

FCAL software and analysis meeting, 14 October 2020,

Meeting Minutes

The meeting was dedicated to the TB2020 data analysis:

Veta presented a few slides about signal distribution from SRS read-out system using different cuts.

– The analysis were done for runs 182 and 190 that correspond to energy scan setup. The main cuts were on 3 parameters – t_0 , tau and neural network. The value for neural network was > 0.98 .

Remarks during the discussion:

- The signal distribution should be better to be plotted for each APVs using different cuts.
- Maybe using the **to-tau** cuts we will get a better signal distribution.

The next meeting will be in 2 weeks, on 28 October 2020 at 4 pm CERN time zone.
