

Minutes of WP-meeting 351

Attendance:

Zoom: Yumi Aoki, Paul Colas, Serguei Ganjour, Leif Jönsson, Jochen Kaminski, Uwe Krämer, Shinya Narita, Tomohisa Ogawa, Huirong Qi, Oliver Schäfer, Ron Settles, Jan Timmermans

General News:

Jochen mentioned that there was a submission of the funding request to MEXT. There are rumors, that in an email from Tatsuya Nakada to a limited circle or recipients it was announced that MEXT stated that it was too early and that the review process should restart. But as no-one could confirm this, we wait until the next WPmtg for more detailed information.

PCMAG/LP setup, test beam:

Oliver: PCMAG/TRACI/test beam area/Test beam schedule:

- Everything works, groups, in particular the LCTPC-Pixel group, are using the test beam.

News from the groups:

Jochen gave a short summary of the pixel test beam which is taking place since June 14th until next Sunday (June 27th). He showed some pictures of the setup and some event pictures from tracks in $B = 0.5$ T and $B = 1$ T at short drift distances.

Huirong said that they are currently analyzing the data they had taken and that more data will be taken soon with the laser setup at IHEP to study also dE/dx . Regarding the CEPC, there are no news, but maybe something will be discussed in the next Chinese high energy physics meeting in July. There are two competing projects, the CEPC and a new τ/c -factory.

Paul said that everything for their test beam is prepared, that detector had been sent to DESY, has arrived and the boxes are sitting in the test beam hall. The group will arrive on Sunday afternoon, do the paperwork on Monday morning and then start opening the boxes and setting up the detector.

AOB:

The next workpackage meeting will take place on July 8th.
