

Minutes of WP-meeting 353

Attendance:

Zoom: Paul Colas, Jochen Kaminski, Ron Settles, Jan Timmermans, Maxim Titov

General News:

Maxim said, that Alain will give the presentation at the EPS next week. LCTPC has gotten a poster presentation at the IEEE NSS/MIC and Huirong will prepare and present it. Maxim will submit an abstract to the Lepton-Photon Conference, which will take place in January 2022.

Uli Einhaus has also a presentation next week at the EPS on 'PID at colliders'.

News from the groups:

Paul mentioned that RECFA is visiting France at the beginning of September.

Jan told that he is scanning the events from the pixelTPC test beam. He has found many interesting events, which can either not be seen by pads or which are usually not recorded, if a triggered readout is used instead of the data driven readout of Timepix3. Many of these events are either scattering events or showers from initiated by the magnet wall. He will make a some slides and show these events in one of the upcoming WPmtgs. In general this technical exercise is done to help the reconstruction and analysis at a later point.

AOB:

The next workpackage meeting will take place on August 12th.
