

FCAL software and analysis meeting, December 12, 2018

Meeting Minutes

Sergej made some MC simulation of Molier radius using tantalum instead of tungsten. The results are similar. He mentioned that the tantalum is cheaper than tungsten. He asked Konrad if he knows somebody who worked with tantalum.

Aharon told that a master student from Kiev will coming in TelAviv for 3 months. He will be involve in Probe Station measurements using Eva's probe card and also will work on TB data analysis, photon reconstructions.

Wolfgang presented the paper status ...he and Sasha are working on the paper, also a few figures were change by Itamar and Sasha.

We agreed to ask the PS Committee to propose a speaker for the upcoming CLICdp Meeting. Yan, as co-convener for the calorimeter session suggested to have a presentation about the last results of the MR and the plans for the next TB.
