

# $H \rightarrow \gamma\gamma$ Status

C. Calancha  
Regular Friday Meeting

February 13, 2015

### Added 2 DST-MERGED Missing Files (@ 500 GeV)

- ae\_evxy.eW.pL
  - ae\_exxy.eW.pL
  - DST for these processes were available.
    - But they haven't being merged.
  - I have merged then, uploaded to the GRID.
    - Registered replicas at DESY and KEK.
  - Also copied to disk in kekcc.
- 
- If you are running over DST-MERGED at 500 GeV you need to add these processes in your scripts.

H  $\rightarrow$   $\gamma\gamma$

- Introduced many changes in my code since LCWS13.
- Current preselection seems worst.
- Debugging the origin of those differences.
  - Comparing current version of my code with version Nov. 2013. (Work in progress).
