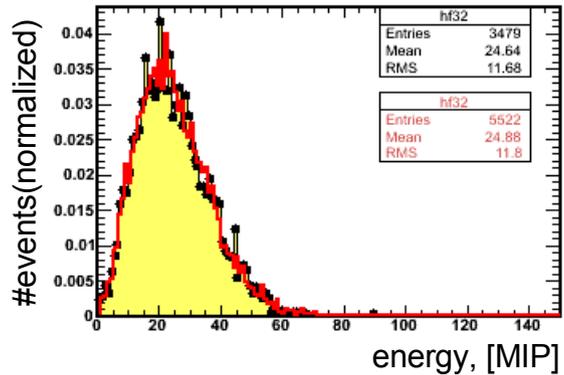

tile in the shower core (49/52) for various layers

all corrections included data (black) and MC (red)

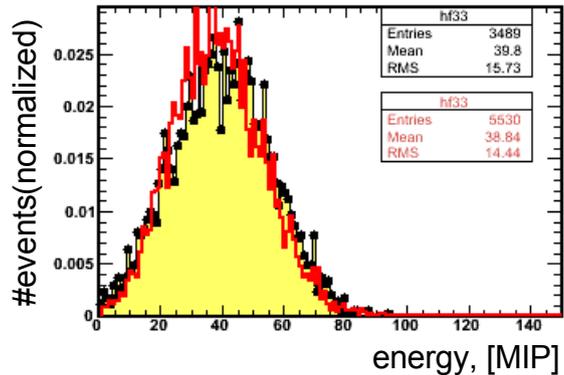

49/52 Layer 1

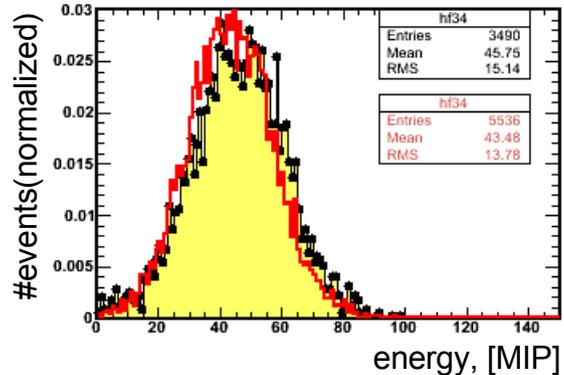

49/52 Layer 2

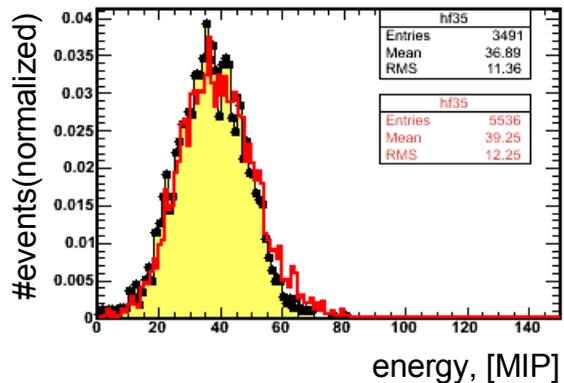

49/52 Layer 3

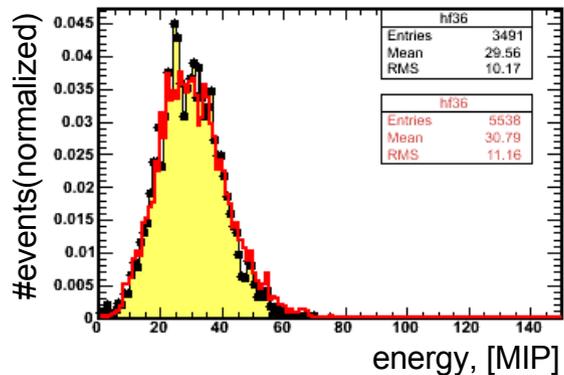

49/52 Layer 4

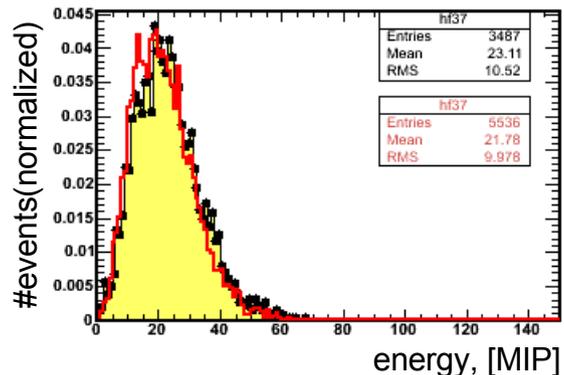

49/52 Layer 5

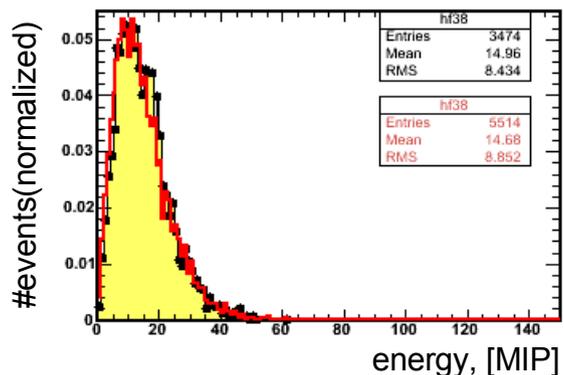

49/52 Layer 6

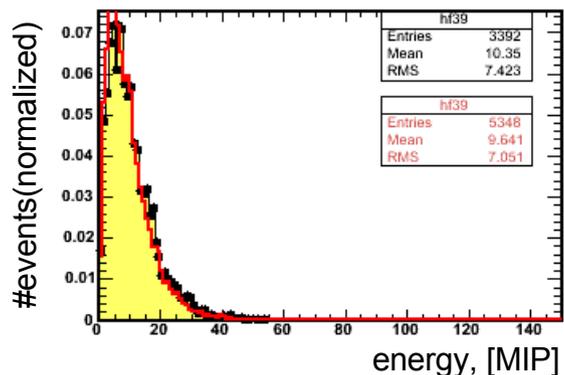

49/52 Layer 7

49/52 Layer 8

49/52 Layer 9

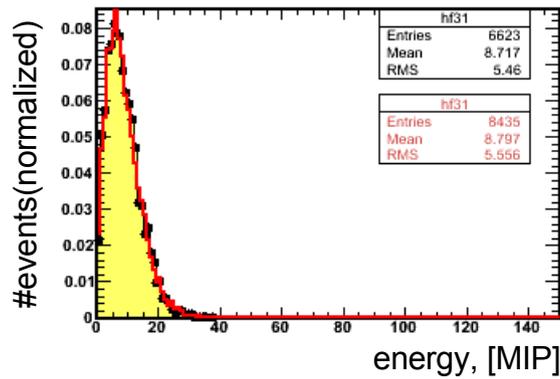

Analysis of electromagnetic showers in CALICE AHCAL prototype

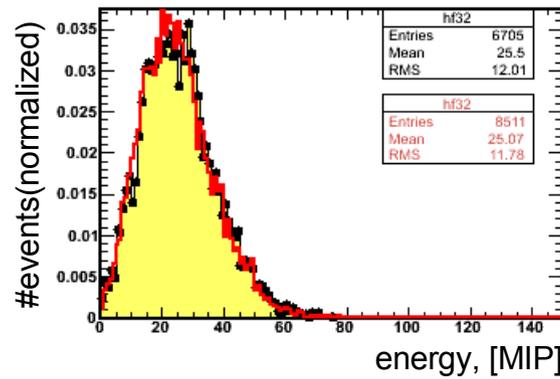

tile in the shower core (52/52) for various layers

all corrections included data (black) and MC (red)

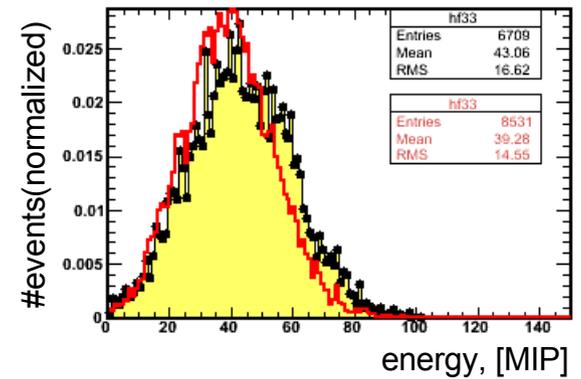

52/52 Layer 1

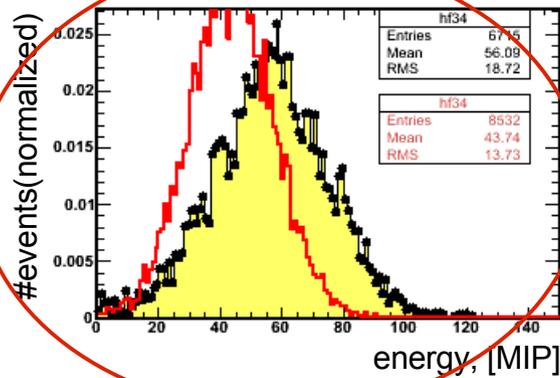

52/52 Layer 2

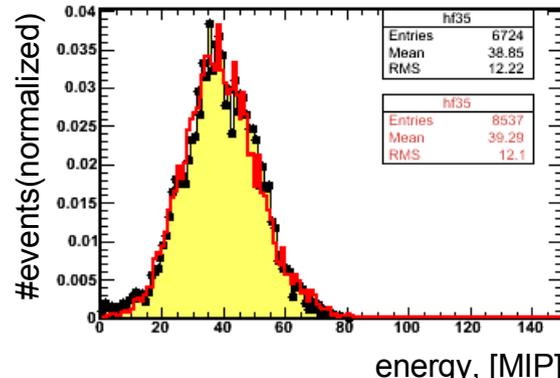

52/52 Layer 3

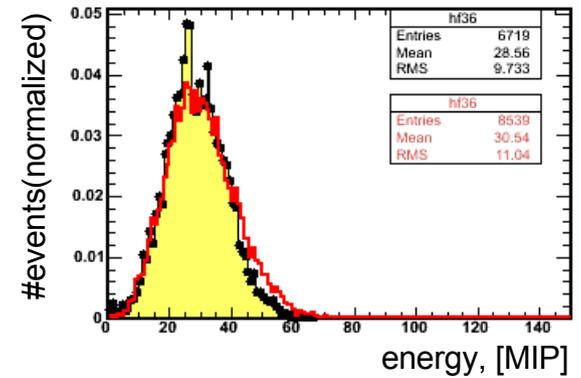

52/52 Layer 4

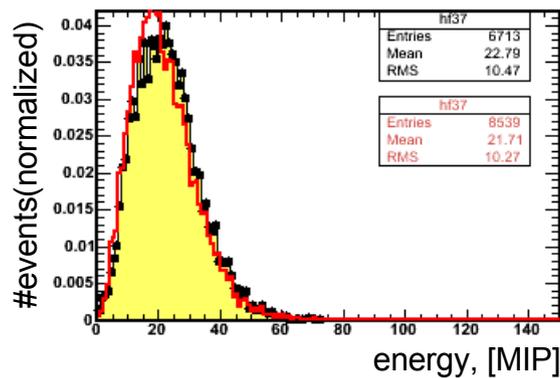

52/52 Layer 5

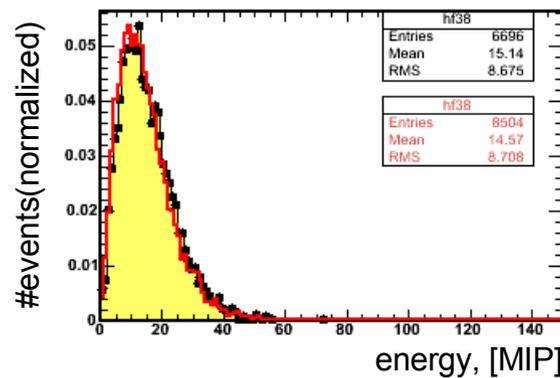

52/52 Layer 6

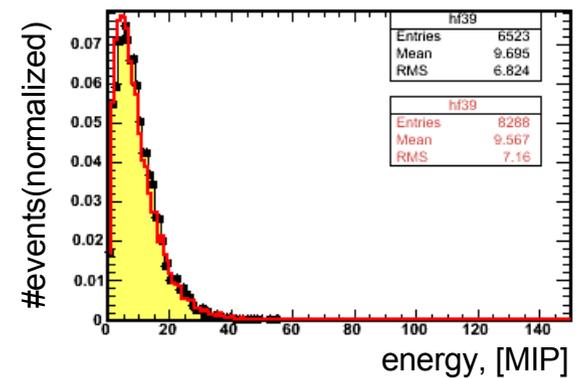

52/52 Layer 7

52/52 Layer 8

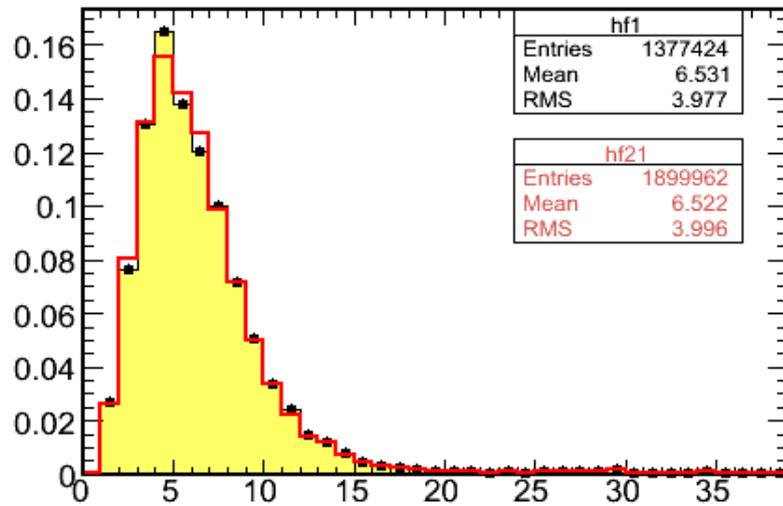

52/52 Layer 9

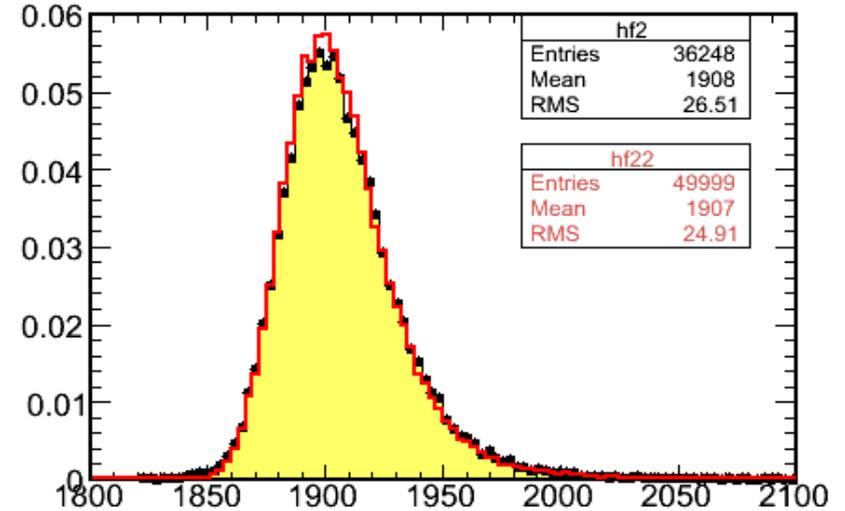

Analysis of electromagnetic showers in CALICE AHCAL prototype

exp (black) and MC (red) + measured thickness of each layer (new Layers)

ahc_nHits_data

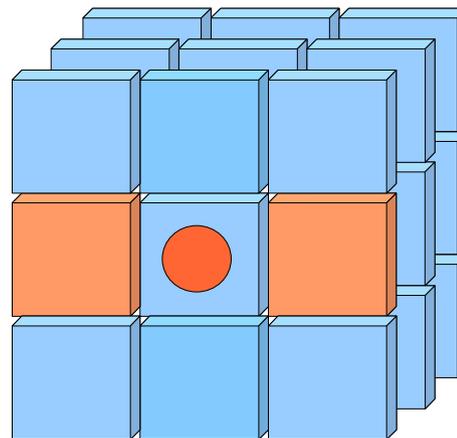

Analysis of electromagnetic showers in CALICE AHCAL prototype

Check the 3x3 tile tower in a core of a shower

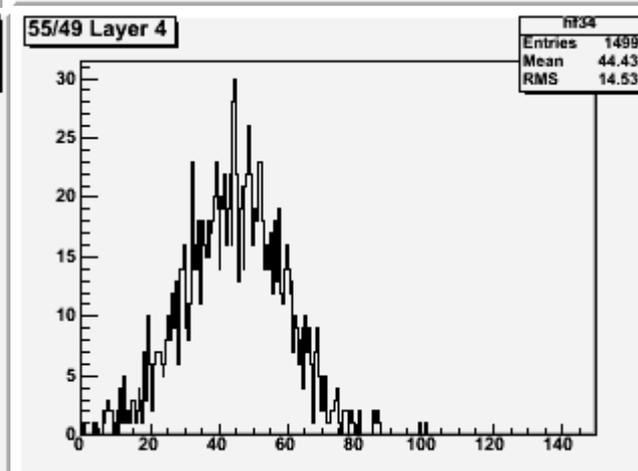

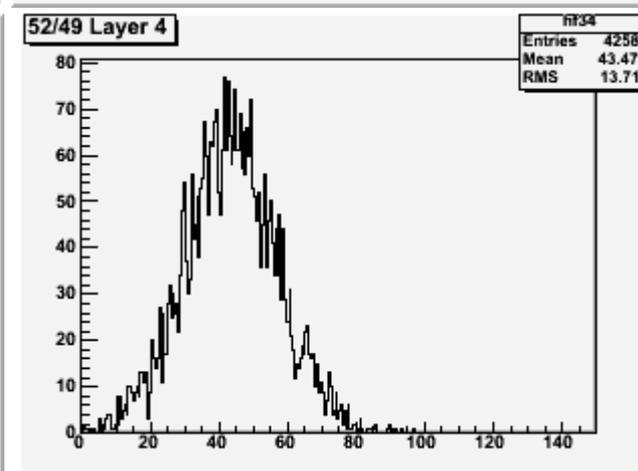

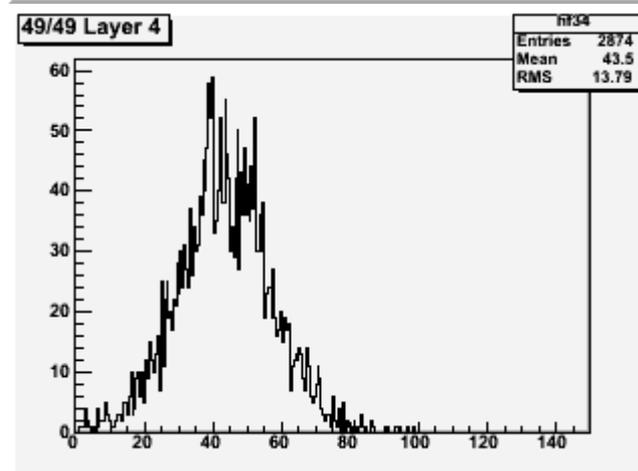

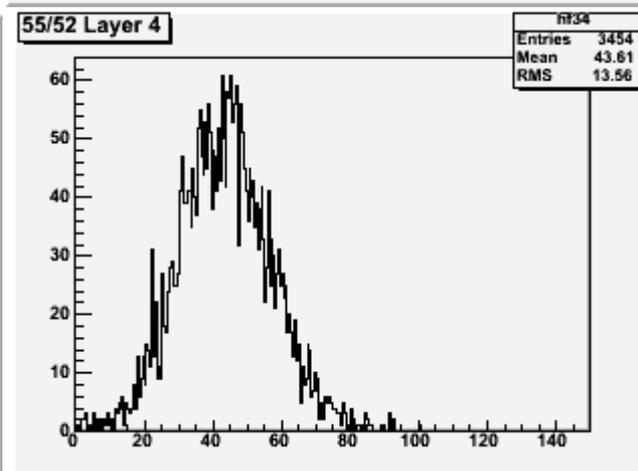

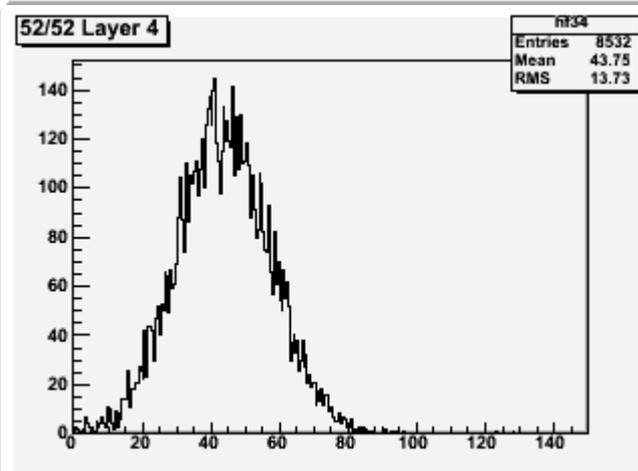

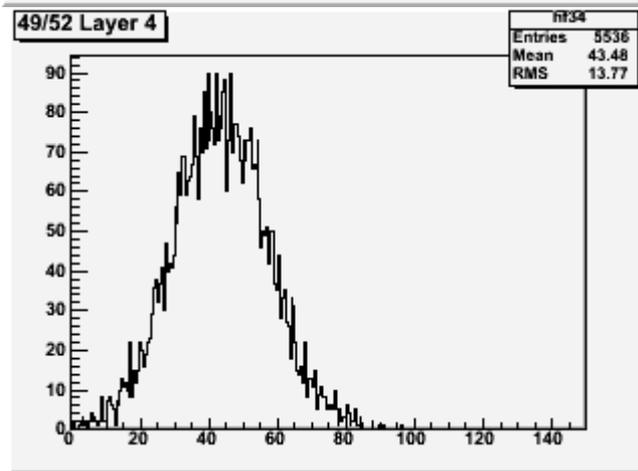

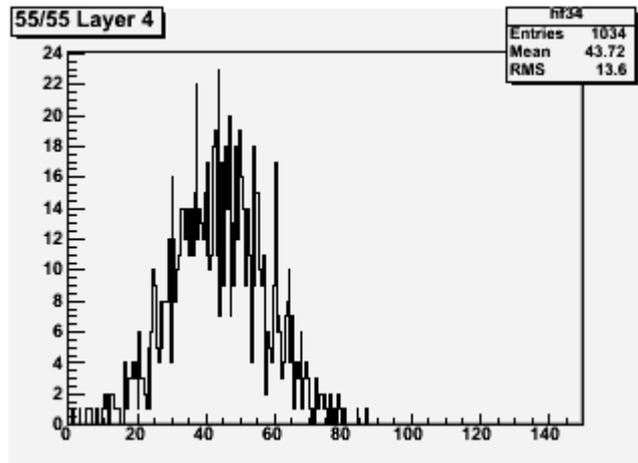

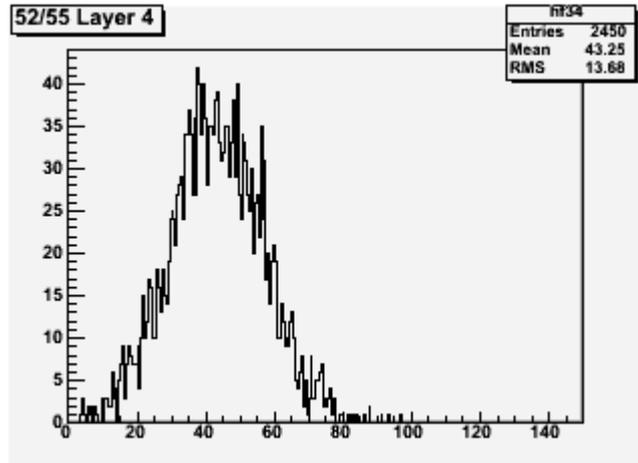

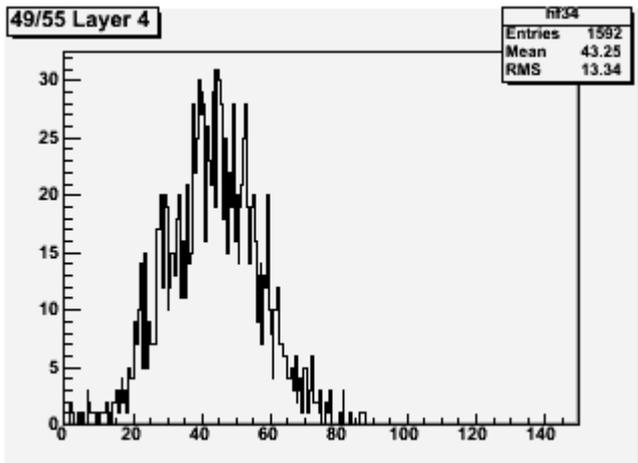

“in center” - beam spot 1cm
of radius in the center of tile

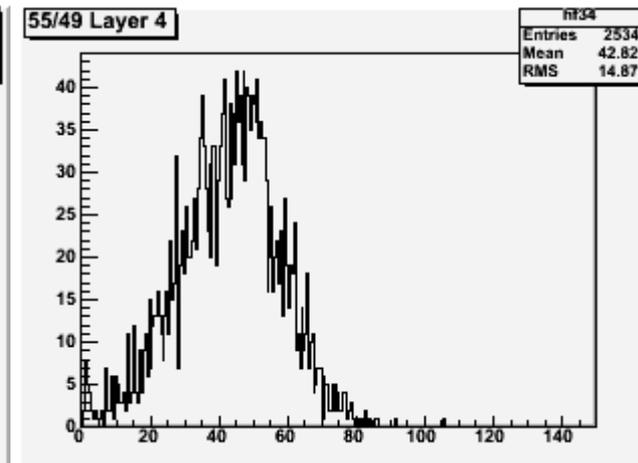

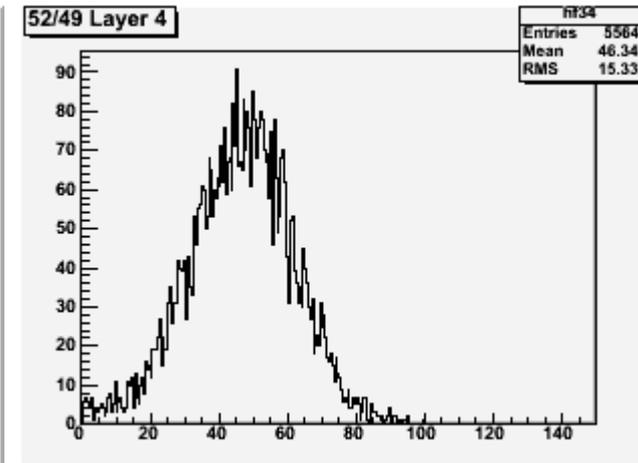

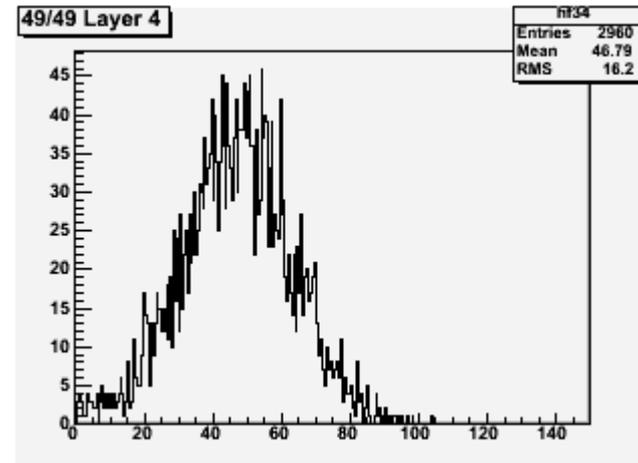

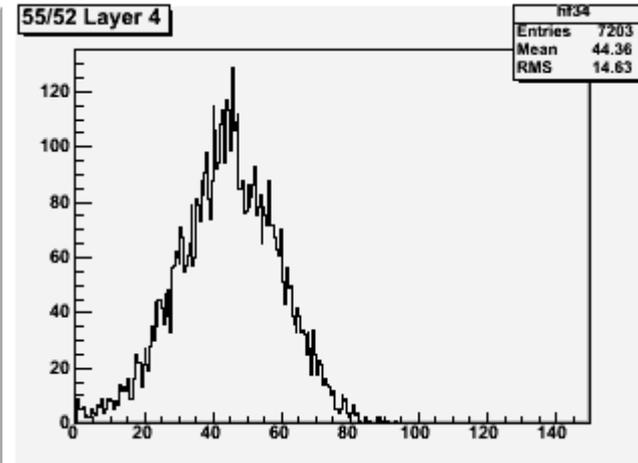

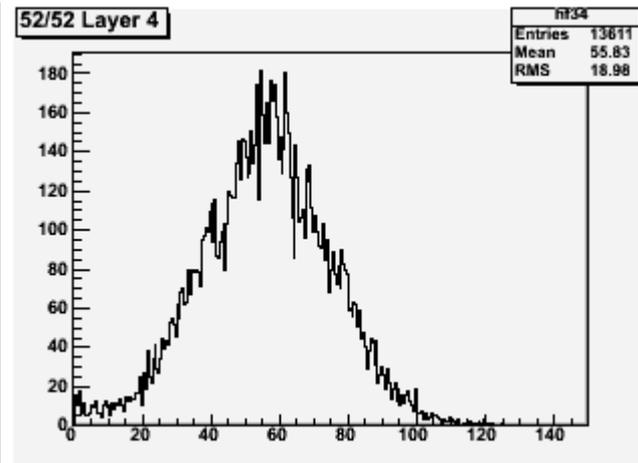

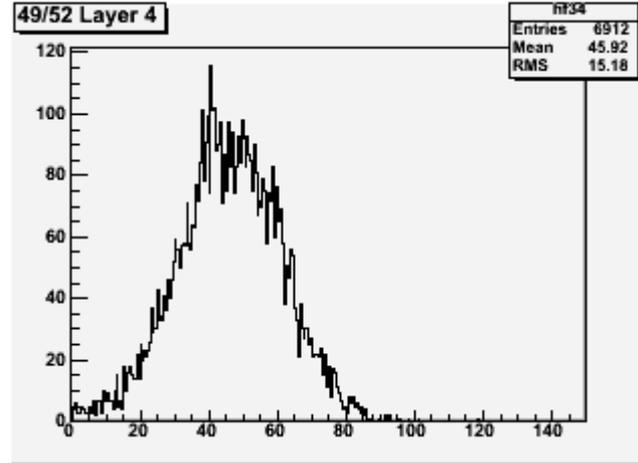

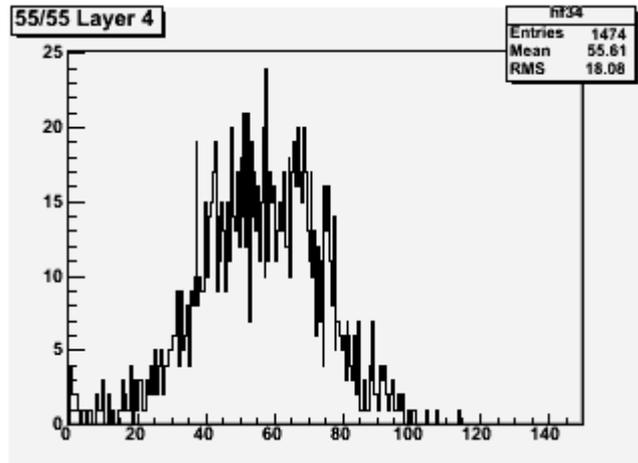

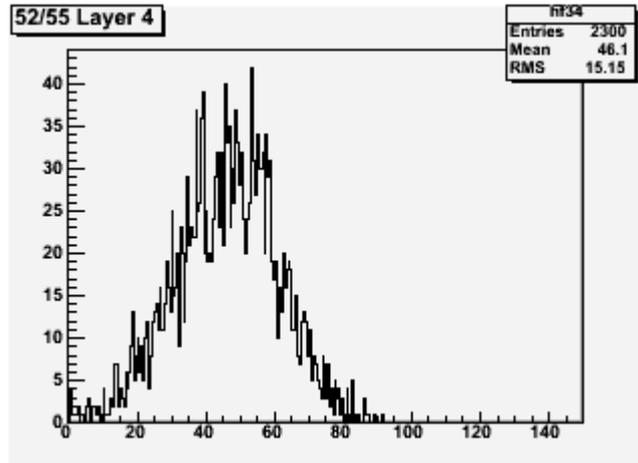

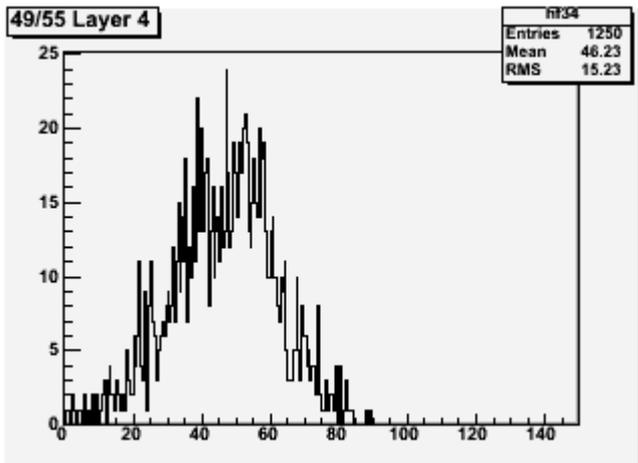

“in neighbour” - beam spot is on
neighbour tile (see a “halo” signal)

- compare the individual tile-spectra for each tile from the tower and compare them
- “in center” - check the saturated spectra
- “in neighbour” - check the MIP calibration probable shift (?)

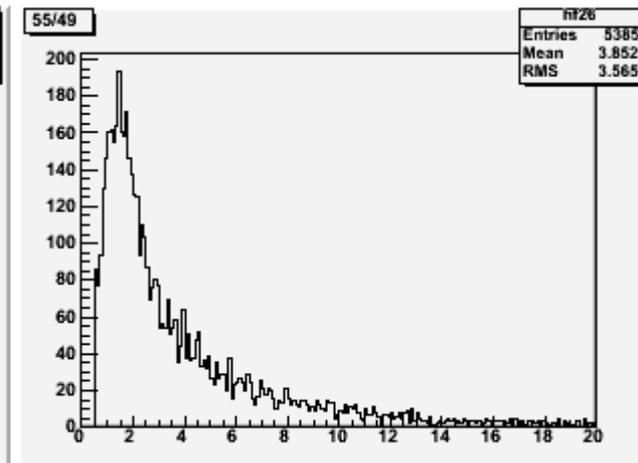

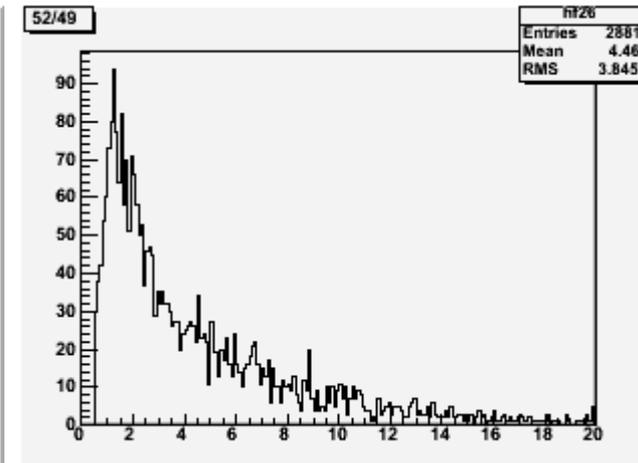

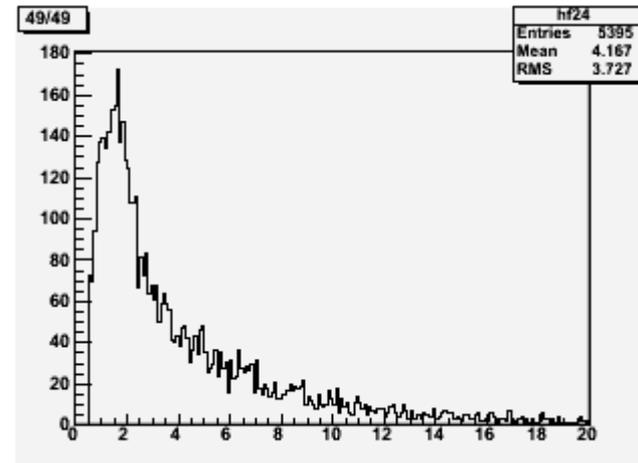

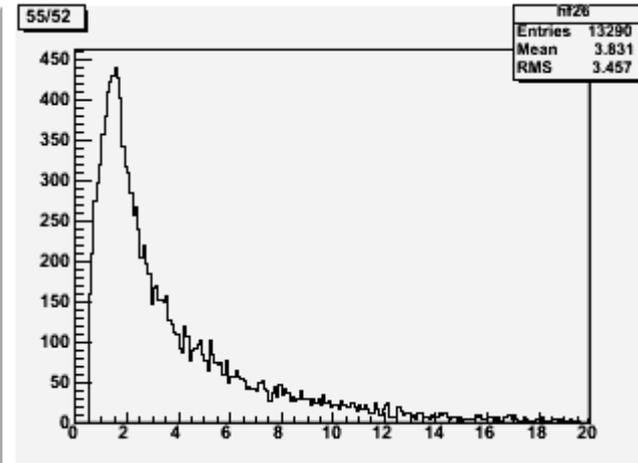

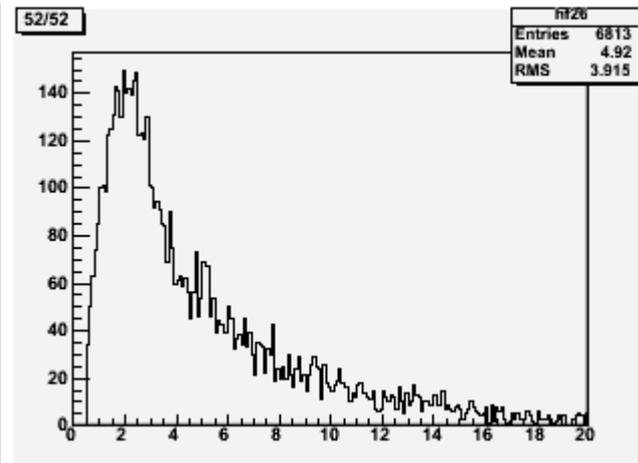

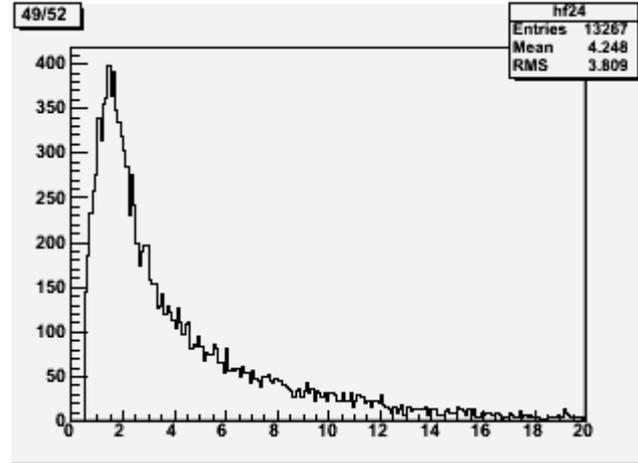

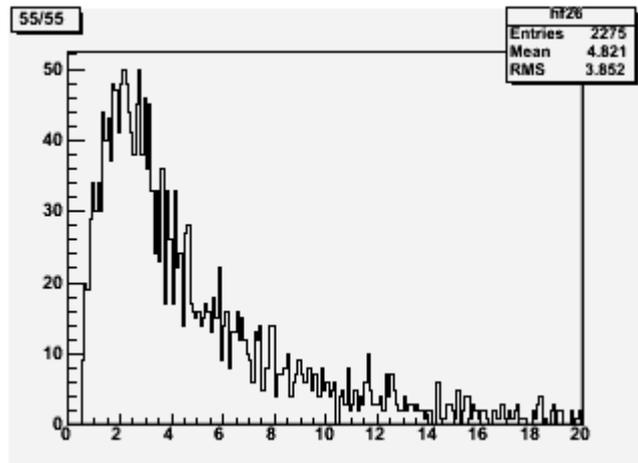

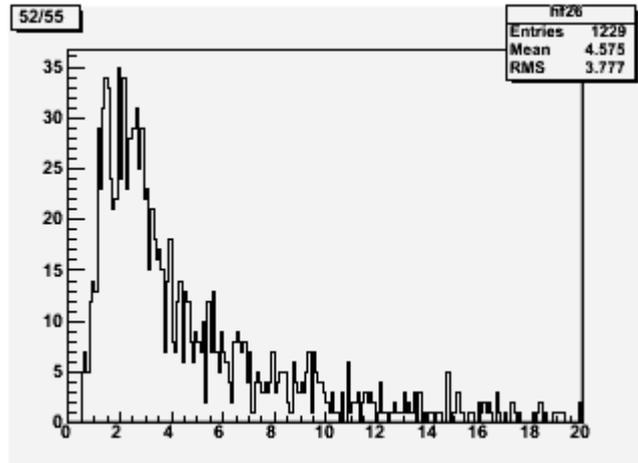

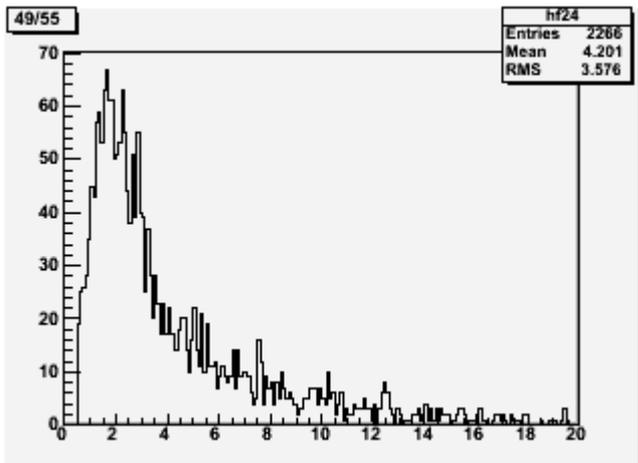

Analysis of electromagnetic showers in CALICE AHCAL prototype 10Gev, MC, "in center"

Analysis of electromagnetic showers in CALICE AHCAL prototype 10Gev e+, data, "in center"

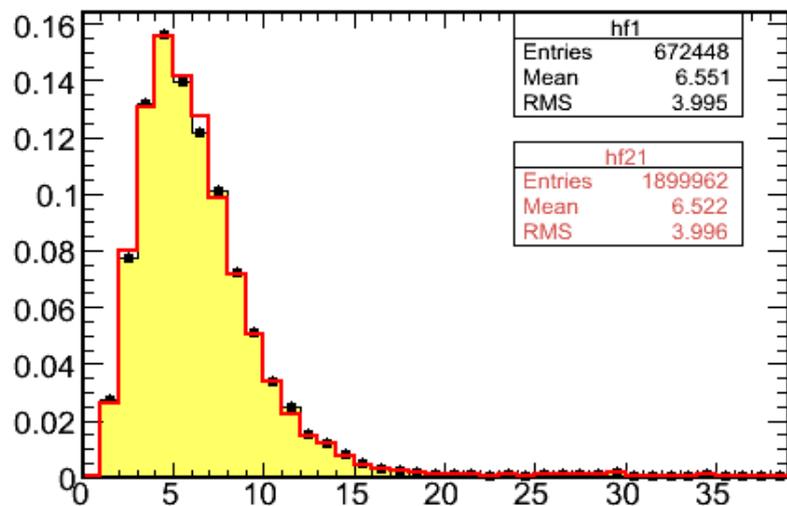

Analysis of electromagnetic showers in CALICE AHCAL prototype 10Gev e+, data, "in neighbour"

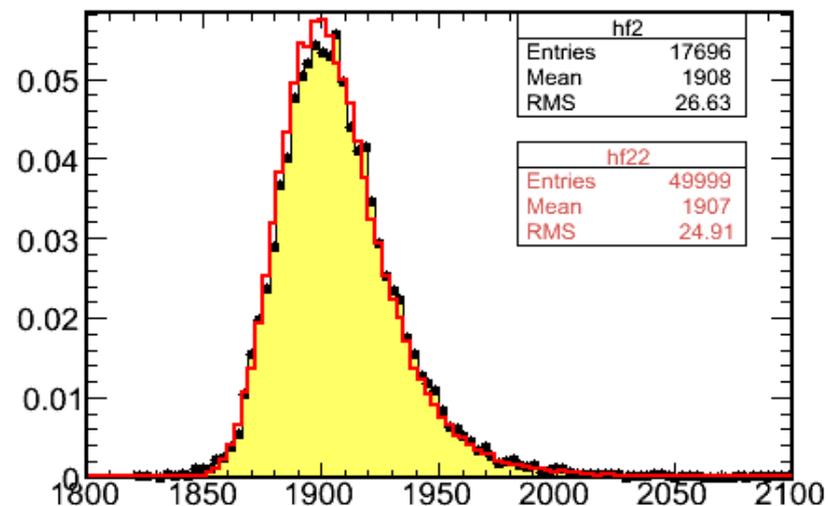

Analysis of electromagnetic showers in CALICE AHCAL prototype

Try to correct MIP values: layer 4 : mip(52/52) *= 1.3, mip(55/55) *=1.3

Summary & Outlook

- new Mokka model with real layer thicknesses is introduced. Monte Carlo study of this model shows quite good agreement for geometrical e/m shower positions in AHCAL as well as longitudinal profile.
- some tiles show more energies as predicted with comparison data and MC. Simple correction of MIP values doesn't work enough (other effects?)
- further studies are needed to find the reason of energy differences for the tile spectra
