Inputs for the meeting

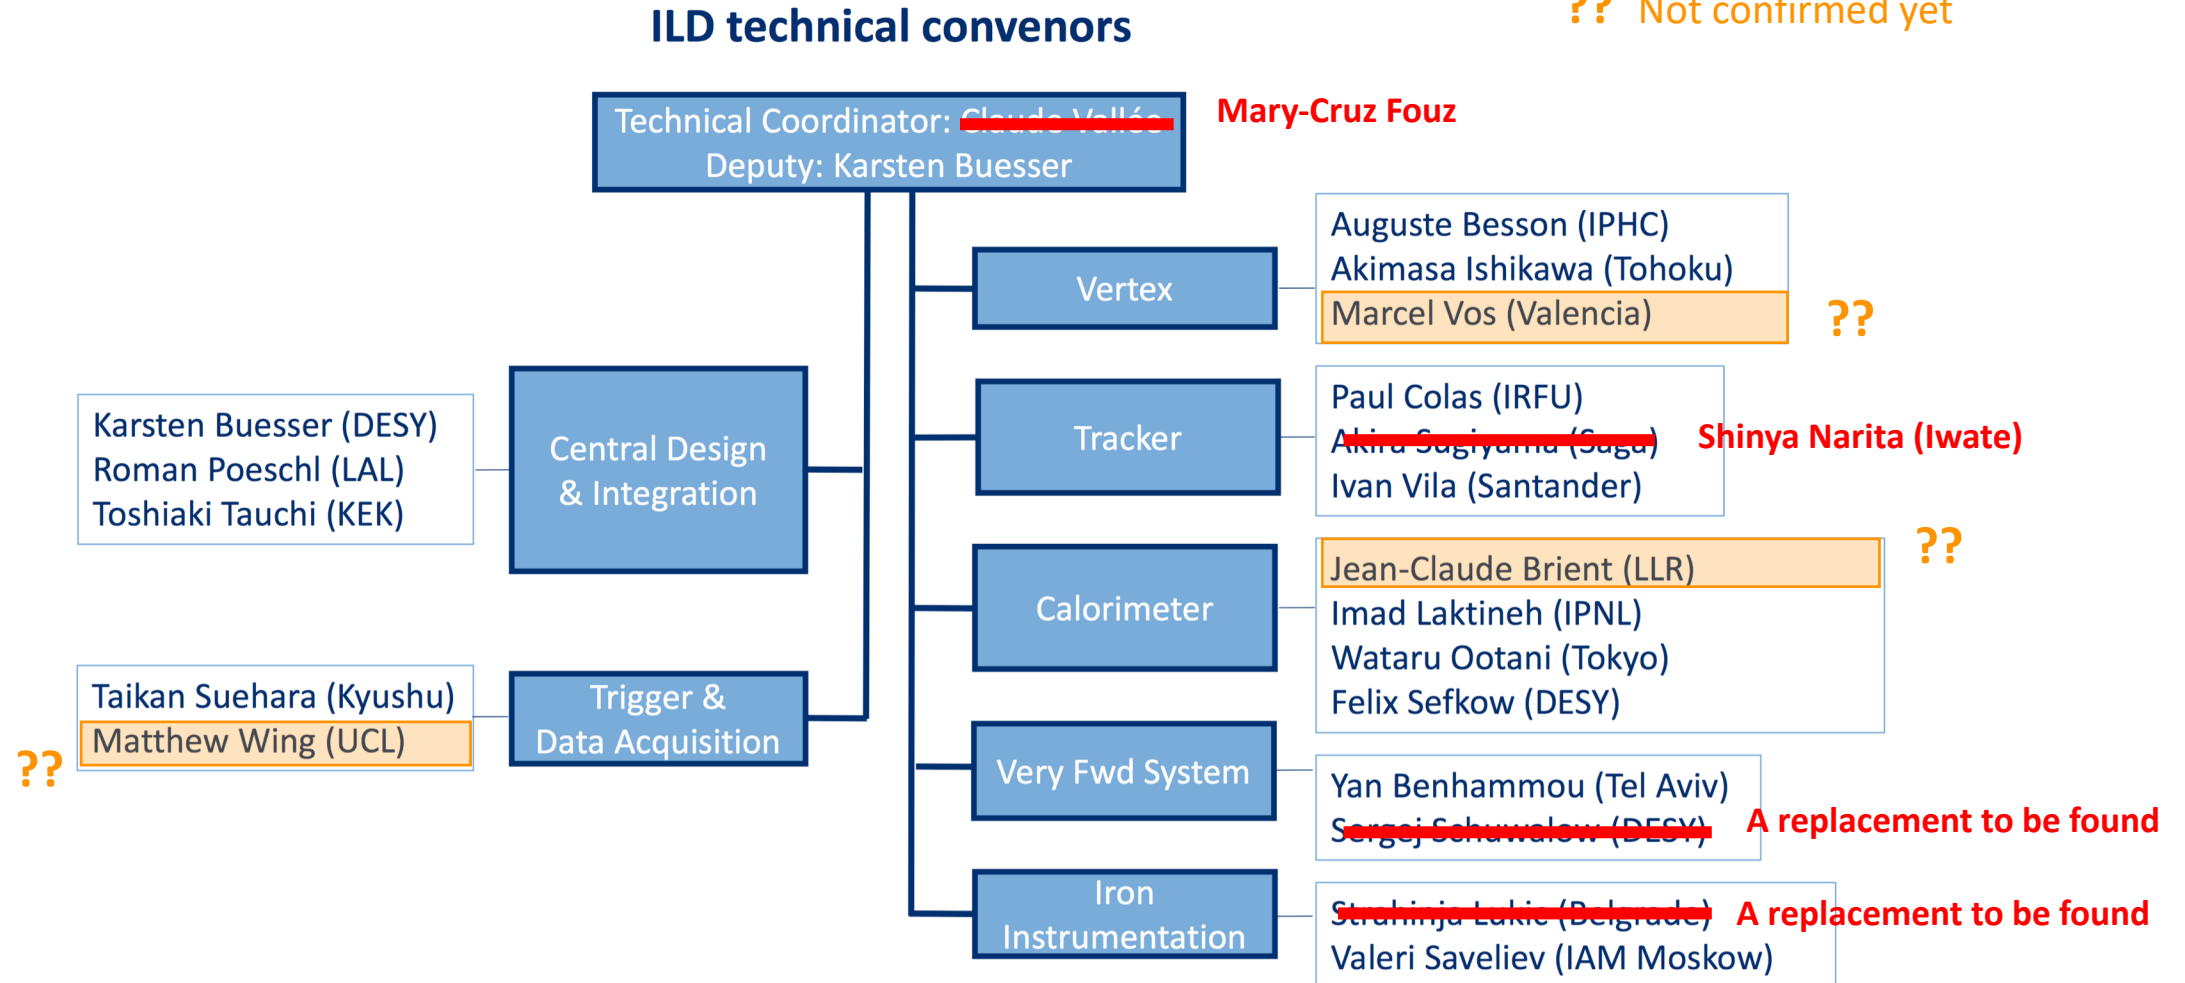

Mary-Cruz Fouz

CIEMAT

27th May 2021. ILD TC meeting

The final list of technical convenors is not yet finished

Changes with respect to last year in red
 ?? Not confirmed yet

Main goal: Start organizing the plans for the next couple of years

Where we are after the IDR

Open issues to be addressing. (detectors, simulations/optimization , tests cosmics/beams...).

Present plans

Pending things which cannot be done now due to the lack of budget/manpower

We need also to identify the uncovered parts in which new groups could make significant contributions

The IDT will call for express of interest at some point and we need to be ready for offering attractive opportunities to possible newcomers.

We should pay attention to the part related to Silicon detectors

SiD could perhaps attract easily groups experts on silicon technologies since it offers more opportunities for them

Taking into account the non-negligible possibility of ending with a single detector, ILD must be in the best place it can be

We don't have all the answers now but

Along next months I want to devote several TC meetings for discussing in depth each of the subsystems: Tracker; Vertex, Calorimeters, VF, Muons

Thursday 3rd June: 13:45 – 15:15 (90 minutes)

Draft Agenda

A general talk with organization, status and plans. Mary-Cruz
Integration issues. Karsten ~15 minutes + discussion
Engineering studies. Felix/Roman. ~20 minutes + discussion

Individual subdetectors:
Tracker; Vertex, Calorimeters, VF, Muons

Either single talks either include the information in the general talk
To be decided today
