

Status of the FPCCD software

Physics and Software meeting

2011/12/09

D.Kamai (Tohoku University)

Current states

- New silicon tracking software are available.
 - FPCCD software were adjusted to these.
 - Single mu event is ok.
 - For more complex event, new class is needed to make the link between MC and reconstructed tracks.
 - Estimate the tracking efficiency.
 - Check the performance with background.

- If background is too heavy to good tracking, development of FPCCD tracking is needed.
