

Status of the FPCCD software

Physics and Software meeting

2011/08/05

D.Kamai (Tohoku University)

Current states

■ Background simulation

- New server for background simulation is available.
- Samples are being re-digitized by using latest FPCCD digitizer.
- 1train background simulation will be performed.

■ New silicon tracking

- FPCCD Clustering : being modified to pack the cluster shapes information into CellID1.
- Tracking processor : trying to perform the track finding by using information of the incident direction.
