

- Proposal to agree on common reconstruction software (\neq common reconstruction!) and common analysis for testbeam results shown in LCTPC presentations
- Analysis workshop at KEK \rightarrow
 - Agreement on cuts and quality plots
 - SVN reco data repository including run info and steering/config files
 - Software infrastructure available
- Full drift range scan data as agreed in collaboration
- Else...
 - We compare apples and oranges
 - Nobody outside a small circle can really follow/understand/reproduce/check/reassess results
 - Wrong message/impressions to outside community ...and endless discussions inside collaboration
- Didn't work in the past, hopefully does in future
