ILD EB meeting

Jul.8,2011, 22:00 JST

1. Software baseline

   Strategy and plan concerning the ILD software baseline were discussed based on the plan presented by Mark Thomson at the analysis meeting just after the LAL ILD Workshop. Mark's plan was agreed.

   Akiya Miyamoto showed a list of jobs for software tools which contains the responsible persons and due dates.

2. ILD solenoid

   Henri Videau suggested removing correction coils of the ILD solenoid because correction coils make the engineering design of the solenoid very difficult and increase the cost. There was no objection, and Ron Settles will prepare a note which describes effect of non-uniform B-field to TPC tracking.

3. Speaker coordinator

   JSB proposed to assign a speaker coordinator who keeps track of speakers on ILD and suggests possible candidate speakers in coming workshops. After some discussion, this proposal was declined.

   Concerning the ILD speaker at LCWS11, EB members are encouraged to send e-mails nominating candidates.
