

Some Updates on $h \rightarrow \mu^+ \mu^-$ Benchmark

Shin-ichi Kawada (DESY)

2018/November/21

ILD Analysis/Software Meeting

General Status

- DBD-paper: no activities, working on v01 -> v02 
- Vietnam proceedings (deadline: Nov./30): uploaded at practice page 
- LCWS2018 proceedings: just prepared template 
- benchmark analysis: full analysis chain is now working
- IDR note: in parallel with benchmark analysis 
- IDR itself: nothing 
- HC2018 talk: preparing for 10+5 min. talk, rehearsal on Nov./22, 13:00

Disclaimer

- I just got some numbers in IDR analysis, not yet think deeply. Your comments are welcome.

Benchmark Analysis: Overview

- IDR samples with v02-00-01, further analysis with v02-00-02
- Use IsolatedLeptonTagging and VertexInfo
- Cut-based analysis (preselection)
- TMVA (BDTG)
- Toy MC

- Everything now technically works with ROOT6.08
 - many thanks to Daniel/Junping/Remi/Yan/Jakob
 - github work: finished uploading, no documentation yet

Benchmark Analysis

- Start to use VertexInfo functionality written by Daniel
 - code is available on github
 - estimate primary vertex position using 2 tracks and fitting
- IsolatedLeptonTagging -> VertexInfo
 - $E_{\text{CAL}}/p < 0.5$, $p > 10 \text{ GeV}$, $|d0\text{sig}| < 10^{10}$, $|z0\text{sig}| < 10^{10}$, $E_{\text{yoke}} > 0.5 \text{ GeV}$, MVA cut > 0.7
 - 2 muon tracks are subjected to VertexInfo
 - with or without beam spot constraint

Without/With Constraint $(x, y, z) = (10e-3, 10e-6, 0.3)$ [mm]

vtxPos_z {(type==12||type==14||type==16)&& n_muminus==1&& n_muplus==1}

15, Gaussian fit
width = 0.196 mm

vtxPos_z {(type==12||type==14||type==16)&& n_muminus==1&& n_muplus==1}

15, Gaussian fit
width = 0.196 mm

Without/With Constraint $(x, y, z) = (10\text{e-}3, 10\text{e-}6, 0.3)$ [mm]

vtxPos_x {(type==12||type==14||type==16)&& n_muminus==1&& n_muplus==1}

15, Gaussian fit
x-position, without

vtxPos_x {(type==12||type==14||type==16)&& n_muminus==1&& n_muplus==1}

15, Gaussian fit
x-position, with

Without/With Constraint $(x, y, z) = (10\text{e-}3, 10\text{e-}6, 0.3)$ [mm]

vtxPos_y {(type==12||type==14||type==16)&& n_muminus==1&& n_muplus==1}

15, Gaussian fit
y-position, without

vtxPos_y {(type==12||type==14||type==16)&& n_muminus==1&& n_muplus==1}

15, Gaussian fit
y-position, with

Cut-based Analysis

- Needed some work for ROOT5 -> ROOT6

Table 1: List of processes used in this analysis.

type	process name	
Higgs	ffh_mumu	
	higgs_ffh	
2f	2f_Z_bhabhag	
	2f_Z_leptonic	
4f	4f_singleW_leptonic	
	4f_singleW_semileptonic	
	4f_singleZee_leptonic	
	4f_singleZee_semileptonic	
	4f_singleZnunu_leptonic	
	4f_singleZnunu_semileptonic	
	4f_singleZsingleWMix_leptonic	
	4f_WW_leptonic	
	4f_WW_semileptonic	
	4f_ZZ_leptonic	
	4f_ZZ_semileptonic	
	4f_ZZWMix_leptonic	
	$\gamma\gamma \rightarrow 4f$	aa_4f

Table 5: List of selection cuts. Definition of variables are written in the text.

#	variable	cut
0	nothing	no cut
1	$\# \mu^\pm$	= 1
2	$\chi^2/Ndf(\mu^\pm)$	0.5 – 1.5
3	$ r_z $	< 0.5 mm
4	$ r_x $	< 0.01 mm
5	$ r_y $	< 0.5×10^{-6} mm
6	$\sigma(M_{\mu^+\mu^-})$	< 1 GeV
7	$M_{\mu^+\mu^-}$	100 – 130 GeV
8	$\cos \theta_{\mu^+\mu^-}$	< 0.55
9	N_{P_i}	= 0
10	E_{vis}	125 – 300 GeV
11	missing P_i	> 5 GeV
12	$ \cos \theta_{miss} $	< 0.99

Cut Table

Table 5: List of selection cuts. Definition of variables are written in the text.

#	variable	cut
0	nothing	no cut
1	$\# \mu^\pm$	= 1
2	$\chi^2/\text{Ndf}(\mu^\pm)$	0.5 – 1.5
3	$ r_z $	< 0.5 mm
4	$ r_x $	< 0.01 mm
5	$ r_y $	< 0.5×10^{-6} mm
6	$\sigma(M_{\mu^+\mu^-})$	< 1 GeV
7	$M_{\mu^+\mu^-}$	100 – 130 GeV
8	$\cos \theta_{\mu^+\mu^-}$	< 0.55
9	N_{P_t}	= 0
10	E_{vis}	125 – 300 GeV
11	missing P_t	> 5 GeV
12	$ \cos \theta_{\text{miss}} $	< 0.99

TMVA (BDTG) Analysis

- Needed some work for ROOT5 -> ROOT6
- Input variables are the same as of DBD (these plots are I5-option ones)

Toy MC

- Same technique applied as of DBD: using CBG and pol1
- full + benchmark: CBG fitting in bad resolution cases didn't work, and nnh500-R cases gave negative precision (too small events?)

- Obtained results for nnh500-L:

- l5: 38.2%
- s5: 42.8%
- DBD: 37.9%

Final Statistics

- BDTG cut point is different due to optimization
 - >0.45 for l5, > 0.65 for s5

Table 6: Cut table of nnh500-L-l5.

#	$v\bar{v}h$ $h \rightarrow \mu^+\mu^-$	$q\bar{q}h/\ell^+\ell^-h$ $h \rightarrow \mu^+\mu^-$	$f\bar{f}h$ other	2f	4f	$\gamma\gamma \rightarrow 4f$

B	31.45	0	0	0	1157.12 (1037.44)	38.96 (37.49)

Summary

- Everything is technically working.
- Writing an IDR note is in good shape.
- Thinking time: I5(38.2%) v.s. s5(42.8%). What is the origin of this difference?

- Need to work on HC2018
