

Explaining the ILC

Barbara Warmbein

DESY PR, LC communications, CERN press office

Critical time to explain the ILC

- R&D for ILC is making progress, but slowly
- Europe, US wait for a sign from Japan
- Japan waits for a sign from Europe
- Support for particle physics is very high
(thank you LHC!)
- “quote Rika”
- Other projects are taking shape

The landscape of future colliders

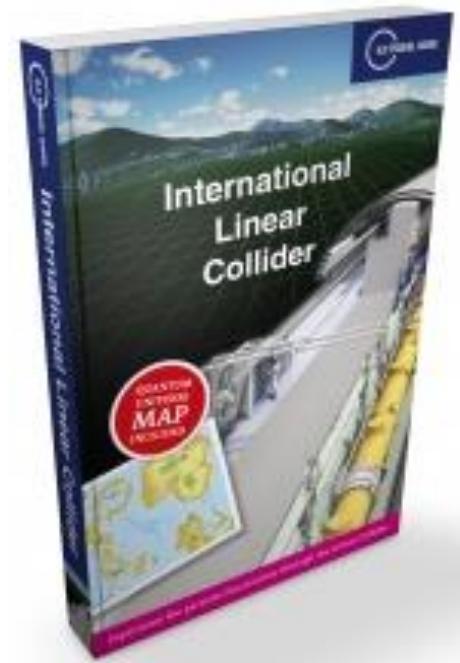

Support in the Kitakami region

And if you're still confused about all the terms and names and places, check out the [Big ILC Kitakami Iwate Tohoku Glossary](#).

...but there's also doubt

Survey amongst over 1000 school children in Oshu city revealed many had heard of the ILC, some were interested, but some were also afraid:

“Will they destroy our countryside?”

“Is it dangerous?” “Is it noisy?”

“Will it make everything more expensive?”

“Will Fukushima be repeated?”

“We will not understand the researchers”

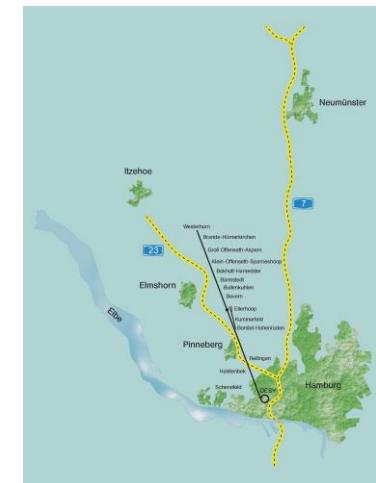

“What about the radiation?”

...back in TESLA times...

Before the BMBF pulled the plug in 2003, DESY was extremely active in reaching out to potential neighbours of the TESLA project. DESY went to the villages, collected and presented facts, held town hall meetings, created an exhibition etc.

This is exemplary!

Not everybody liked it though.

Bulmahn gibt grünes Licht für Großgeräte „Damit sichern wir die internationale Spitzenstellung der deutschen Grundlagenforschung“

Die Grundlagenforschung mit Großgeräten erhält in Deutschland einen neuen Schub. Bundesforschungsministerin Edelgard Bulmahn stellte am Mittwoch in Berlin ihre Pläne vor. „Das erste Konzept für Großgeräte in der Grundlagenforschung seit über zehn Jahren gibt der deutschen Forschungslandschaft Perspektiven und Planungssicherheit für die Zukunft“, erklärte die Ministerin. Die naturwissenschaftliche Grundlagenforschung habe in Deutschland eine große Tradition. Ihre Erfolge seien untrennbar mit dem Einsatz von Großgeräten an nationalen und internationalen Forschungszentren verbunden. „Mit dem jetzigen Konzept startet die hervorragend aufgestellte deutsche Grundlagenforschung in ein neues erfolgreiches Jahrzehnt“, so Bulmahn.

Bundesforschungsministerin Bulmahn stützt sich bei ihrem Konzept auf die Empfehlungen aus der Wissenschaft. Erstmals hat der Wissenschaftsrat im Auftrag des Bundesforschungsministeriums eine Empfehlungsliste für ein solches Vorhaben ausgearbeitet. Von neun vorgeschlagenen Projekten schlug der Rat zwei zur direkten Umsetzung vor. Bulmahn will neben diesen zwei weitere vom Wissenschaftsrat sehr gut bewertete aber mit Auflagen empfohlene Projekte fördern.

Rückenwind für TESLA!

DESY begrüßt die BMBF-Entscheidung zu Großgeräten

Nachdem die beiden TESLA-Projekte im November vergangenen Jahres vom Wissenschaftsrat mit hervorragenden Noten beurteilt worden sind, hat die Bundesforschungsministerin, Edelgard Bulmahn, heute ihre Entscheidung zu den geplanten Großgeräten bekannt gegeben:

1. DESY soll den TESLA-Röntgenlaser erhalten, der als europäisches Projekt realisiert werden soll, wobei Deutschland wegen der Standortvorteile die Hälfte der Kosten übernimmt.

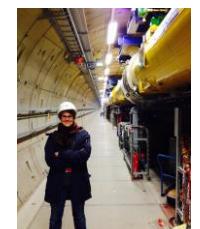

2. Es wird heute kein deutscher Standort für den TESLA-Linearbeschleuniger vorgeschlagen. Die Entscheidung hängt damit zusammen, dass dieses Projekt in einer Weltkollaboration betrieben werden soll. Bevor eine Standortentscheidung zum TESLA-Linearcollider getroffen wird, sollen die Entwicklungen auf internationaler Ebene abgewartet werden. Die international eingebetteten Forschungsarbeiten zu dem Projekt sollen von DESY fortgesetzt werden, um eine deutsche Beteiligung an einem späteren globalen Projekt zu ermöglichen.

"DESY begrüßt die schnelle und richtungsweisende Stellungnahme des Bundes zu den Forschungsgroßgeräten und sieht darin eine enorme Chance für TESLA. Sie stärkt die Helmholtz-Gemeinschaft in ihrer Rolle als Betreiberin großer Forschungsanlagen", so die erste Reaktion des Vorsitzenden des DESY-Direktoriums, Professor Dr. Albrecht Wagner. "Mit der Möglichkeit, den TESLA-Röntgenlaser als europäisches Projekt bei DESY zu verwirklichen, ergeben sich für Deutschland und Europa herausragende Forschungsperspektiven. Für den längerfristig angelegten Linearcollider für die Teilchenphysik sollen die internationalen Forschungsarbeiten bei DESY fortgesetzt werden."

How do you come in?

We might as well do something while we wait for a sign from Japan:

- issue the Tokyo Statement (tick)
- Subscribe to, read and contribute to *LC NewsLine*
- Get active on social media – facebook, twitter (even snapchat if you want)
- Show support there
- Record more #mylinearcollider videos

Summer students reunite at test beam

[Share](#) | [Facebook](#) [Twitter](#) [LinkedIn](#)

Barbara Warmbein | 26 November 2014

Many physicists have extremely fond memories of their time as a summer student at labs like DESY in Germany or CERN in Switzerland. Some even describe it as pivotal because they decided to choose particle physics as their area of specialisation after being immersed in a real research environment, surrounded by people with the same goals, having their own research project to work on and making lots of new friends.

One project at DESY that receives summer students every year is the [analogue hadronic calorimeter prototype](#). And it seems to be one of those that inspire students to stay in particle physics: at a recent test beam of the calorimeter at CERN, four consecutive generations of former DESY summer students (and their supervisor) were around to take shifts and data. From left to right: Lloyd Teh (University Shinshu, summer student 2014), Shion Chen (University of Tokyo, summer student 2013), Eldwan Bräuer (DESY, summer student 2012), Mathias Reinecke (DESY, AHCAL electronics and summer student supervisor), and Oskar Harribach (DESY, summer student 2011).

by Akira Yamamoto

A delegation from Kesen-Numa City, from Japan, led by the Mayor Mr. Shigeno Sugawara, visited CERN and the area around it from 18 to 20 May. The group consisted of 16 representatives from the city's Council, the Commercial and Industry Association, the Board of Education, the Reconstruction and Policy Planning Division and many other official bodies. They visited CERN to gather information on how a working laboratory functions and what it needs.

International Linear Collider Published by Barbara Wambein ILC · 22 April · Edited · 4,246 people reached

The Tokyo Statement, issued by the Linear Collider Collaboration and the more than 300 participants from around the world at the Asian Linear Collider Workshop 2015 today, confirms their conviction of the scientific justification for a prompt realisation of the International Linear Collider.
