

FCAL software and analysis meeting, 13 January 2021,

Meeting Minutes

Szymon, presented an update on FLAME testbeam analysis. He analysed the energy deposition on each sensor layer, he take into account same cuts. The plane 8 was analysed separately due to the data acquisition problem during the testbeam campaign. Still need to improve the signal selection. He obtained the maximum of the longitudinal shower distribution after 7x0. This distribution should be compare with simulation with a 5 GeV electron beam.

Wolfgang encouraged us to apply to as many conferences as possible; due to the covid situation, a lot of them will be online; I will let you know the name and the topics of the upcoming conferences.

The next meeting will be in 2 weeks, on 27 January 2021 at 4 pm CERN time zone.
