

FCAL Clustering WG.
Meeting Minutes.
January 05, 2015.

Oron gave a talk: Update on Beam Test Data Reconstruction in Telescope.

- It was found that track angles varies in wider range in horizontal direction then in vertical. This might explain the difference in x and y residuals distributions;
- Further improvements in telescope sensors alignment and reconstruction algorithm is required.

Titi suggested to check x and y residuals distributions in slices of track angles.

Next meeting was scheduled to take place on January 19, at 5pm (CET).
