

FCAL software and analysis meeting, 14 July 2021,

Meeting Minutes

There were no presentations at today's meeting. We discussed a bit about the structure of **Szymon's** presentation at the EPS-HEP conference. **Bohdan** agreed to send him some graphs with backscattering results obtained with 2016 data (comparisons between experimental data and MC simulations). Also **Alina** will compare her latest results with Szymon's data. **Wolfgang** proposed to ask if the students at JINR Dubna have new results regarding the analysis of the experimental data in 2020. **Itamar** is considering to make an update to the MC simulation software and use it for the 2020 beam test.

Cory has made progress on the calibration of APVs. His preliminary results will be presented next Wednesday.

Next Wednesday, July 21, there will be a rehearsal meeting for Szymon before the EPS conference.
