# 2015 at MPI Munich

## Ron Settles

- Now working on various issues; later on addendum 2015 to the LCTPC MoA.
  - Including ILD Optimization: a task of growing importance.
    - Not only our TPC optimization, e.g. thin tracker, two-track separation for all track momentum,  $dE/dx$ , large displaced vertices, momentum resolution at low PT, a continuous central tracker in a high multiplicity environment, time-stamping, etc.
- But also in future **better** formulating the advantages of the **better** ILD tracking philosophy: TPC + Si detectors.
- We have, or someone has, to find someone to take up the work on the SET, an important part of the tracking concept.
