

# Status of the $e^+e^- \rightarrow \text{gamma Z}$ physics analysis

**Takahiro Mizuno**  
**2021. 4. 16.**

# Current Status

- JES calibration  
MC Jet definition is modified -> Do the same analysis which performed on the conventional jets
- Mysterious problem in making rootfiles (still unsolved)!!  
One of the NTuples (hGen) is not created.  
  
If I set the number of events in one sample, hGen is created.  
i.e. MaxRecordNumber in .xml file as finite number (e.g. 100)  
However, if I set the number of events as infinite,  
I get “.root probably not closed”.
- Physics analysis -> rootfiles for the signal channel (2f\_z\_h) may be successfully created.
