

1 Acknowledgements

This material is based upon work supported by the National Science Foundation under Grant No. 0935316 and was supported by JSPS KAKENHI Grant Number 23000002. The authors acknowledge the support of the Natural Sciences and the Engineering Research Council (NSERC) of Canada, the Foundation for Fundamental Research on Matter (FOM), which is part of the Netherlands Organisation for Scientific Research (NWO), and the Swedish Research Council (registration number xxxxxxx).

The research leading to these results has received funding from the European Commission under the 6th Framework Programme “Structuring the European Research Area”, contract number RII3-026126, and under the FP7 Research Infrastructures project AIDA, grant agreement no. 262025. This project has received funding from the European Union’s Horizon 2020 Research and Innovation programme under Grant Agreement no. 654168.

The authors would like to thank CEA/Irfu and KEK for their support of the cosmic ray trigger. Special thanks go to Y. Makida, M. Kawai, K. Kasami and O. Araoka of the KEK IPNS cryogenic group, and A. Yamamoto of the KEK cryogenic centre for their support in the configuration and installation of the superconducting PC-MAG solenoid.

The measurements leading to these results have been performed at the Test Beam Facility at DESY Hamburg (Germany), a member of the Helmholtz Association and the authors would like to thank the technical team at the DESY accelerator and test beam facility for the smooth operation of the test beam and the support during the test beam campaign.

** colors:*

Black: Based on input from LCTPC members.

Dark Red: Predefined text from funding agency etc. - Should not be changed.

Dark Green: For future texts: Predefined text from AIDA2020. Should not be changed.

Dark Blue: Extra sentence from the DESY publication draft. Not demanded by DESY testbeam.

3 Information and Discussion

- Swedish Research Council registration number is still missing.
- Is the order alright? Should we reorder?
- Should general acknowledgements include only testbeam hardware related parts, meaning our common setup, or more?
- For the laser calibration setup and the beam trigger I got input related to the funding agencies of the institutes (NSERC, FOM/NWO). For the cosmic trigger input came listing the institutes (CEA, KEK). Should we decide on one common way to list it or leave it like this?
- Should we mention what has been funded / what we thank for, as in the example of PCMAG and cosmic trigger?
- PCMAG acknowledgements include names, others do not. Should we decide on a general style or leave it like this?
