October 21, 2020

Americas Workshop on Linear Colliders 2020

- Job prospects (graduate, post-doc, faculty, etc.) is our main concern
- Does the ILC present opportunities for small-scale experiments/measurements, or long-term, large-scale experiments where a very large collaboration focuses on one set of detectors?
- Funding concerns: what agencies are supporting this project?
- Timeline: When will instrumentation work start? Before construction on the facilities?
- Any expectation on the number of positions that would become available in the area of instrumentation?
