

2014—Year of Success (馬到成功)

ma dao cheng gong

- last year, our group did significant contribution to ILC TDR and Snowmass; lots of analyses need be finalized / improved and documented / published.
- this year, there will be another important task, ILD optimization; lots of performance check need be provided by our group, so get ourselves prepared.
- to make our analysis more efficient and advanced / working more closely, we are thinking to create some VO (2~3 people / task group, multi-VO / person): ie. Recoil Mass / Total Width / JCP / BR(ff) / BR(rare) / Top / SelfCoupling / NewPhys / GFit / / LeptonSel / PhotonSel / JetClustering / FlavorTag / Simulation / StatisticalAlgorithm / Systematics...
- regular status / progress report, occasionally add more sessions to share technics / interesting physics / tools.

2014—Year of Hard Work (馬不停蹄)
