Modeling Fast Timing Quartz Cherenkov Detectors

Outline

- ⦿ Why do we need fast timing?
- ⦿ Why Cherenkov?
- ⦿ Simulation Setup
- ⦿ Photo-Detectors
- ⦿ Timing Process
- ⦿ Timing Resolutions
- ⦿ Further Studies

Why Fast Timing?

- Many application
- Vertex Measurements of Proton Collisions to 2mm

<http://www.hep.phy.cam.ac.uk/theory/research/cep.html>

Why Cherenkov Light?

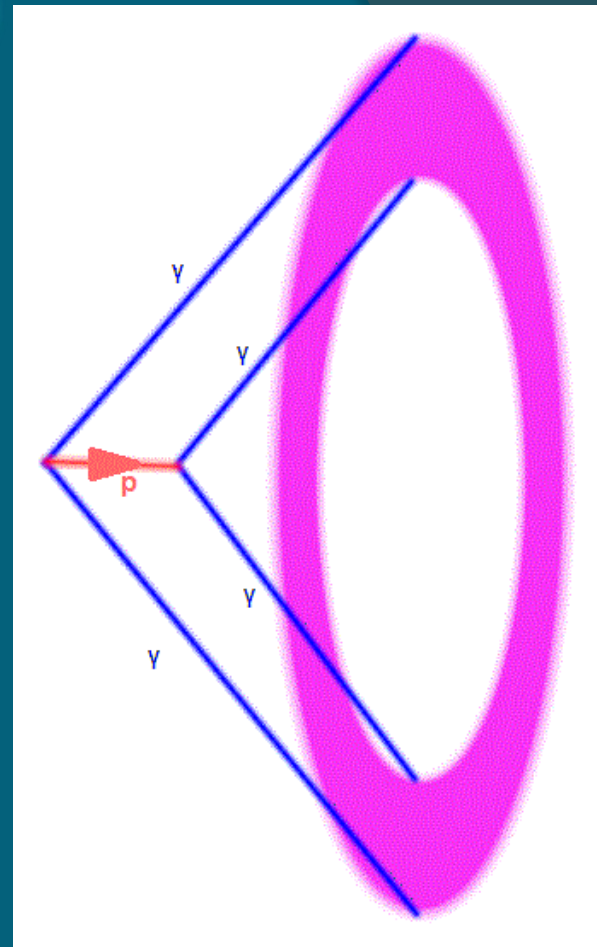

- More Prompt than Scintillation

- Cherenkov Angle:

$$\cos \theta = \frac{1}{n\beta}$$

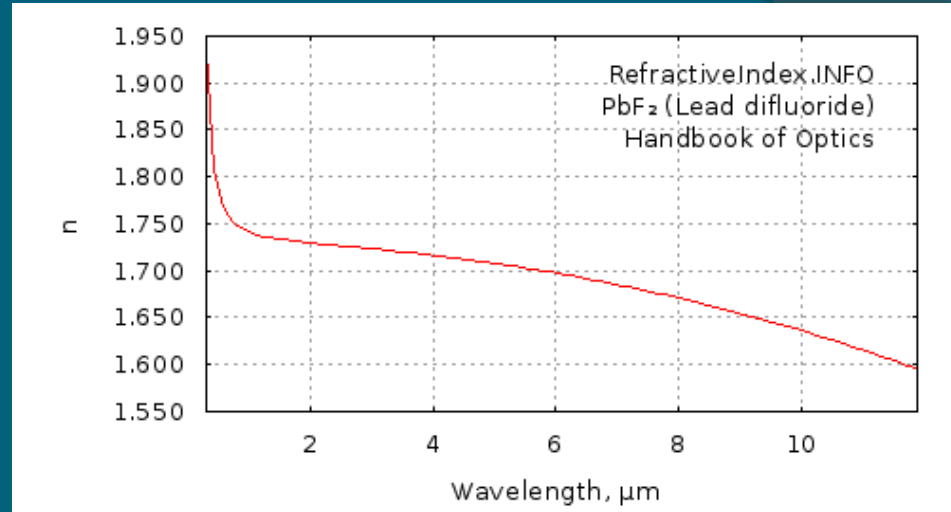

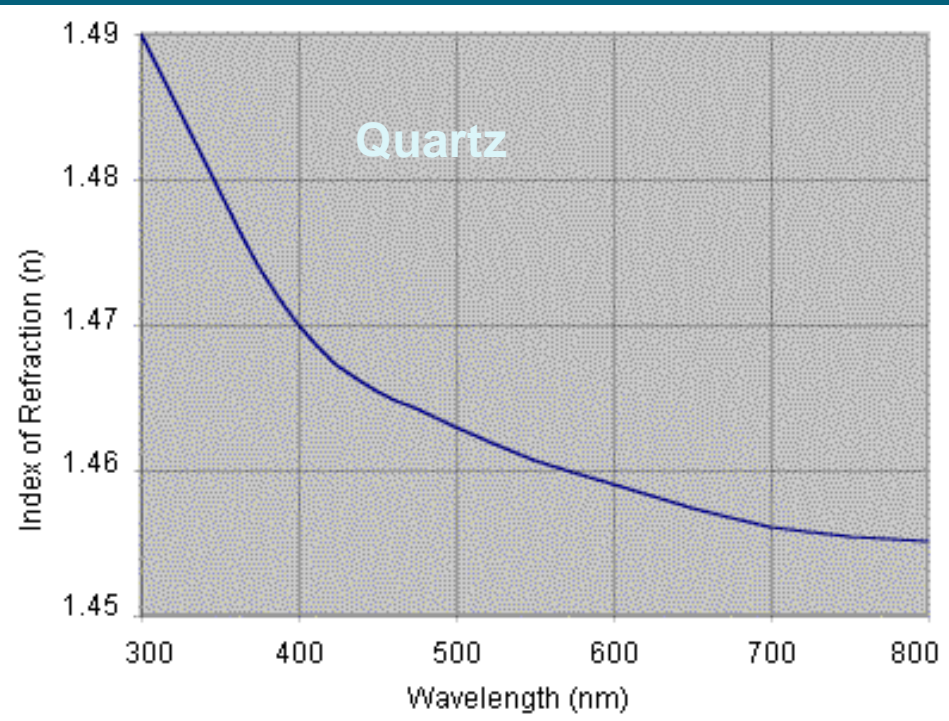

<http://apod.nasa.gov/apod/ap010221.html>

http://www.ps.uci.edu/~superk/superk_detector.html

Quartz and PbF₂ Refractive Index

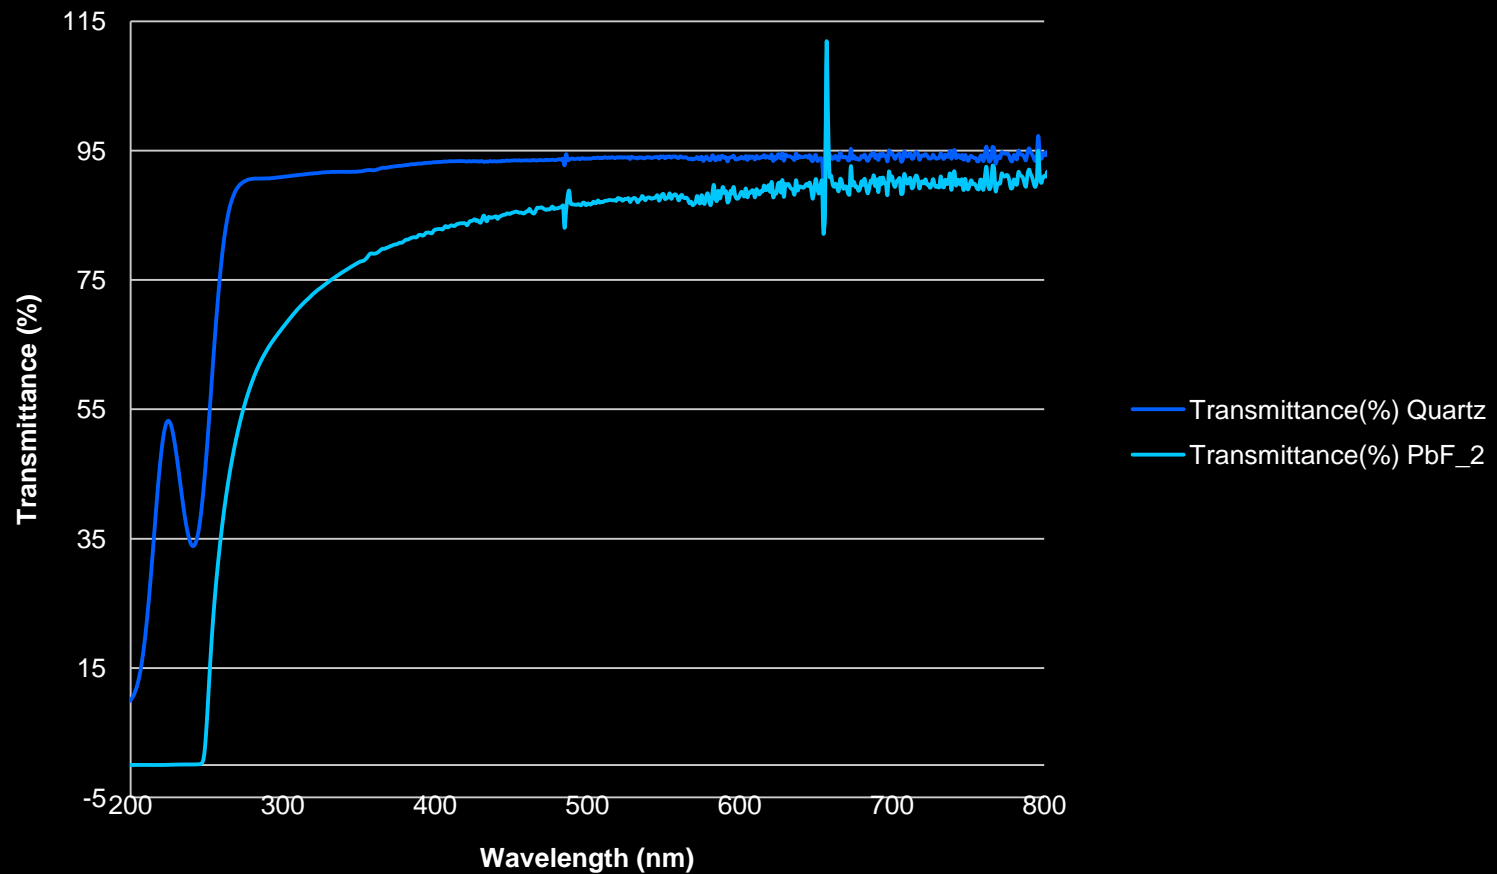

<http://refractiveindex.info/?group=CRYSTALS&material=PbF2>

<http://www.instant-analysis.com/Principles/spectra.htm>

Quartz and PbF2

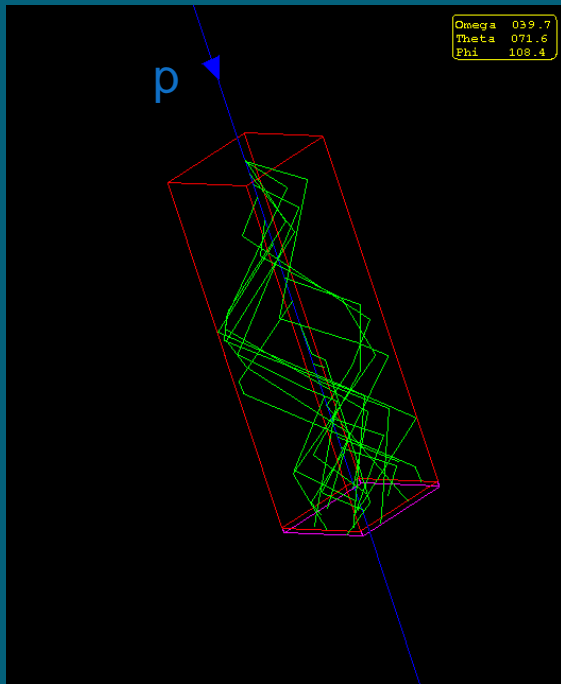

Transmittance vs. Wavelength for Quartz and PbF2

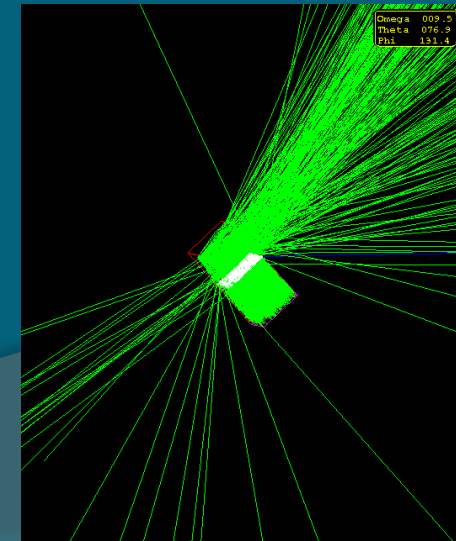

Simulation Tools

- Geant4: A C++ based Monte Carlo simulation program.
- ROOT: A C++ based analysis program
- Interactions in Geant4
- Analysis and photo-detector in ROOT

SiPM Setup

QUARTIC Setup

Photodetectors

- Silicon Photo-Multiplier (SiPM)
- Micro-Channel Plate (MCP)

SiPM

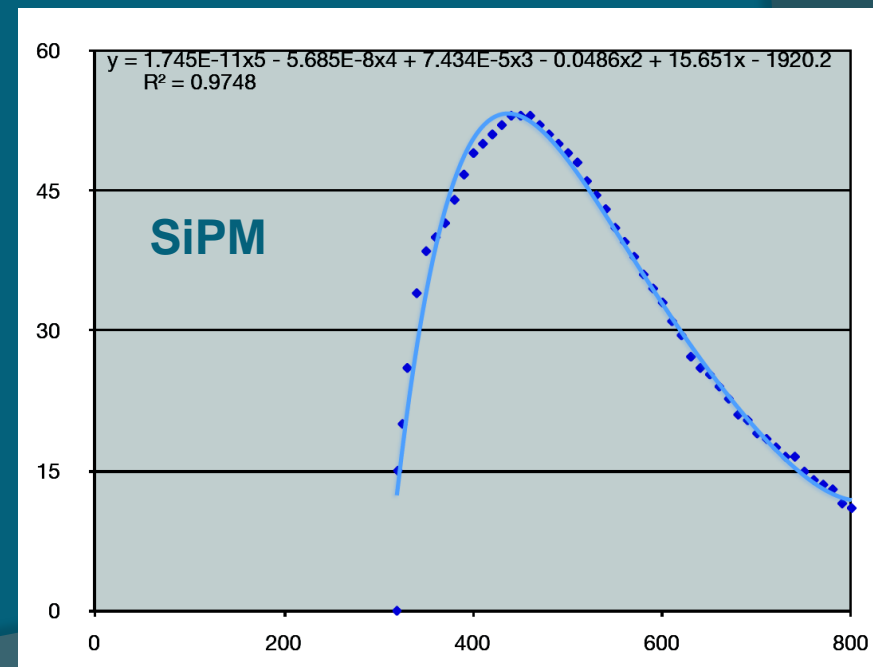

Window shown is
3mm x 3mm

http://jp.hamamatsu.com/products/sensor-ssd/4010/4025/S10362-33-050C/index_en.html

Detector Efficiency

- Probability that an incident photon will produce a photoelectron for SiPM and MCP below

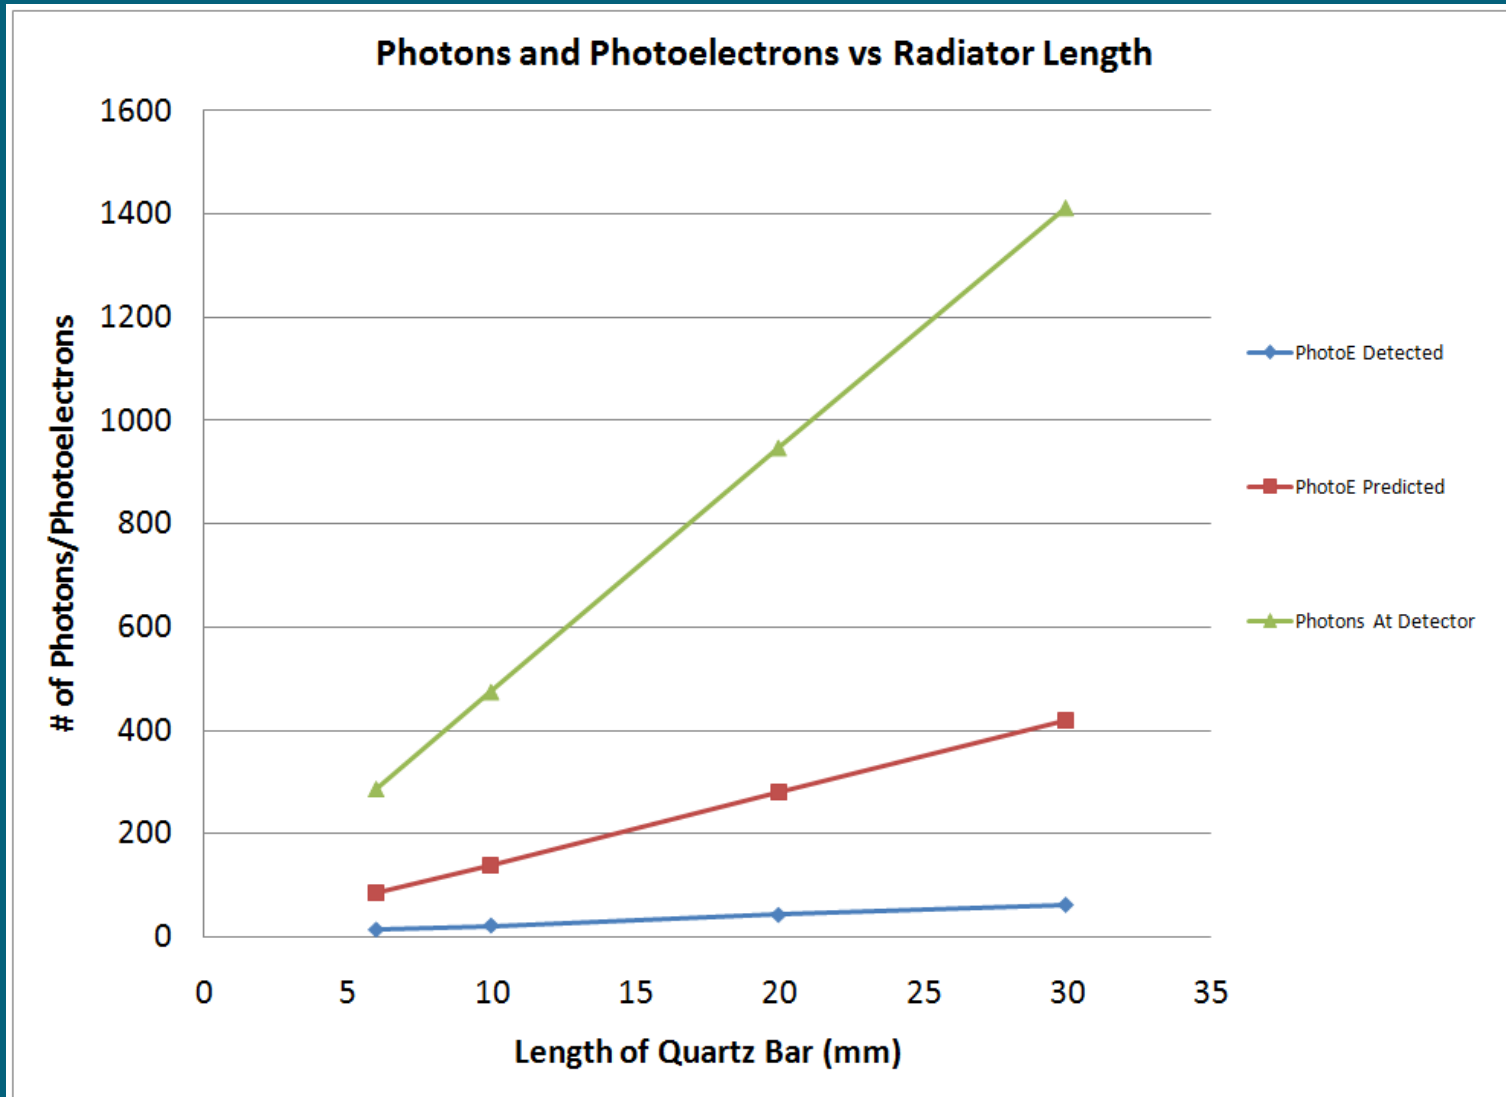

Photons At Detector vs. λ

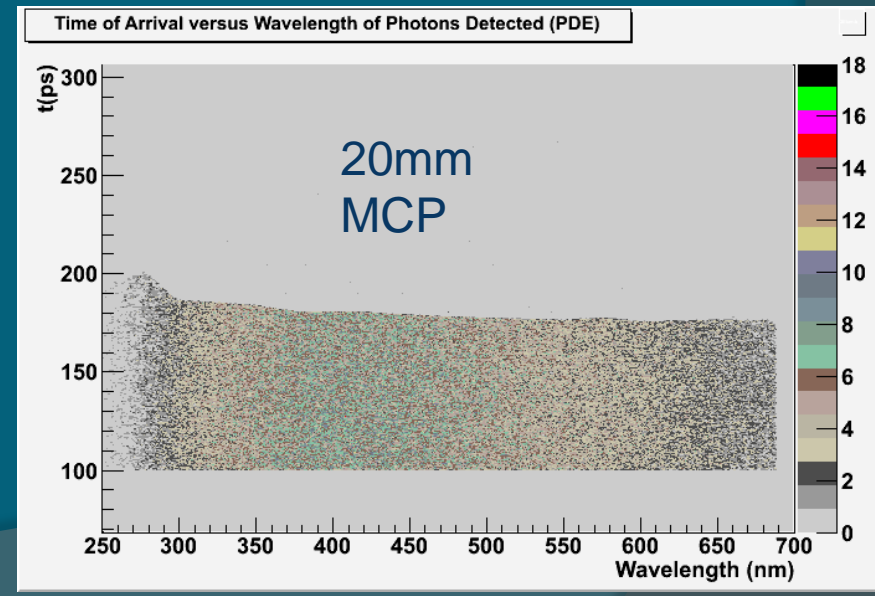

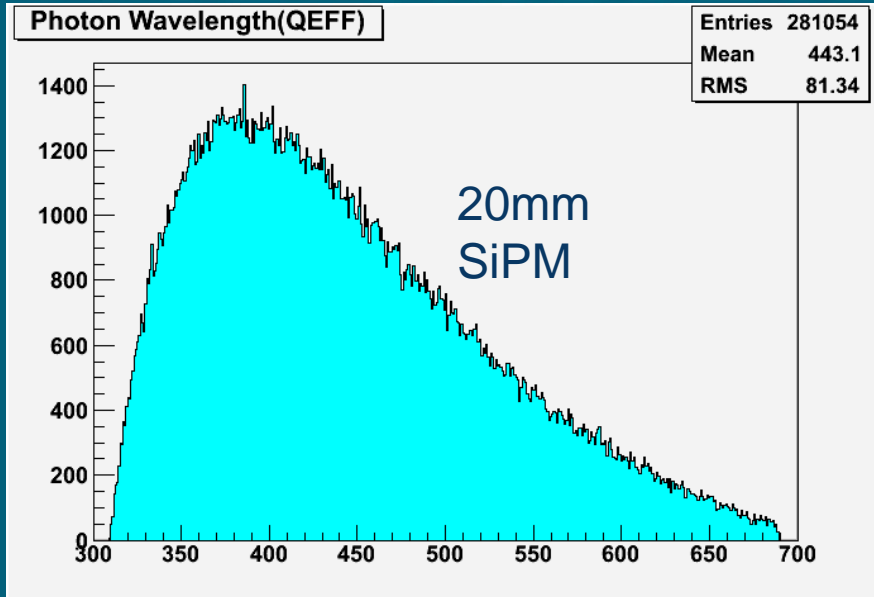

- Photons reaching detector
- Geant4 modeling process well

No. of Photons At Detector

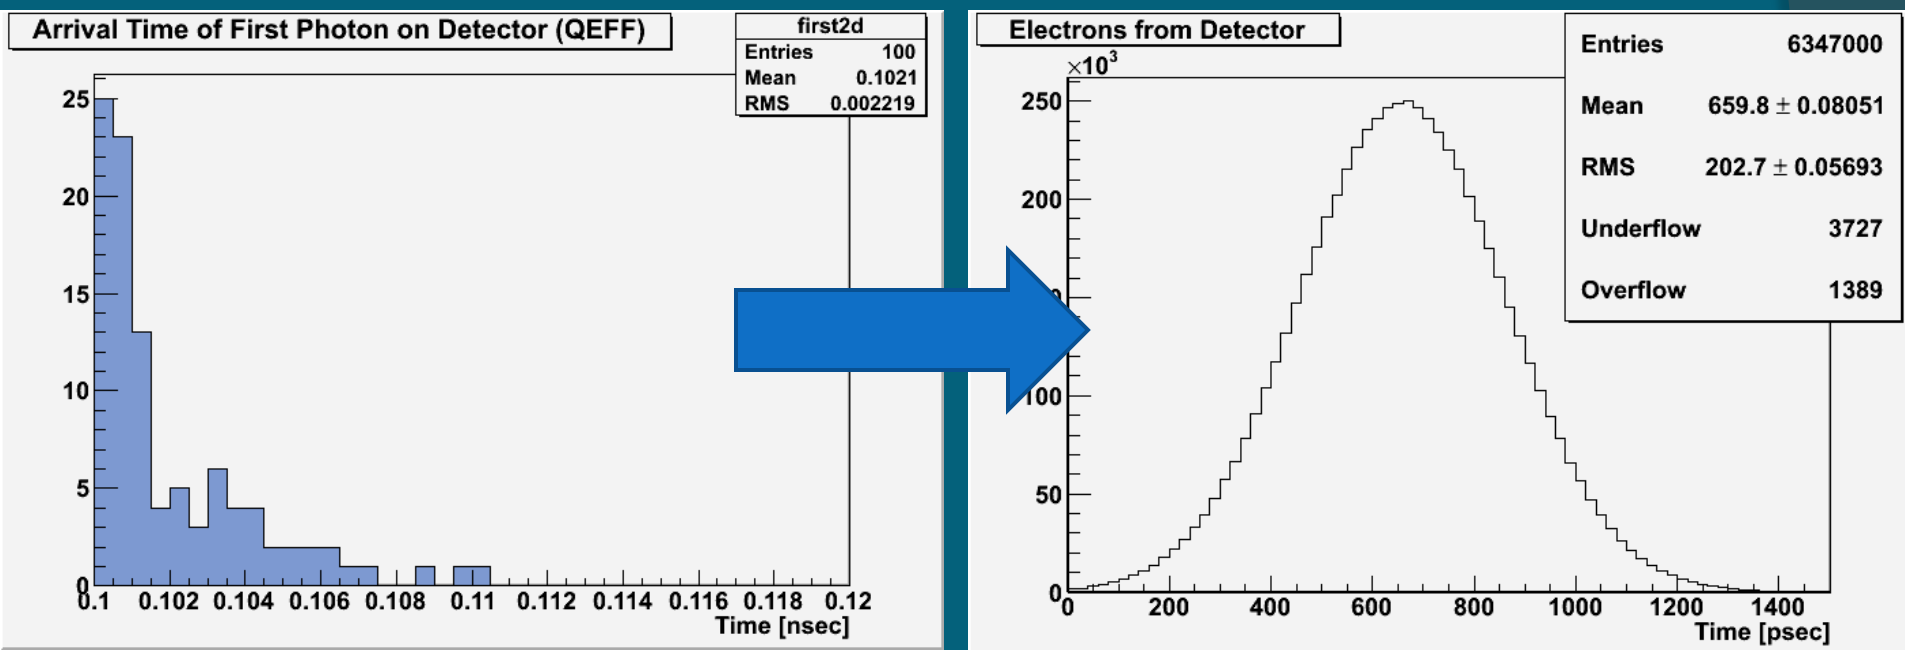

Photons At Detector & Detected

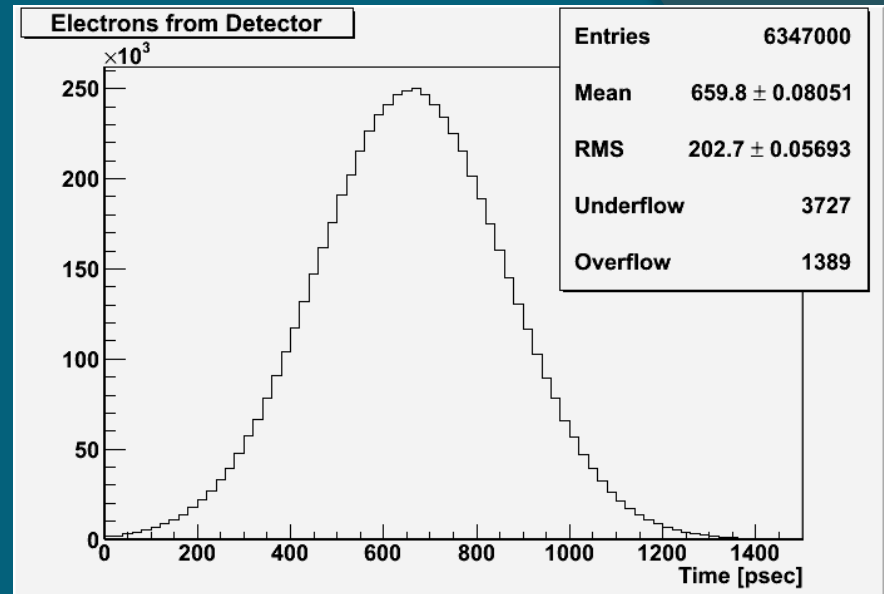

Jitter and Time Transit Spread (TTS)

- Jitter: Effect of electronics displaces whole signal
- TTS: Effect of electron travel “smears” pulse

CFD Timing

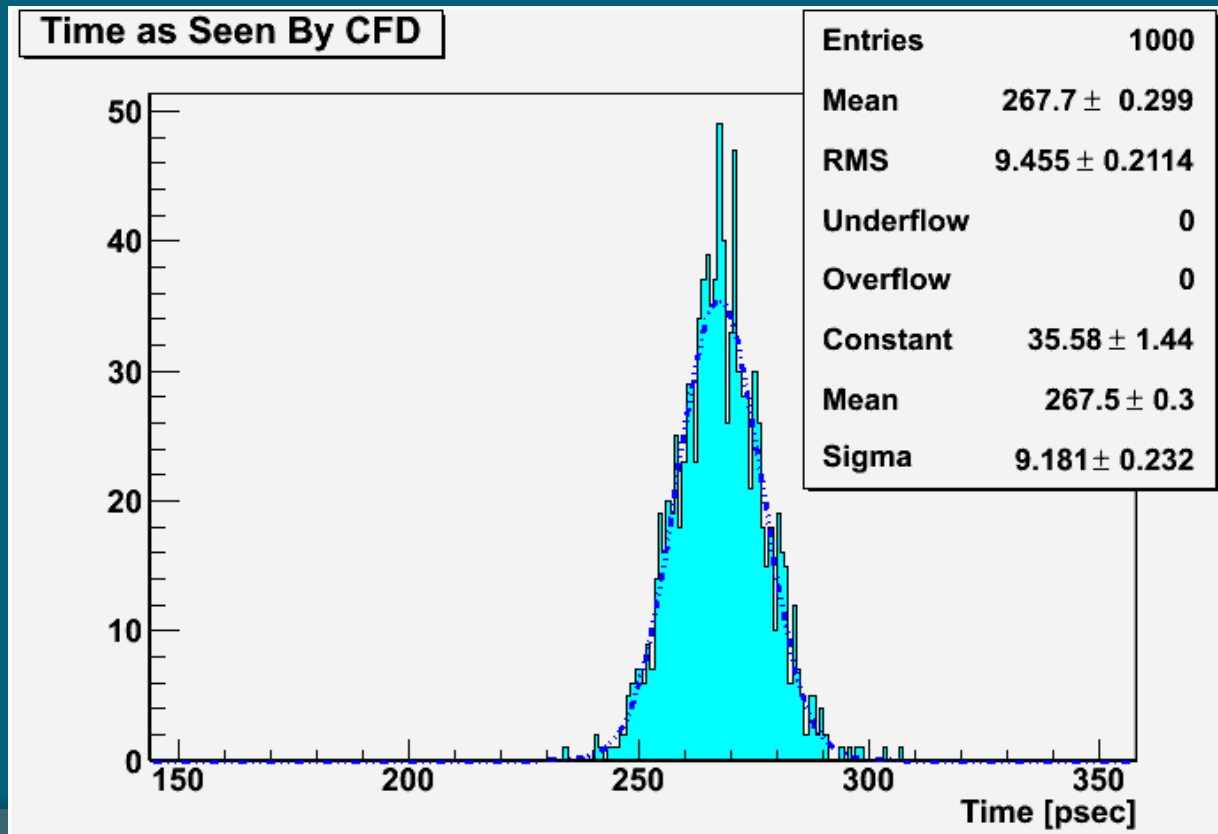

⦿ Jittered, Spread Pulse

http://en.wikipedia.org/wiki/File:Constant_fraction_1.svg

Timing Resolution

- Fit CFD times of 1000 protons with Gaussian, find st. deviation

Further Studies

- Look at Timing Resolution with Signal Correction
- Look at Lead Fluoride as a Possible Radiator.
- Simulate Blue & Red Filters
- Do more QUARTIC setups
- Find the Factor of 2
- Figure Out Source of Photoelectron Loss
