

# External Scientific Advisory Board

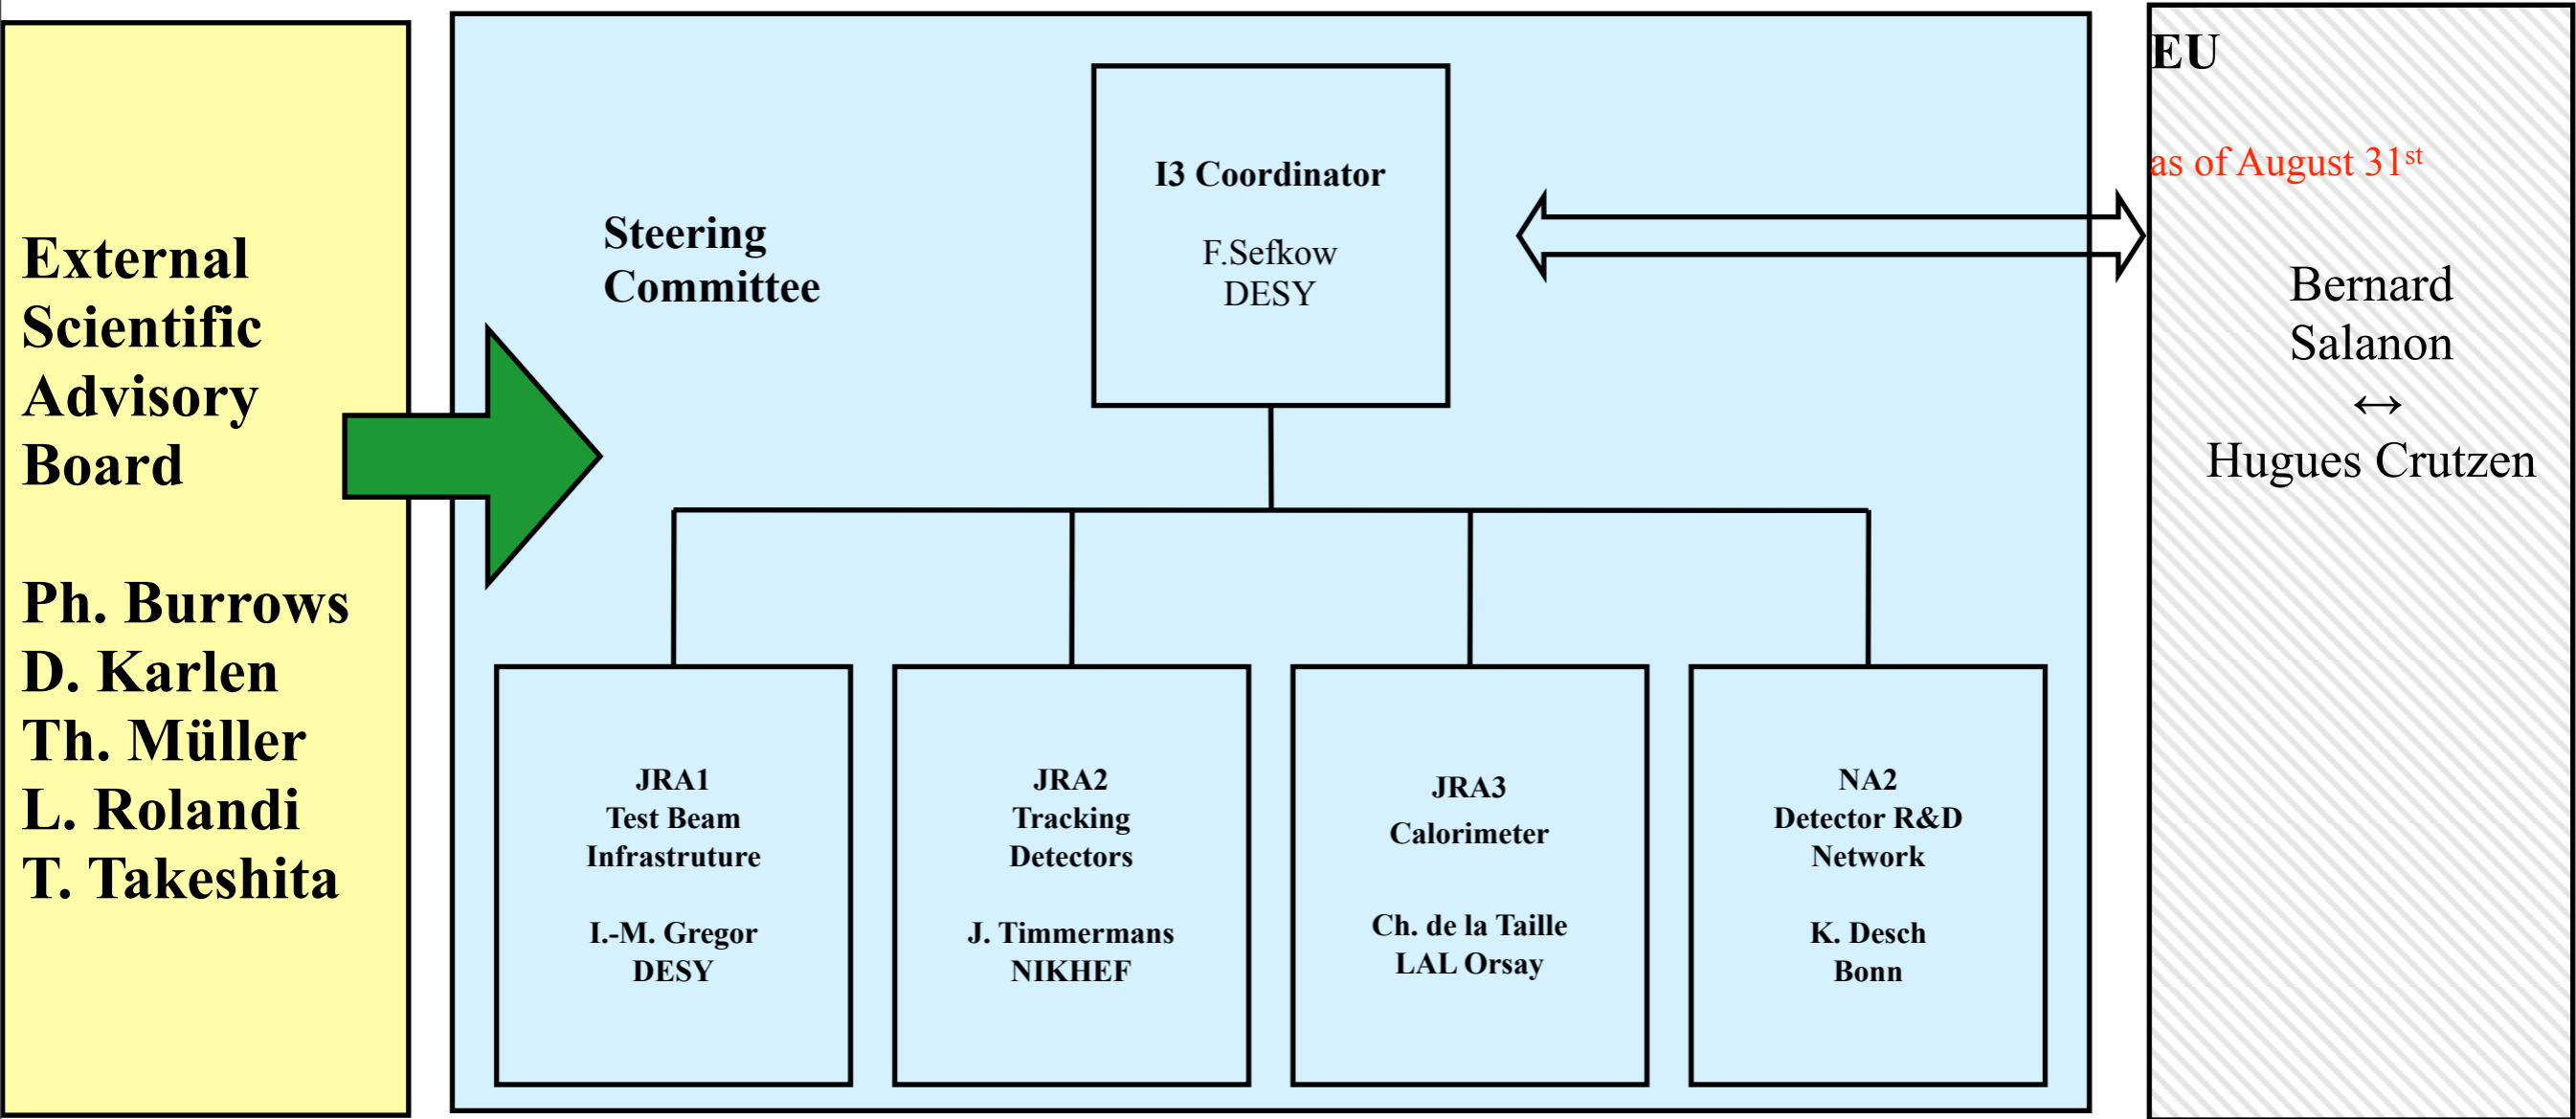

is supposed to make comments in annual  
EUDET meeting at the end

- Gigi Rolandi missing, by stepping out the chair
- we will discuss with Gigi and other members
- The statements here are not official, but my personal comments

# EUDET Management

## ESAB comments

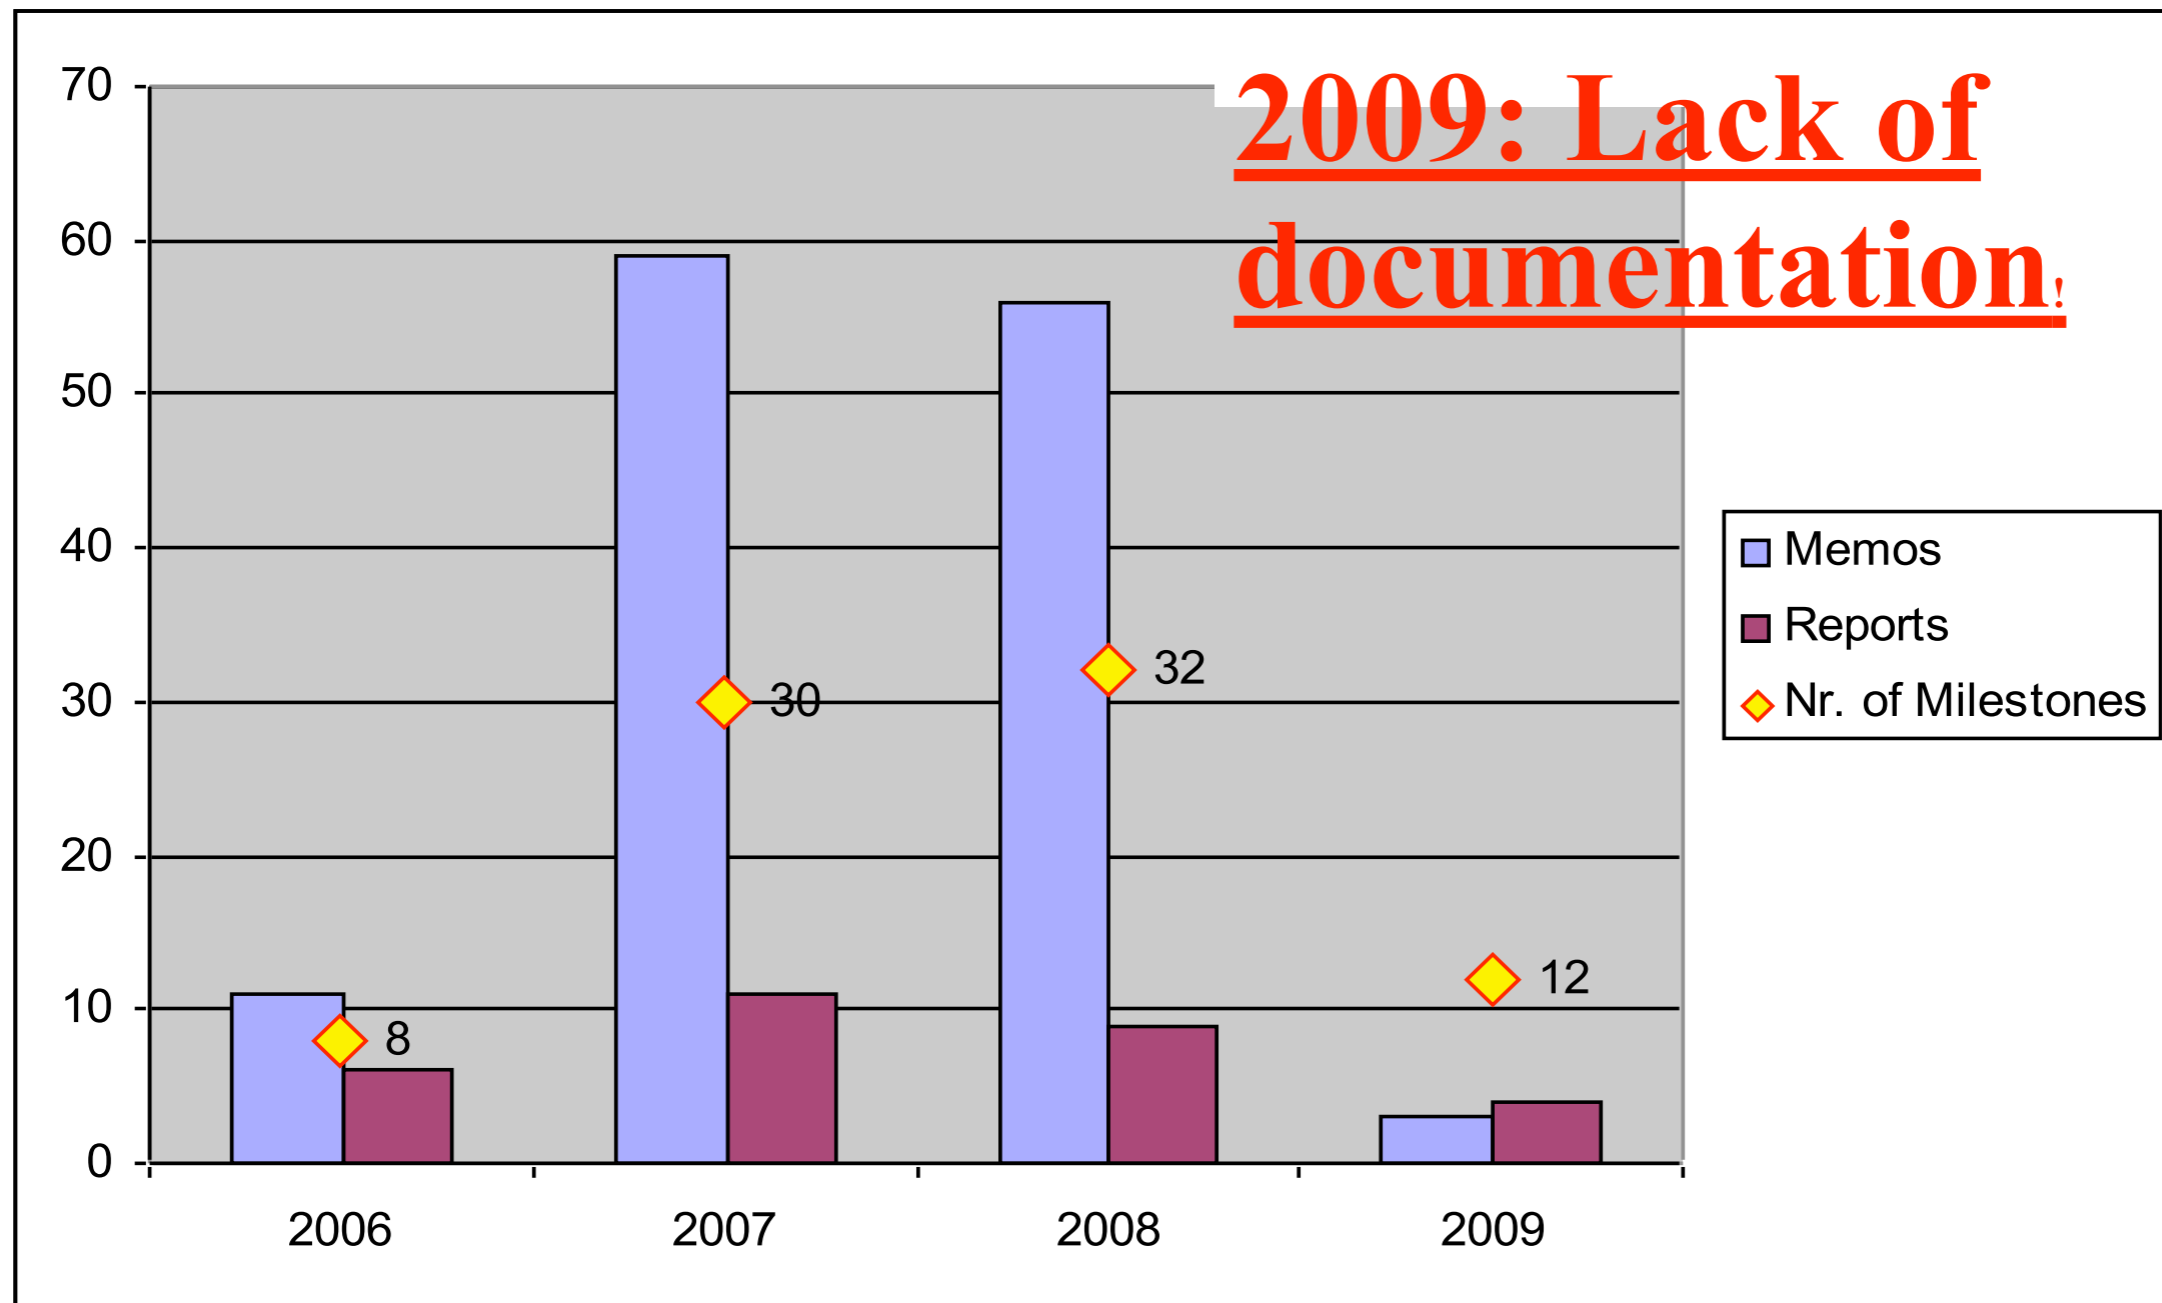

- I see
  - significant progresses in JRA1, 2, & 3
  - all infrastructures are delivered
- Thanks for your efforts
- In general, EUDET is emerging the expected shape
  - such as TB telescope, TPC, CAL-structures
- encourage further effort

- for example,
- in JRA1
  - many outside users
- in JRA3
  - forward calorimeter looks good shape
  - ECAL/HCAL modules are constructed and tested mechanically well
  - micro-electronics ASIC development is in good shape
  - DAQ integration is in progress

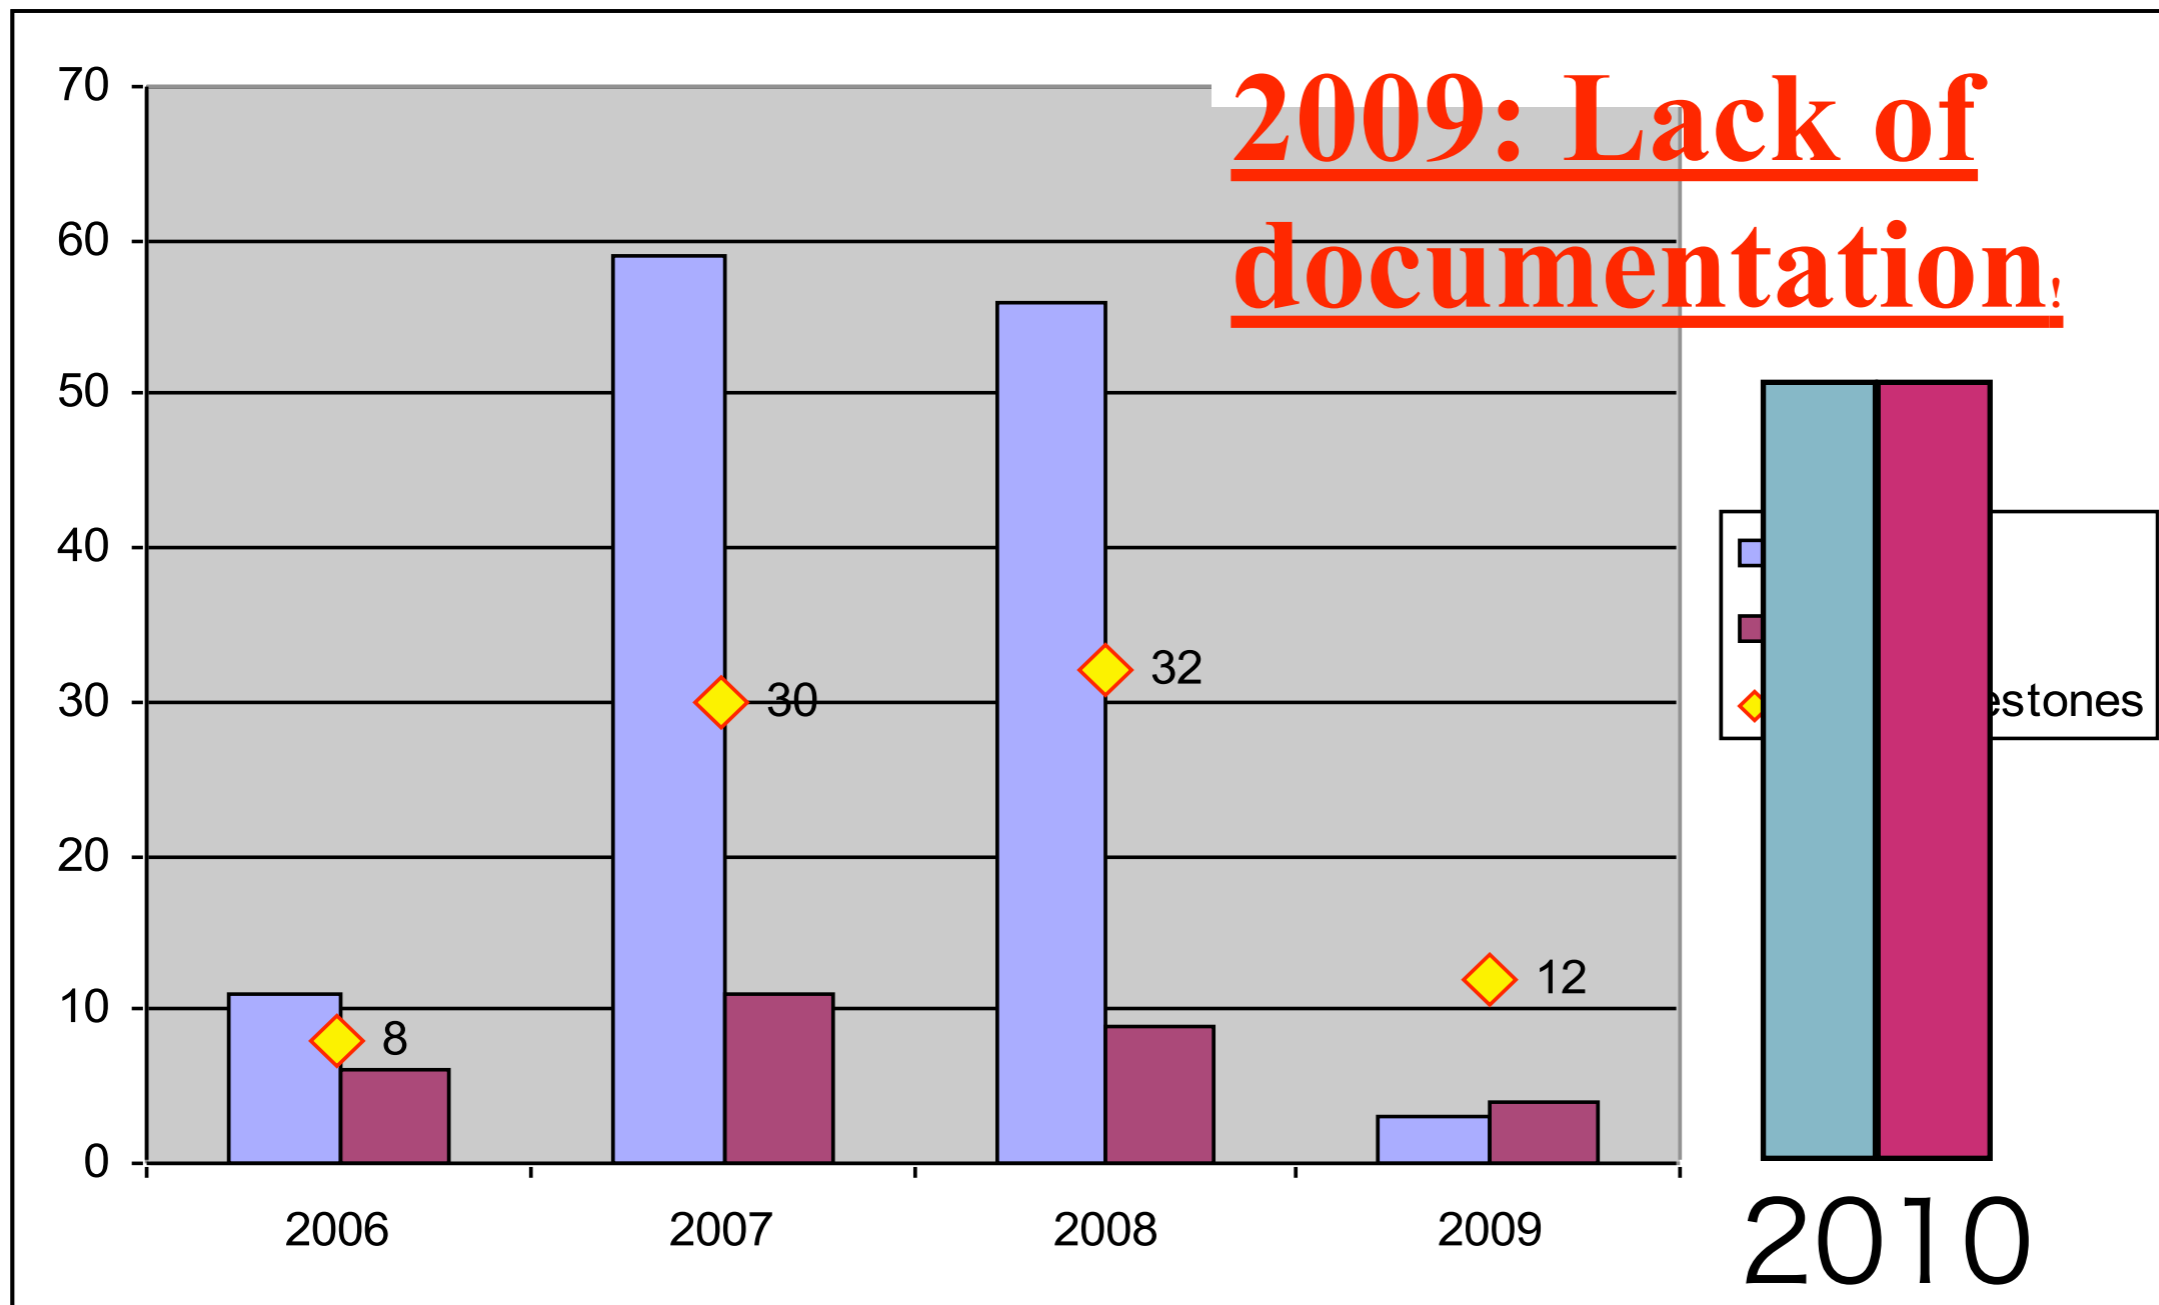

# However

- I worry about the **last year** of EUDET 2010

# However

- I worry about the **last year** of EUDET 2010

- at last
- 2010 will be the last year of EUDET
- finish up the EUDET and document them
- then EUDET will be a successful project
- once more encourage current EUDET activities and documentation
- this will help ensure success for next project (FP7)
