

RHN @ 250 GeV ILC

R. Yonamine

250 GeV ILC ($g_{BL}=0.5816$ & $m_Z=7.5$ TeV)

- Nobuchika-san kindly provided me an example plot of “xsec vs m_{NR} ”.

- Searching for “displaced vertex” is in consideration, but for now searching for “same-sign leptons” would be the first priority.

Current status :

- Confirmed technically PhysSim/Mokka works.
- Found no expected leptons.
- Checking Spring.cxx.
