## FPCCD Vertex Detector

## FPCCD Vertex Detector

- FPCCD(Fine Pixel CCD)
- Pixel size: $5 \mu \mathrm{~m} \times 5 \mu \mathrm{~m} \times 15 \mu \mathrm{~m}$
- full well depletion
- \#Pixels: $\sim 10^{10}$ pixels
- some pixels hit in the same layer
$\rightarrow$ pair background can be rejected by pattern recognition.

## Simulation study

Simulation study for FPCCD Vertex Detector
To do

- develop dedicated software for FPCCD Vertex Detector
- FPCCD digitizer
- develop algorithm to reduce background hits based on cluster shape
- evaluate tracking and vertexing performance
$\rightarrow$ Current status of this study will be presented.
[- FPCCD digitizer
- Pair-background rejection
- Effective pixel occupancy

## Simulation condition

Simulation condition

- Detector model: ILD00_fwp01
- Signal
- Single electron events (statistics: 5000 events)
- emitted all direction $(\theta, \varphi)$ by particle-gun
- Momentum: $50 \mathrm{MeV}, 100 \mathrm{MeV}, 500 \mathrm{MeV}, 1 \mathrm{GeV}$
- Background
- Есм: 500 GeV
- Beam parameter

|  | BX/train | MC statistics (BX) |
| :---: | :---: | :---: |
| RDR-Nominal | 2625 | 168 |
| RDR-LowP | 1312 | 63 |
| SB2009wTF | 1312 | 59 |

## FPCCD digitizer

## FPCCD digitizer

- special digitizer for FPCCD vertex detector
- role: make pixel hits from "SimTrackerHits"

Note

- No threshold to create pixel hits
- Hit is created when particle shaves pixel.
$\rightarrow$ We try to estimate pixel occupancy with FPCCD digitizer.

## Pixel occupancy

The pixel occupancy was estimated.

- 2nd or 3rd layer : $<0.2 \%$
- 1st layer $\quad: 2 \sim 6 \% \leftarrow$ so large
$\rightarrow$ Background should be rejected.

|  | 1a | 1b | 2a | 2b | 3a | 3b |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| RDR-Nominal | $4.07 \%$ | $2.33 \%$ | $0.13 \%$ | $0.10 \%$ | $0.02 \%$ | $0.02 \%$ |
| RDR-LowP | $5.79 \%$ | $3.05 \%$ | $0.19 \%$ | $0.13 \%$ | $0.03 \%$ | $0.03 \%$ |
| SB2009wTF | $5.39 \%$ | $3.02 \%$ | $0.16 \%$ | $0.15 \%$ | $0.03 \%$ | $0.03 \%$ |

## Strategy of background rejection

$Z$ dependence of \#Pixels in $Z$ direction

- \#Pixels of signal depends on Z.

\#Pixels in $\varphi$ direction
- Signal hits a few pixels.

## Z dependence of \#Pixels in Z direction

\#Pixels in Z direction was checked.

- \#Pixels of signal depends on Z .
- Typical \#Pixels: 3Z/R
$\rightarrow 3 Z / R<\#$ Pixels $<3 Z / R+2$ was selected.

## \#Pixels in $\varphi$ direction

\#Pixels in $\varphi$ direction was checked.

- Signal event hits a few pixels.
$\rightarrow \#$ Pixel $\leq 2$ was selected.

## Reduction summary

Efficiency of signal

- Efficiency of 50 MeV electron is low. $\rightarrow$ should be improved

|  | 1a | 1b |
| :---: | :---: | :---: |
| 50 MeV | $46.99 \%$ | $46.61 \%$ |
| 100 MeV | $89.82 \%$ | $81.63 \%$ |
| 500 MeV | $96.22 \%$ | $97.45 \%$ |
| 1 GeV | $97.98 \%$ | $99.42 \%$ |

## Effective occupancy

- The occupancy was reduced sufficiently.

|  | $\mathbf{1 a}$ | $\mathbf{1 b}$ |
| :---: | :---: | :---: |
| RDR-Nominal | $4.07 \% \rightarrow 0.13 \%$ | $2.33 \% \rightarrow 0.08 \%$ |
| RDR-LowP | $5.79 \% \rightarrow 0.17 \%$ | $3.05 \% \rightarrow 0.11 \%$ |
| SB2009wTF | $5.39 \% \rightarrow 0.17 \%$ | $3.02 \% \rightarrow 0.11 \%$ |

## Summary

Simulation study of FPCCD vertex detector is ongoing.

- FPCCD vertex detector can reject pair background thanks to very small pixels.
- Software to make FPCCD hits are developed.
- Backgrounds were rejected by pattern recognition.
- Parameter: RDR-Nominal,LowP and SB2009wTF
- Efficiency of 50 MeV single electron event should be improved.

| Occupancy | $\mathbf{1 a}$ | $\mathbf{1}$ 1b |
| :---: | :---: | :---: |
| RDR-Nominal | $4.07 \% \rightarrow 0.13 \%$ | $2.33 \% \rightarrow 0.08 \%$ |
| RDR-LowP | $5.79 \% \rightarrow 0.17 \%$ | $3.05 \% \rightarrow 0.11 \%$ |
| SB2009wTF | $5.39 \% \rightarrow 0.17 \%$ | $3.02 \% \rightarrow 0.11 \%$ |
