

Minutes of WP-meeting 202

Attendance:

DESY: Ties Behnke, Ralf Diener, Leif Jönsson, Claus Kleinwort, Felix Müller
Fuzebox: Alain Bellerive, Jochen Kaminski, Ron Settles

PCMAG/LP setup, test beam:

Ralf: PCMAG/TRACI/test beam area:

- The floor has to be redone because it is not flat enough and contains bubbles.
- All other projects are ongoing.

General news

FTE requirements for TPC construction. The discussion will be continued during a dedicated meeting next week. Ron will prepare a summary of the numbers discussed so far.

During the ILD meeting in Oshu there is a special session on the status of all subdetectors. The ILD management suggested two presentations: one, which revisits the parameters of each sub detector. Here we should discuss which parameters look like we can fulfill and which are unrealistic. All caveats and limits should be mentioned. Also things like calibration etc., where we have no idea yet, shall be mentioned.

In the second talk, we should show the way of how to make a technology decision. For this a certain set of parameters has to be defined. All technologies have to deliver the results and will be compared. We have to discuss what is missing to define this set of parameters.

Since Jochen decided to go to Oshu, he will give one of the talks. It would be nice if a Japanese could give the other one. Takeshi was suggested, but has not been available to confirm yet.

AOB:

The next workpackage meeting will take place on August 28th.
