

# Jet Energy Scale Calibration using $e^+e^- \rightarrow \gamma Z$ process

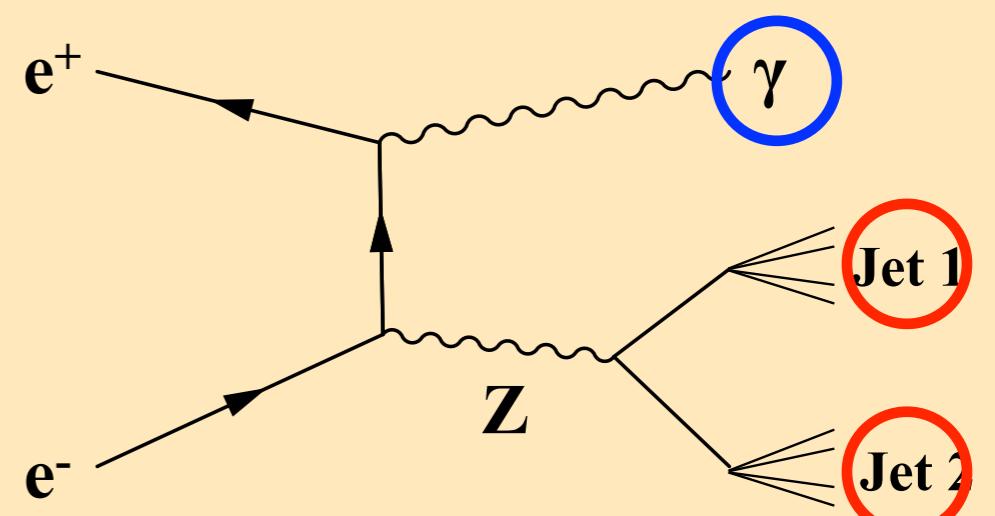

Takahiro Mizuno  
SOKENDAI

# Recent progress

- The results using **DBD samples** were reported at the ILD group meeting held on 13/10/2020. Please look at <https://agenda.linearcollider.org/event/8657/> for the detail.
- The new results using **mc-2020 samples** and differences were reported at the S&A group meeting held on 28/07/2021. <https://agenda.linearcollider.org/event/9339/>

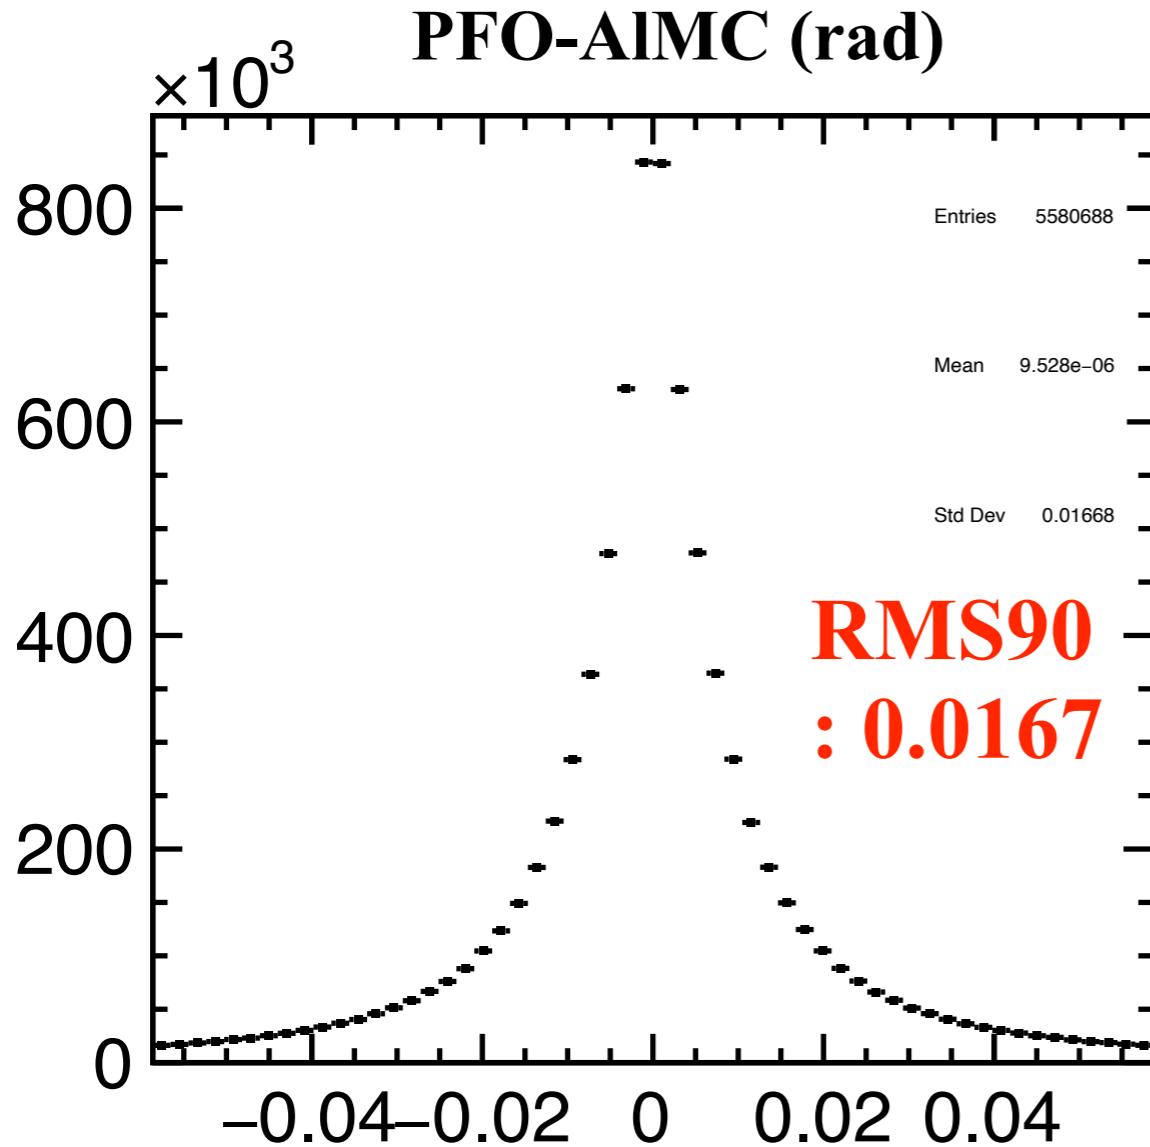

## Jet Energy Scale Calibration

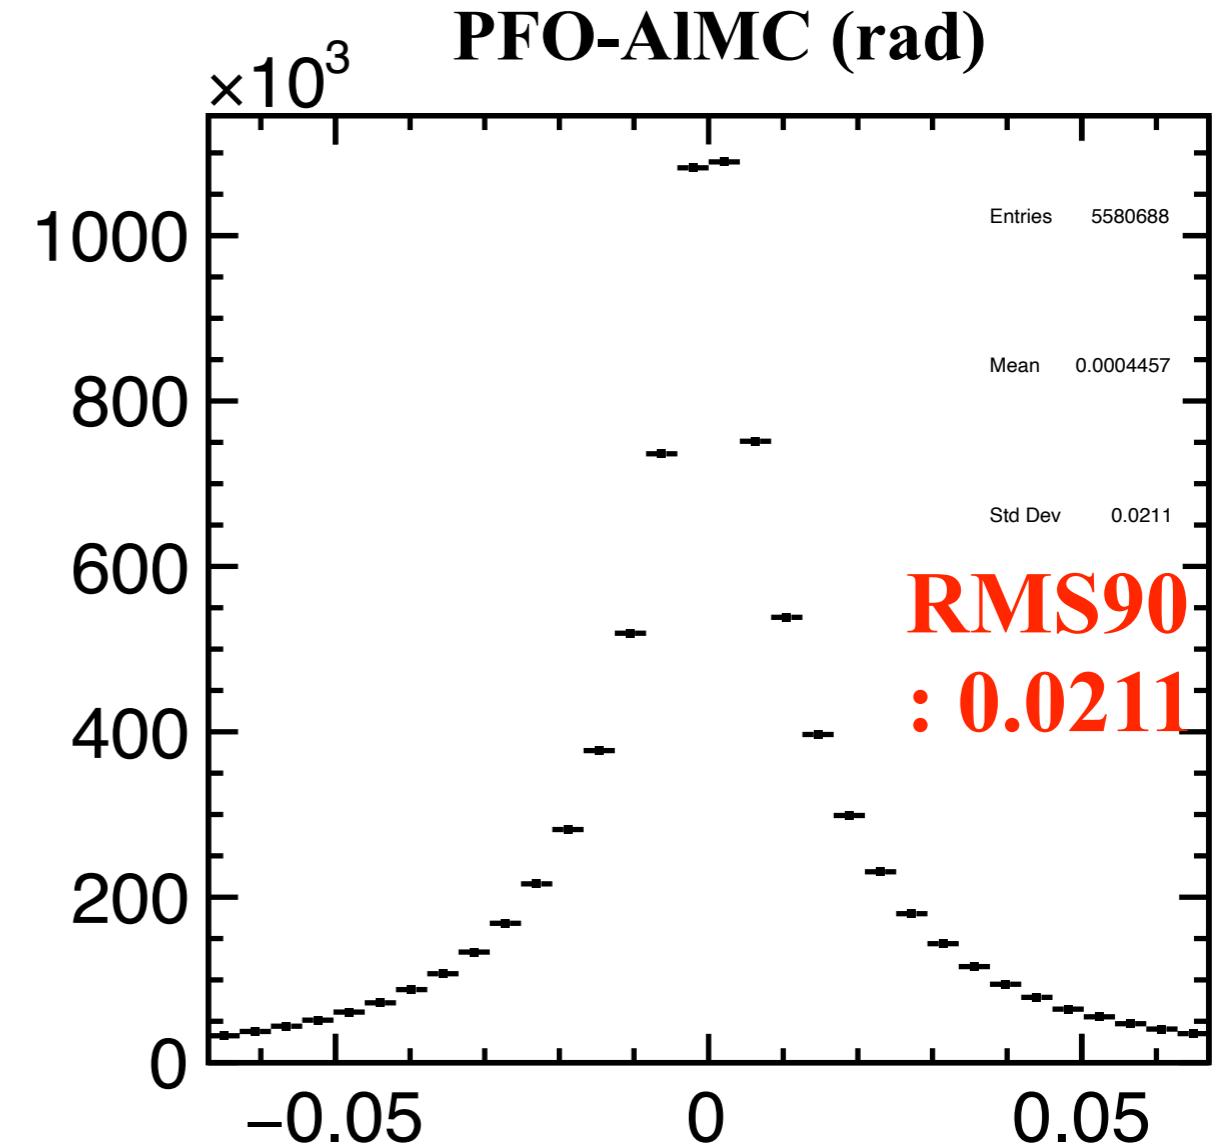

# Input Variables Correctness

eLpR Samples  
MC Cut:  
Correct photon selection  
Method 3 has answer

Theta

Phi

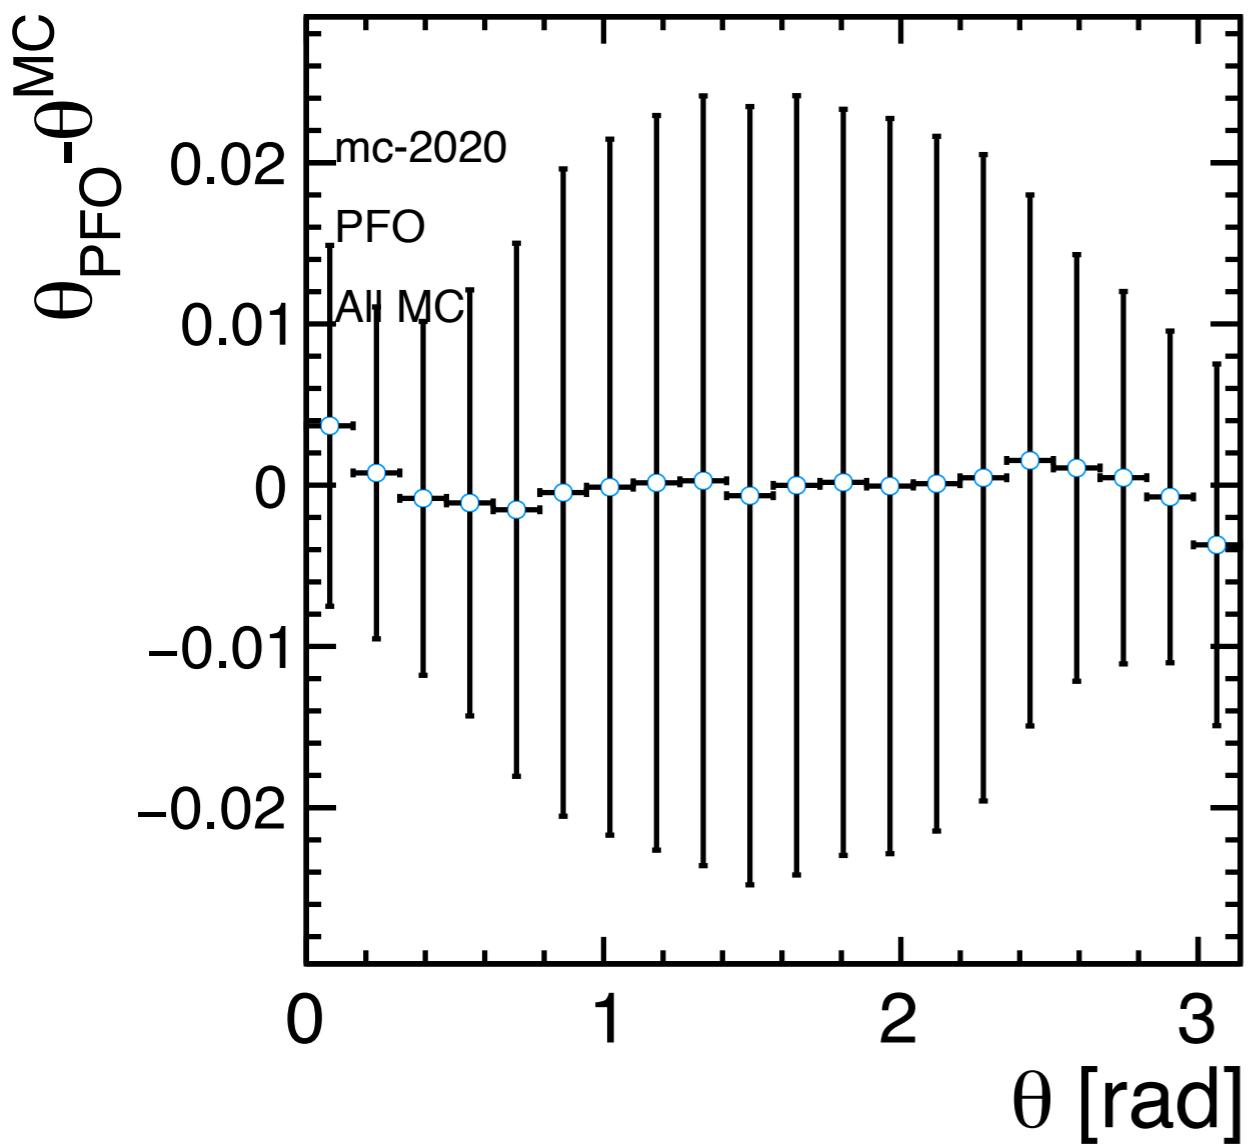

Both have ~0.02 rad RMS90.

# Abs. Differences

**Circle points are mean90 and bars are RMS90.**

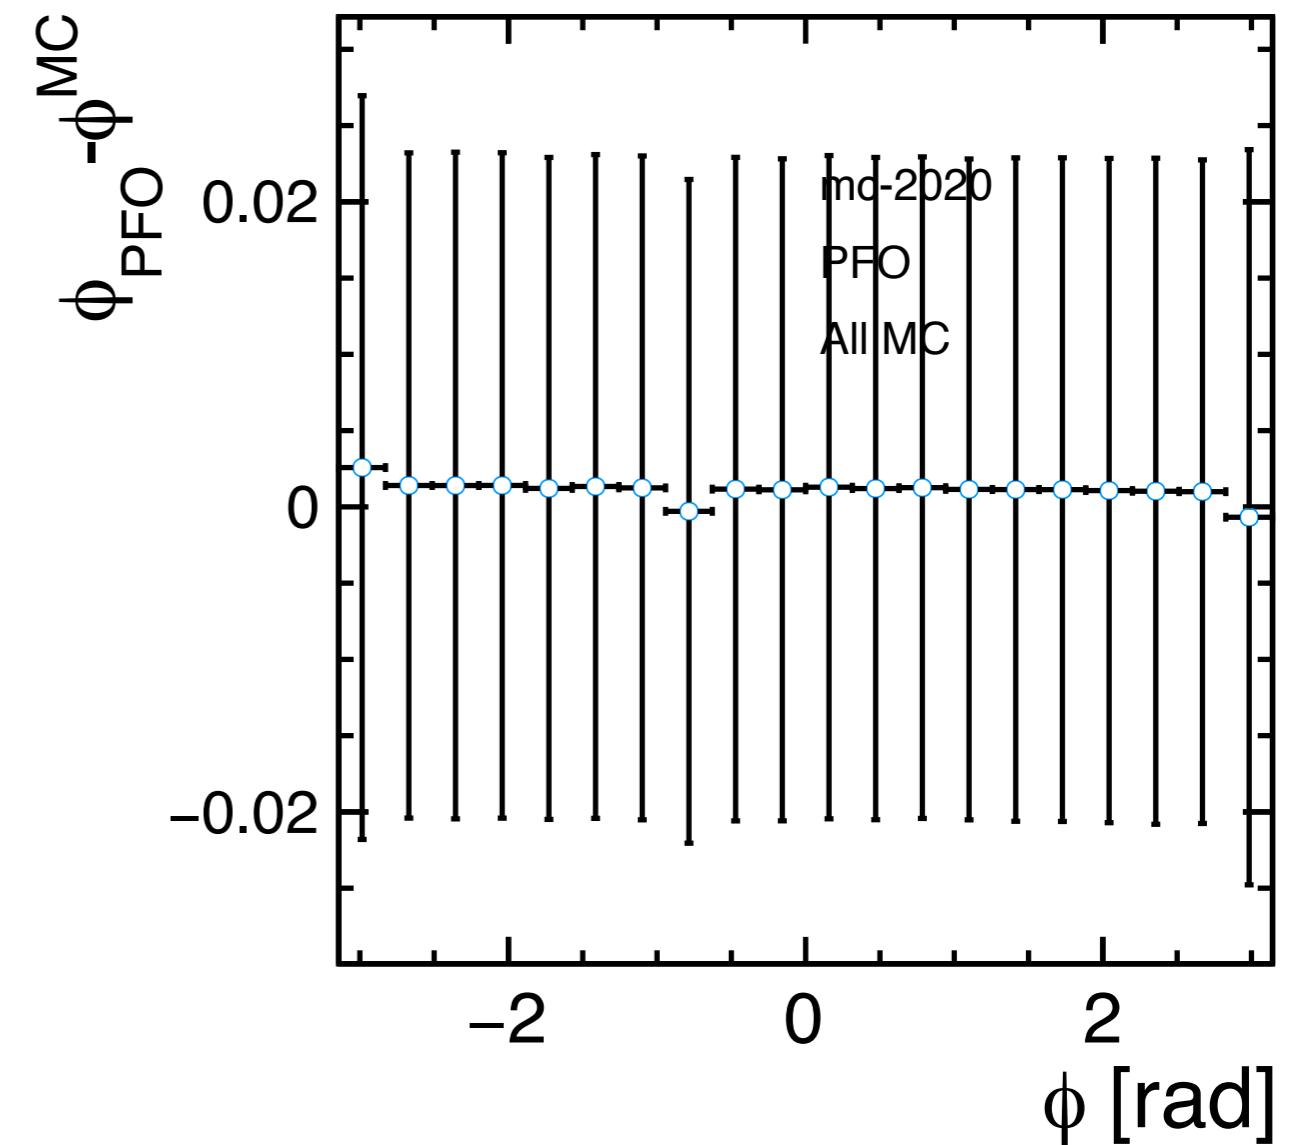

eLpR Samples  
MC Cut:  
Correct photon selection  
Method 3 has answer

Theta Difference

Bias with structure

Phi Difference

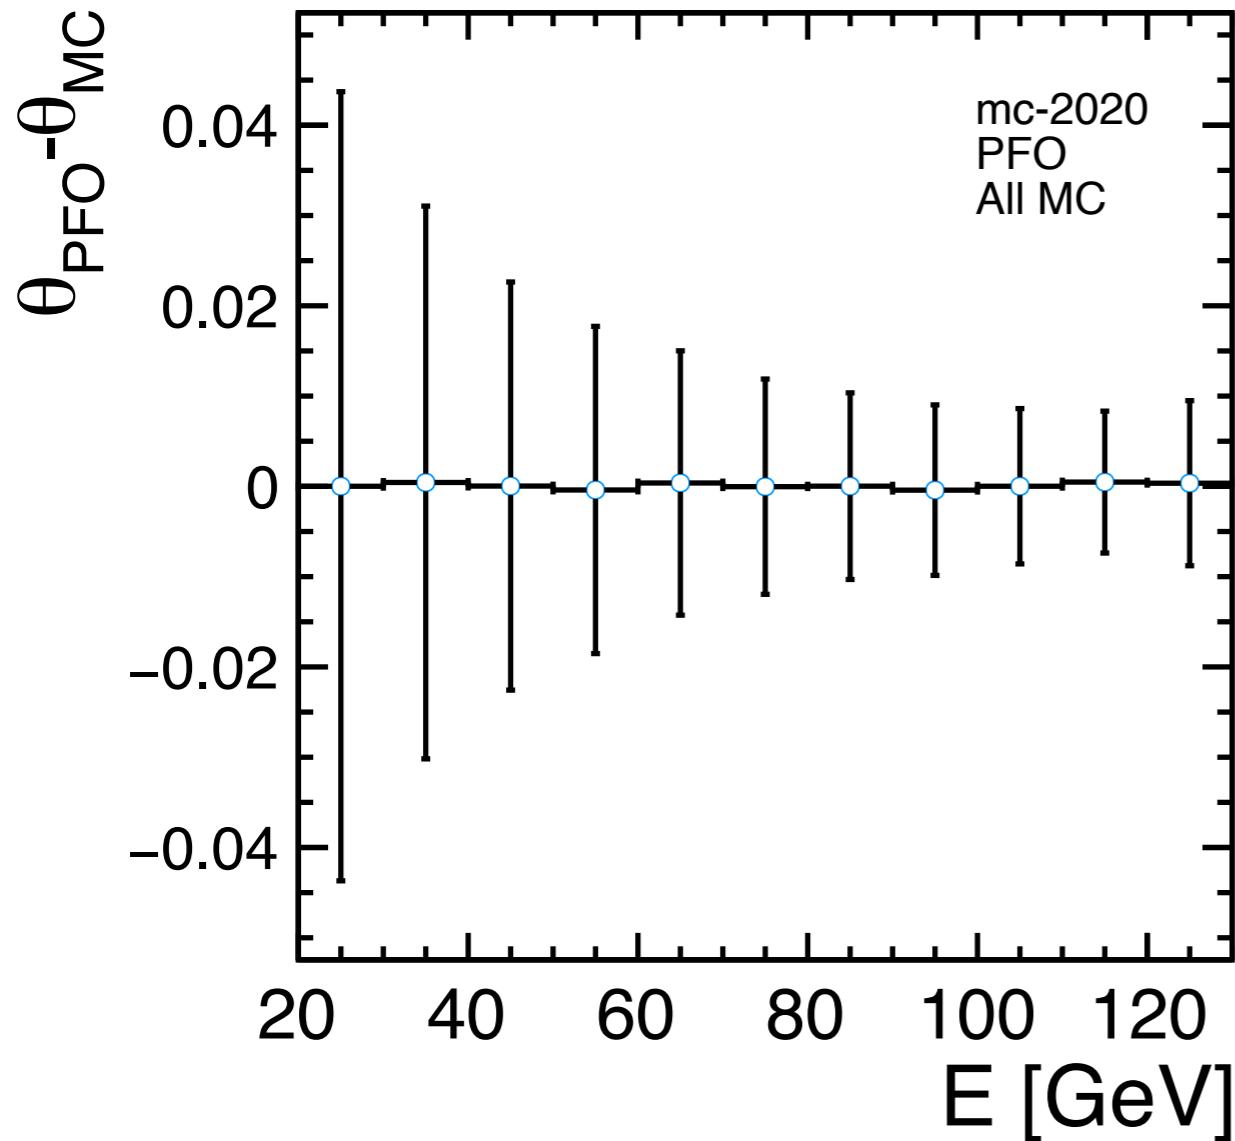

Uniformly positive bias

# Abs. Differences

Circle points are mean90 and bars are RMS90.

eLpR Samples  
MC Cut:  
Correct photon selection  
Method 3 has answer

## Theta Difference

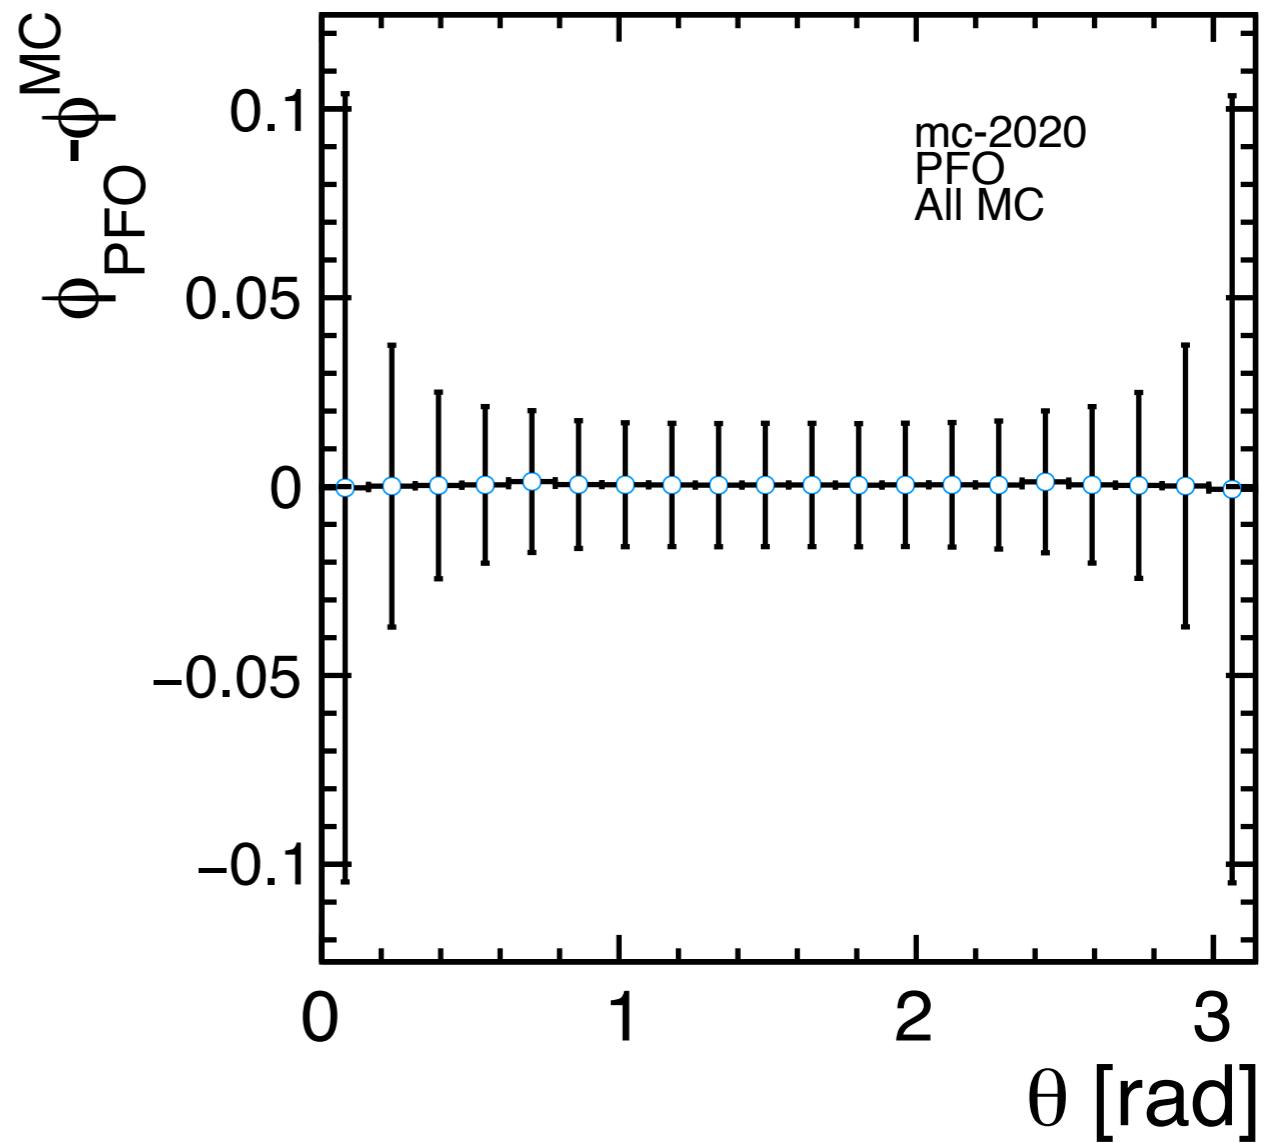

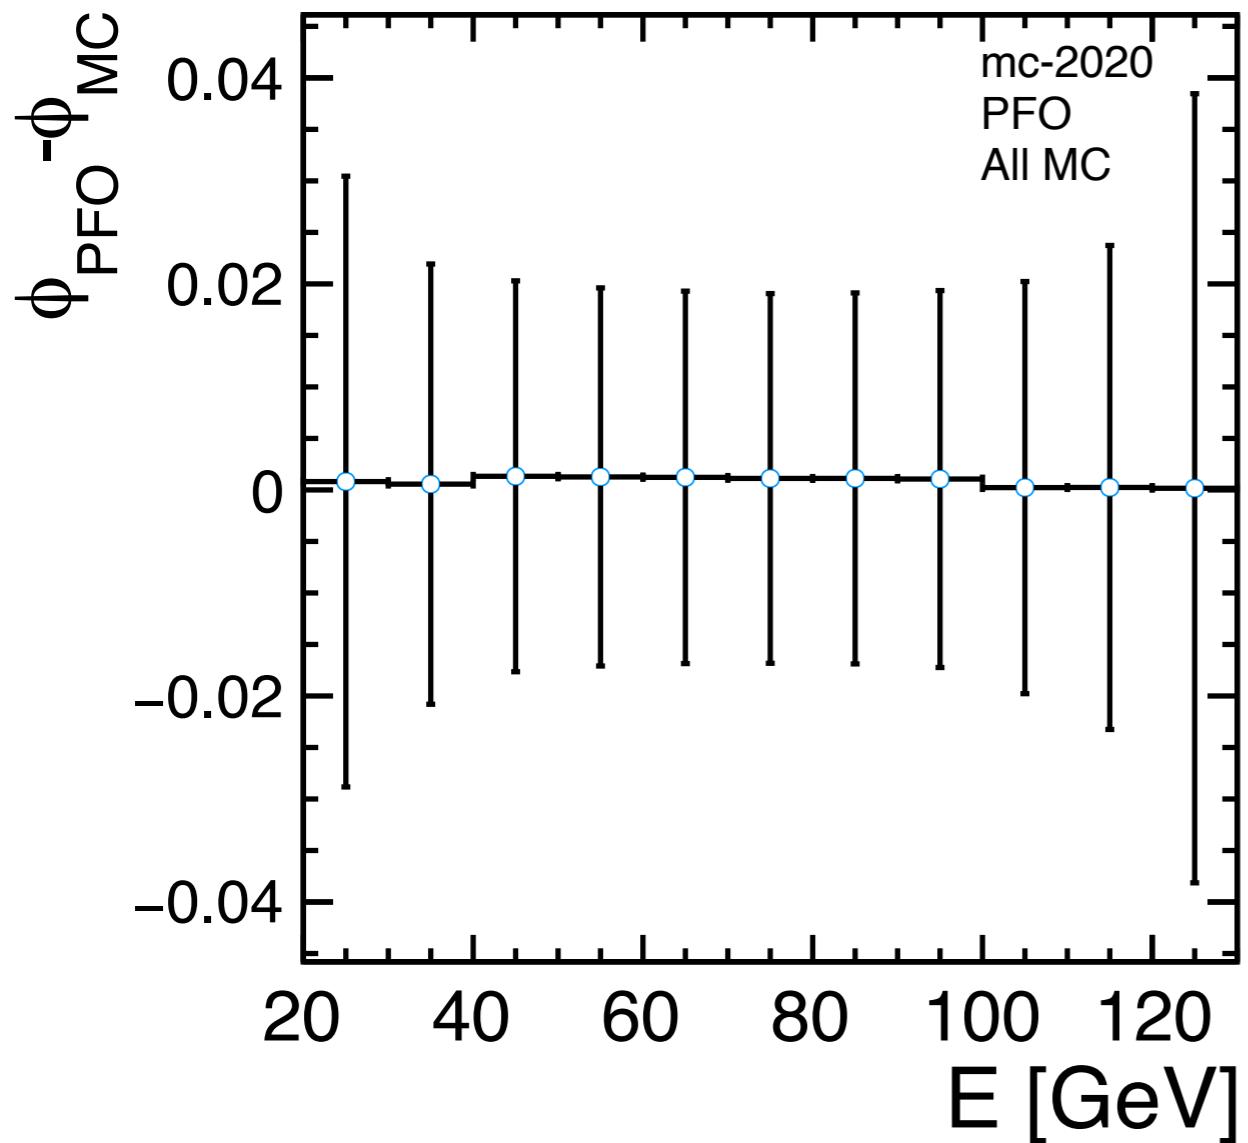

# Abs. Differences
